RISK MANAGEMENT STRATEGIES: MONITORING AND SURVEILLANCE

MONITORING AND SURVEILLANCE

Wageningen Academic Publishers **For the veterinarian, monitoring and surveillance represent the best means of ensuring sustainable animal production at a time when consumer demands reflect awareness that many of the hazards associated with food animal production can be minimised or avoided through proper management at the primary production level. Preventive medicine and quality and safety assurance programmes are primarily based on knowledge of the existing strengths and weaknesses of the clients' enterprise and their ability to enact effective intervention measures. Accordingly, the food animal veterinarian relies upon effective monitoring of current performance and herd health status both for the purpose of maximising efficiency of production and providing an assurance**

that the primary food product meets required health standards in terms of freedom from those agents of concern that have their origin on the farm. These agents include foodborne parasites, pathogenic bacteria, some of which display a resistance to antimicrobial agents, contaminants of environmental origin, as well as chemical and pharmaceutical residues. The more successful these hazards are addressed at the farm, the better the quality and safety of the final product and their marketing possibilities will be. Communication between the primary producer and the food processing industry that facilitates real-time exchange of information on these issues is essential for the practice of preventive medicine at the herd and flock level. Integrated food chain quality and safety control programmes, when linked to such monitoring and surveillance principles in regard to both human and animal health, represent the means of achieving sustainable food animal production on a global scale, in line with the conclusions of WTO and EU. Volume 3 of the "Food Safety Assurance and Veterinary Public Health" series addresses this collaborative approach. Leading international experts from academia, industry and governmental institutions have been identified to deal with the various aspects of this collaborative approach in monitoring and surveillance.

A HOUSE TO REMEMBER

10 RILLINGTON PLACE

Mereo Books, mereobook, mereobooks **What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In A House To Remember, she explains why.**

DESIGNING AND EVALUATING USABLE TECHNOLOGY IN INDUSTRIAL RESEARCH

THREE CASE STUDIES

Morgan & Claypool Publishers **This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not. They discuss what was learned**

over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research. Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI Research

DESIGN FOR A VULNERABLE PLANET

University of Texas Press **We inhabit a vulnerable planet. The devastation caused by natural disasters such as the southern Asian tsunami, Hurricanes Katrina and Ike, and the earthquakes in China's Sichuan province, Haiti, and Chile—as well as the ongoing depletion and degradation of the world's natural resources caused by a burgeoning human population—have made it clear that "business as usual" is no longer sustainable. We need to find ways to improve how we live on this planet while minimizing our impact on it. Design for a Vulnerable Planet sounds a call for designers and planners to go beyond traditional concepts of sustainability toward innovative new design that fosters regeneration and**

resilience. Drawing on his own and others' experiences across three continents, Frederick Steiner advocates design practice grounded in ecology and democracy and informed by critical regionalism and reflection. He begins by establishing the foundation for a more ecological approach to planning and design, adopting a broad view of ecology as encompassing human and natural, urban and wild environments. Steiner explores precedents for human ecological design provided by architect Paul Cret, landscape architect Ian McHarg, and developer George Mitchell while discussing their planning for the University of Texas campus, the Lake Austin watershed, and The Woodlands. Steiner then focuses on emerging Texas urbanism and extends his discussion to broader considerations beyond the Lone Star State, including regionalism, urbanism, and landscape in China and Italy. He also examines the lessons to be learned from human and natural disasters such as 9/11, Hurricane Katrina, and the BP oil spill. Finally, Steiner offers a blueprint for designing with nature to help heal the planet's vulnerabilities.

WOMEN IN BUDDHISM

Univ of California Press **"In seeking to explore the interrelationships between,**

and mutual influence of, varieties of sexual stereotypes and religious views of the Mahayana Buddhist tradition, Women in Buddhism succeeds in drawing our attention to matters of philosophical importance. Paul examines the 'image' of women which arise in a number of Buddhist texts associated with Mahayana and finds that, while ideally the tradition purports to be egalitarian, in actual practice it often betrayed a strong misogynist prejudice. Sanskrit and Chinese texts are organized by theme and type, progressing from those which treat the traditionally orthodox and negative to those which set forth a positive consideration of soteriological paths for women. . . . In Women in Buddhism, Diana Paul may be forcing our consideration of the problem of female enlightenment. Thus the main purport and accomplishment of her scholarship is revolutionary."—Philosophy East and West

FREUD ON THE PSYCHOLOGY OF ORDINARY MENTAL LIFE

Rowman & Littlefield Publishers **Freud, although best known for his elucidation of the unusual in human mental life, also attempted to illuminate ordinary human experience, such as peopleOs appreciation of humor, their capacity to become engrossed in fiction, and their disposition to a variety of emotional experiences, including the uncanny, the stirrings prompted by beauty, and their disposition to mourn. His insights into the everyday and his sense of where within it the productive questions lie reveal an incisiveness that defies both earlier and subsequent thought on his topics. This book works to expose that vision and to demonstrate its fertility for further inquiry. It reconstructs several of FreudOs works on ordinary mental life, tracking his method of inquiry, in particular his search for the child within the adult, and culminating in a deployment of his tools independently of his analyses. It shows how to read Freud for his insight and generativity and how to push beyond the confines of his analyses in pursuit of new lines of exploration.**
