# European Music Catalog of Scores Ceramica de Cultura Maya Et Al Toward an Aesthetics of Blindness An Interdisciplinary Response to Synge, Yeats, and Friel

**Peter Lang** *Blindness* has always fascinated those who can see. Although modern imaginative portrayals of the sightless experience are increasingly positive, the affirmative elements of these renderings are inevitably tempered and problematized by the visual predilections of the artists undertaking them. This book explores a variety of the (dis)continuities between depictions of the sightless experience of beauty by sighted artists and the lived aesthetic experiences of blind people. It does so by pressing a radical interdisciplinary reinterpretation of celebrated dramatic portrayals of blindness into service as a tool with which to probe the boundaries of the capacities of the sighted imagination while exploring the sensory detriment of our visually fixated notions of beauty. Works by J. M. Synge, W. B. Yeats, and Brian Friel are explored as a means of crafting a workable and innovative medium of theoretical and experiential exchange between the disciplines of literature, aesthetics, and disability studies. In addition to appraising previously unexamined aspects of the work of three of Ireland's most celebrated modern dramatists, this book considers the consequences for blind people of the exclusionary and prohibitive elements of traditional aesthetic theory and art education. The insights yielded will be of value to those with an interest in modern literature, differential aesthetics, visual culture, perception, and the experience of blindness.

A Bibliography

Categories--on the Beauty of  
Physics

Essential Physics Concepts and  
Their Companions in Art and  
Literature

**Categories On the Beauty of Physics is a multidisciplinary, interdisciplinary educational book that uses art, and information from a variety of disciplines to facilitate the reader's encounter with challenging material. It promotes scientific literacy, fosters an appreciation of the humanities, and encourages informed and imaginative connections between the sciences and the arts. Categories is a cooperative learning tool through which people (especially educators and students) can engage in academic and value-oriented discussions.**

Recent Themes in the Philosophy of  
Science

# Scientific Realism and Commonsense

Springer Science & Business Media Australia and New Zealand boast an active community of scholars working in the field of history, philosophy and social studies of science. Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for their work. Each volume comprises a group of thematically-connected essays edited by scholars based in Australia or New Zealand with special expertise in that particular area. In each volume, a majority of the contributors are from Australia or New Zealand. Contributions from elsewhere are by no means ruled out, however, and are actively encouraged wherever appropriate to the balance of the volume in question. Earlier volumes in the series have been welcomed for significantly advancing the discussion of the topics they have dealt with. I believe that the present volume will be greeted equally enthusiastically by readers in many parts of the world. R. W. Home General Editor Australasian Studies in History And Philosophy of Science viii ACKNOWLEDGEMENTS The majority of the papers in this collection had their origin in the 2001 Australasian Association for History, Philosophy, and Social Studies of Science annual conference, held at the University of Melbourne, where streams of papers on the themes of scientific realism and commonsense were organised.
