Envisioning PMO & Project Management Through A Juggler's Eye: Part-1

A BOOK OF DIFFERENT VISION & PERCEPTION

Amazon The Nonpareil of the Project Managers is in the way they express through their communication, planning, coordination, persuasiveness, and attitude. The Project managers are the "Jugglers" because "Jugglers" can adroitly manage multiple activities simultaneously. So, as the Project Managers are, they are the best strategist in this entire universe; apart from this, the planning and coordination of a Project Manager is always class apart. The problem with Project Managers and the Project Management Office role is that they are always treated as overhead and always underrated. To summarize, they are the underdog, who can hold the flag until the fort's last brick, but they have never been treated similarly. I have always been trying to change the leaders' mindset and thoughts through my articles so far. This book will run through all those articles and help you feel my thoughts, experience, knowledge, and perspective on Project Management and PMO. If thoughts are nurtured with the right attitude and expressed concisely, it will have immense power to change the process and the entire world. By following this principle, I have been expressing my thoughts and ideas similarly, and I could only see the difference in people's talk. Still, I am sure one-day things change on the ground of reality, whereas things will change at the forefront, not only in people's conversation. I hope this book will nurture your thoughts and get you the exact feel of my thoughts. Lastly, I hope this book will help the aspiring PM's and PMO's in the right way to groom them and present them in a way where you will not become a Project manager, but you can also become a front runner for a future great leader; you can become an influencer.

Job Winning Answers to 105 Trickiest Interview Questions

Be #1 Choice for the Recruiter

Booktango "What are your weaknesses?" is the most commonly asked interview question but what's common does not necessarily mean to be simple. Neither can you tell your weakness nor can you say that you suffer with none. So what to say when nothing seems correct and certainly you can't leave it unanswered. This book brings together all such questions, which are specifically made to trick a candidate into a rejection, yes, a rejection. Interview is a process of elimination or rejection and not selection. An interviewer keeps rejecting until he reaches the best candidate available. But how does he do that? The answer is simple i.e. through a series of organized questions which are created after psychological and real life research and experience and trust me; no matter how good you are, if you are not prepared for each of these questions before meeting your recruiter, 95% chances are you won't be able to make it. In order to make it to your dream job, one must not only know what to say but more importantly, must also know what not to say. This book equips you with the technique to handle such questions with ease and show your recruiter that you are prepared for any challenge whatsoever. Every question is explained according to the expectation of recruiter, and the message a recruiter perceives from the wrong or improper answers along with sample answer from real life interview scenarios.

The Business Solution to Poverty

Designing Products and Services for Three Billion New Customers

Berrett-Koehler Publishers Right now the number of people living on \$2 a day or less is more than the entire population of the world in 1950. These 2.7 billion people are not just the world's greatest challenge—they represent an extraordinary market opportunity. By learning how to serve them ethically and effectively, businesses can earn handsome profits while helping to solve one of the world's most intractable problems. The key is what Paul Polak and Mal Warwick call Zero-Based Design: starting from scratch to create innovative products and services tailored for the very poor, armed with a thorough understanding of what they really want and need and driven by what they call "the ruthless pursuit of affordability." Polak has been doing this work for years, and Warwick has extensive experience in both business and philanthropy. Together, they show how their design principles and vision can enable unapologetic capitalists to supply the very poor with clean drinking water, electricity, irrigation, housing, education, healthcare, and other necessities at a fraction of the usual cost and at profit margins attractive to investors. Promising governmental and philanthropic efforts to end poverty have not reached scale because they lack the incentives of the market to attract massive resources. This book opens an extraordinary opportunity for nimble entrepreneurs, investors, and corporate executives that will result not only in vibrant, growing businesses but also a better life for the world's poorest people.

Fracture of Nano and Engineering Materials and Structures

Proceedings of the 16th European Conference of Fracture, Alexandroupolis, Greece, July 3-7, 2006

Springer Science & Business Media The 16th European Conference of Fracture (ECF16) was held in Greece, July, 2006. It focused on all aspects of structural integrity with the objective of improving the safety and performance of engineering structures, components, systems and their associated materials. Emphasis was given to the failure of nanostructured materials and nanostructures including micro- and nano-electromechanical systems (MEMS and NEMS).

Body Area Network Challenges and Solutions

Springer This book provides a novel solution for existing challenges in wireless body sensor networks (WBAN) such as network lifetime, fault tolerant approaches, reliability, security, and privacy. The contributors first discuss emerging trends of WBAN in the present health care system. They then provide possible solutions to challenges inherent in WBANs. Finally, they discuss results in working environments. Topics include communication protocols of implanted, wearable and nano body sensor networks; energy harvesting methodologies and experimentation for WBAN; reliability analysis and fault tolerant architecture for WBAN; and handling network failure during critical duration. The contributors consist of researchers and practitioners in WBAN around the world.

Mechanical Properties and Working of Metals and Alloys

Springer This book is intended to serve as core text or handy reference on two key areas of metallic materials: (i) mechanical behavior and properties evaluated by mechanical testing; and (ii) different types of metal working or forming operations to produce useful shapes. The book consists of 16 chapters which are divided into two parts. The first part contains nine chapters which describe tension (including elastic stress - strain relation, relevant theory of plasticity, and strengthening methods), compression, hardness, bending, torsion - pure shear, impact loading, creep and stress rupture, fatigue, and fracture. The second part is composed of seven chapters and covers fundamentals of mechanical working, forging, rolling, extrusion, drawing of flat strip, round bar, and tube, deep drawing, and high-energy rate forming. The book comprises an exhaustive description of mechanical properties evaluated by testing of metals and metal working in sufficient depth and with reasonably wide coverage. The book is written in an easy-to-understand manner and includes many solved problems. More than 150 numerical problems and many multiple choice questions as exercise along with their answers have also been provided. The mathematical analyses are well elaborated without skipping any intermediate steps. Slab method of analysis or free-body equilibrium approach is used for the analytical treatment of mechanical working processes. For hot working processes, different frictional conditions (sliding, sticking and mixed sticking-sliding) have been considered to estimate the deformation loads. In addition to the slab method of analysis, this book also contains slip-line field theory, its application to the static system, and the steady state motion. Further, this book includes upper-bound theorem, and upper-bound solutions for indentation, compression, extrusion and strip drawing. The book can be used to teach graduate and undergraduate courses offered to students of mechanical, aerospace, production, manufacturing and metallurgical engineering disciplines. The book can also be used for metallurgists and practicing engineers in industry and development courses in the metallurgy and metallic manufacturing industries.
