This workbook is a collection of question and problems that are representative of the topics covered in the textbook. The format of this workbook is based on individual chapters of the textbook. The questions and problems associated with each chapter begin with a one-page review of the definitions, units, and simple relationships appropriate to that chapter. Each review, in the form of questions and one-step problems, is followed by more comprehensive problems, formatted one to a page. Each problem is stated at the top of a page, and the student is provided space to execute each element of the problem-solving procedure. A detailed solution to each problem is presented in the same form, such as in the format of the problem solving procedure, on the reverse side of the page. The solution page often

includes comments and suggestions appropriate to the specific type of problem being considered. The opening chapters include discussions on particle kinematics and dynamics; applications of Newton's laws; and work, power, and energy. The subsequent chapters explore the concepts of momentum, collisions, rotational motion, oscillations, mechanics of fluids, heat, and thermodynamics. Other chapters examine the principles of electric charge, electric fields, electric potential, capacitance, current, resistance, direct-current circuits, magnetic fields, and electromagnetic oscillations. The remaining chapters deal with wave motion, sound, geometric and physical optics, special relativity, early quantum physics, and wave mechanics. This workbook will be of great benefit to physics teachers and students.
