Carl Rogers on Encounter Groups

Carl Rogers coined the term, 'The Basic Encounter Group' to identify encounter groups that operated on the principles of the person-centered approach. It is the contention that the person-centered Basic Encounter Group is quite unique and, in fact, offers a different paradigm for group therapy. Indeed, the application of the premises of the person-centered approach in group therapy requires a re-examination of many of the usual presuppositions about group function. This includes presuppositions about leader target population, size of group, establishment of goals and ground rules, and facilitator behavior.

Interdisciplinary Inquiry in Teaching and Learning

Prentice Hall For a graduate course in Elementary or Middle School Methods, or as a supplement in these courses. Unique to this market, this book's philosophical and theoretical premises value interdisciplinary themes as vehicles for inquiry learning by students in upper elementary grades. It defines inquiry learning as a means for teachers and students to develop study topics into themes, formulate questions about the thematic content, find and engage various resources to explore questions, and take big ideas from their findings. The authors suggest ways that current and future teachers can apply the text's instructional ideas to discover their own personal styles of thematic curriculum development through interdisciplinary inquiry.

Institutional Effects as Determinants of Learning

Outcomes

Exploring State Variations in Mexico

World Bank Publications This paper uses the OECD's Program for International Student Assessment student-level achievement database for Mexico to estimate state education production functions, controlling for student characteristics, family background, home inputs, resources, and institutions. The authors take advantage of the state-level variation and representative sample to analyze the impact of institutional factors such as state accountability systems and the role of teachers' unions in student achievement. They argue that accountability, through increased use of state assessments, will improve learning outcomes. The authors also cast light on the role of teachers' unions, namely their strength through appointments to the school and relations with state governments. The analysis shows the importance of good relations between states and unions. Furthermore, it demonstrates that accountability systems are cost-effective measures for improving outcomes.

Re-reading Education Policies

A Handbook Studying the Policy Agenda of the 21st Century

Brill - Sense *This book collects studies with a 'critical education policy orientation', and presents itself as a handbook of matters of public concern. The term 'critical' does not refer to the adoption of a particular theoretical framework or methodology, but rather it refers to a very specific ethos or way of relating to the present and the belief that the future should not be the repetition of the past. This implies a concern about what is happening in our societies today and what could or should be happening in the future. As a consequence, the contributors to the book rely on a general notion of public policy that takes on board processes, practices, and discourses at a variety of levels, in diverse governmental and non-governmental contexts, and considers the relation of policy to power, to politics and to social regulation. Following the detailed introduction that aims at picturing the landscape of studies with a 'critical education policy orientation', the book presents re-readings of six policy challenges; globalization, knowledge society, lifelong learning, equality/democracy/social inclusion, accountability/control/efficiency and teacher professionalism. It seeks to contextualise these in relation to issues of current global concern at the start of the 21st century. Despite the diversity of approaches, this collection of critical education policy studies shares a concern with what could be called 'the public, and its education, ' and represents a snapshot of education policy research at a particular time.*

Vital Questions Facing Disability Studies in Education

Peter Lang *Disability studies in education is a provocative and innovative field of social inquiry that challenges standard ways of thinking about disability in education, practices that serve to exclude disabled people from equal educational opportunity, and policies*

that support or drive inequality. This book brings together the best disability studies in education scholars to address the pressing questions facing the field. It provides an introduction to the field for the newcomer, a sharp challenge to the status quo in special and general education, and a map to understanding the serious disability issues confronting education today.

The Making of Modern Colombia

A Nation in Spite of Itself

Univ of California Press *Colombia's status as the fourth largest nation in Latin America and third most populous—as well as its largest exporter of such disparate commodities as emeralds, books, processed cocaine, and cut flowers—makes this, the first history of Colombia written in English, a much-needed book. It tells the remarkable story of a country that has consistently defied modern Latin American stereotypes—a country where military dictators are virtually unknown, where the political left is congenitally weak, and where urbanization and industrialization have spawned no lasting populist movement. There is more to Colombia than the drug trafficking and violence that have recently gripped the world's attention. In the face of both cocaine wars and guerrilla conflict, the country has maintained steady economic growth as well as a relatively open and democratic government based on a two-party system. It has also produced an impressive body of art and literature. David Bushnell traces the process of state-building in Colombia from the struggle for independence, territorial consolidation, and reform in the nineteenth century to economic development and social and political democratization in the twentieth. He also sheds light on the modern history of Latin America as a whole.*

Development with Identity

Community, Culture and Sustainability in the Andes

CABI *Throughout Latin America, indigenous peoples are demanding that development must address local priorities, including ethnic identity. Simultaneously, sustainability scientists need to conduct place-based research on the interaction between environment and society that will have global relevance. This book reports on a 6 year interdisciplinary research project on natural resource management in Cotacachi, Ecuador, where scientists and indigenous groups learnt to seek common ground. The book discusses how local people and the environment have engaged each other over time to create contemporary Andean landscapes. It also explores*

human-environment interaction in relation to biodiversity, soils and water, and equitable development. This book will be of significant interest to sociologists, anthropologists, economists and sustainability scientists researching environment and agriculture in rural communities.

The Digital Divide

The Internet and Social Inequality in International Perspective

Routledge *This book provides an in-depth comparative analysis of inequality and the stratification of the digital sphere. Grounded in classical sociological theories of inequality, as well as empirical evidence, this book defines 'the digital divide' as the unequal access and utility of internet communications technologies and explores how it has the potential to replicate existing social inequalities, as well as create new forms of stratification. The Digital Divide examines how various demographic and socio-economic factors including income, education, age and gender, as well as infrastructure, products and services affect how the internet is used and accessed. Comprised of six parts, the first section examines theories of the digital divide, and then looks in turn at: Highly developed nations and regions (including the USA, the EU and Japan); Emerging large powers (Brazil, China, India, Russia); Eastern European countries (Estonia, Romania, Serbia); Arab and Middle Eastern nations (Egypt, Iran, Israel); Under-studied areas (East and Central Asia, Latin America, and sub-Saharan Africa). Providing an interwoven analysis of the international inequalities in internet usage and access, this important work offers a comprehensive approach to studying the digital divide around the globe. It is an important resource for academic and students in sociology, social policy, communication studies, media studies and all those interested in the questions and issues around social inequality.*

He never should have been able to humiliate her in front of everyone. Losing the game means taking the dare: a dare to serve Manson for the entire night as his slave. It's a dare that Jessica's pride - and curiosity - won't allow her to refuse. What ensues is a dark game of pleasure and pain, fear and desire. Is it only a game? Only revenge? Only a dare?
