VALUING THE INNOVATION POTENTIALS OF FIRMS

WHAT THEORY SUGGESTS, PRACTITIONERS DO, AND BOTH IMPLIES FOR EXISTING THEORY

Springer **Jan Buchmann focuses on the valuation of a firm's innovation potential based on that firm's position in its lifecycle. Compared to existing research, the author does not center his research exclusively on mathematical valuation methodologies. Instead, the author compares collected valuation input data, data interpretation approaches, and valuation methodologies suggested by theory with the ones applied by experienced valuation experts in a very structured way by applying a firm typology. Subsequently, he uncovers essential differences between theory and practice and derives theory-extending hypotheses from the uncovered differences.**

INTERNATIONAL ENCYCLOPEDIA OF CIVIL SOCIETY

Springer Science & Business Media **Recently the topic of civil society has generated a wave of interest, and a wealth of new information. Until now no publication has attempted to organize and consolidate this knowledge. The International Encyclopedia of Civil Society fills this gap, establishing a common set of understandings and terminology, and an analytical starting point for future research. Global in scope and authoritative in content, the Encyclopedia offers succinct summaries of core concepts and theories; definitions of terms; biographical entries on important figures and organizational profiles. In addition, it serves as a reliable and up-to-date guide to additional sources of information. In sum, the Encyclopedia provides an overview of the contours of civil society, social capital, philanthropy and nonprofits across cultures and historical periods. For researchers in nonprofit and civil society studies, political science, economics, management and social enterprise, this is the most systematic appraisal of a rapidly growing field.**

ECONOMIC FOUNDATIONS FOR FINANCE

FROM MAIN STREET TO WALL STREET

Springer Nature This book provides readers with essential concepts from financial economics for an integrated study of the financial system and the real economy. It discusses how long-term market prices are determined and affected by population growth, technological progress and non-renewable resources. The meaning of market prices is examined from the perspective of households and from the perspective of firms. The book therefore connects different fields of finance, which usually focus only on either the households' side or the firms' side.
