Contributors: Diane Blundell, Abe Ginourie, Joy Parkes, Ruth Sadik, Pat Talbot, Janine Upton, Traci Whitfield, Christine Whitney-Cooper, Debbie Wyatt. "The book offers a unique and engaging approach to an important subject that most students find daunting. Realistic case scenarios are used as a catalyst to introduce information and concepts that underpin practice. The presentation style supports the active participation of the student with the inclusion of questions at the beginning of each topic offering a platform to explore key areas whilst referring to the scenario. I highly recommend it to pre-registered student nurses." Kris Paget, Senior Lecturer, Faculty of Health, Social Work and Education, Kingston University, UK "This collection of case studies provides a unique and user friendly guide to commonly

seen pharmacological therapies and treatment options across the lifespan. The case studies have been carefully selected to provide the diverse care needs of complex disease processes in a person centred way. Each case study is relevant to the role of the Nurse and will provide essential and core information whether nurses are working in either a medical or surgical clinical setting. Government Health Care Directives provide the essential clinical evidence based theory necessary to promote medicine adherence and each chapter provides the relevant pathophysiology which is essential to underpin the safe administration of medication therapies. The role of the nurse in medicine management with respect to patient education and the professional responsibilities of monitoring and evaluating complex medication therapies is presented in each case study. This provides an holistic approach to the care of patients receiving complex medication therapies." Barry Ricketts, Senior Lecturer, Adult Nursing, Oxford Brookes University, UK Lehne's Pharmacology for Nursing Care E-Book *Elsevier Health Sciences* Trust Lehne's to make pharmacology more approachable! Known for its clear explanations of drug prototypes and how they work, Lehne's Pharmacology for Nursing Care, 11th Edition provides a solid understanding of key drugs and their implications for nursing care. A perennial student favorite, this book simplifies complex pharmacology concepts, using large and small print to distinguish need-to-know drug content from the material that's merely nice to know. It also includes in-depth coverage of physiology, pathophysiology and drug therapy. Written by noted nursing educators Jacqueline Rosenjack Burchum and Laura Rosenthal, this text helps you understand and apply pharmacology principles as opposed to simply memorizing drug facts. Clear, engaging writing style simplifies complex concepts, making difficult pharmacology content not only understandable but actually enjoyable. Prototype Drugs approach focuses on representative drugs that characterize all members of a given drug group, so that you can apply your understanding to related drugs currently on the market as well as drugs that will be released in the future. Nursing implications of drug therapy are integrated throughout the text to reinforce the integral relationship between drug therapy and nursing care, and also summarized in Summary of Major Nursing Implications sections at the end of chapters. Special Interest Topic boxes examine the everyday impact of pharmacology with vignettes including Medication Overuse Headache: Too Much of a Good Thing and Antibiotics in Animal Feed: Dying for a Hamburger and Chicken Nuggets. Large print highlights essential, need-to-know information, and small print indicates nice-to-know information. Safety Alerts call out important safety concerns related to contraindications, adverse effects, and more.
