LEARNING TO READ THE EARTH AND SKY

EXPLORATIONS SUPPORTING THE NGSS, GRADES 6-12

NSTA Press Is it time to refresh the way you think about teaching Earth science? Learning to Read the Earth and Sky is the multifaceted resource you need to bring authentic science—and enthusiasm—into your classroom. It offers inspiration for reaching beyond prepared curricula, engaging in discovery along with your students, and using your lessons to support the Next Generation Science Standards (NGSS).

The book provides • examples of Earth science labs and activities you and your students can do as co-investigators; • insights into student expectations and misconceptions, plus ideas for inspiring true investigation; • stories of real scientific discovery translated for classroom consideration; • exploration of how you can mentor students as a teacher-scholar; and • guidance on how to translate the sweeping core ideas of the NGSS into specific examples students can touch, see, and experience. The authors of Learning to Read the Earth and Sky are husband-and-wife educators who promote science as something to figure out, not just something to know. They write, "It is our hope that readers will find our book short on 'edu-speak,' long on the joy of doing science, and full of stories of students, classrooms, scientists, and Earth and sky."

STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES

A PATH FORWARD

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full

account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

SCIENCE AND EARTH HISTORY

THE EVOLUTION/CREATION CONTROVERSY

In this comprehensive treatment of the ongoing conflict between creationists and evolutionary scientists, well-known geomorphologist Arthur Strahler carefully examines creationists' claims of scientific evidence for the six-day divine creation of the universe, followed by the catastrophic flood of Noah, as claimed in Genesis. The creationists' arguments are examined and evaluated against the findings of mainstream science in the fields of cosmology, astronomy, geophysics, geology, paleontology, and evolutionary biology. Updated with a new preface and responses to recent attacks on evolutionary theory, *Science and Earth History* can serve as both a popular overview of earth history and as a scholarly anecdote to the fictions of creationism once again finding their way into classrooms and universities. Strahler illuminates the controversy by reviewing the philosophy, methodology, and sociology of empirical science, as contrasted with the belief systems of religion and pseudoscience. The author also includes lucid criteria for distinguishing science from pseudoscience, and reviews the great discoveries and developments in science that point to the evolution of life over the earth's three-billion-year history. Arthur Strahler was professor and chairman of geomorphology at the Department of Geology of Columbia University.
