Insurance and Behavioral Economics

Improving Decisions in the Most Misunderstood Industry

Cambridge University Press This book examines the behavior of individuals at risk and insurance industry decision makers involved in selling, buying and regulation. It compares their actions to those predicted by benchmark models of choice derived from classical economic theory. Where actual choices stray from predictions, the behavior is considered to be anomalous. Howard C. Kunreuther, Mark Pauly and Stacey McMorro attempt to understand why these anomalies occur, in many cases using insights from behavioral economics. The authors then consider if and how such behavioral anomalies could be modified to improve individual and social welfare. This book describes situations in which both public policy and the insurance industry's collective posture need to change. This may require incentives, rules and institutions to help reduce both inefficient and anomalous behavior, thereby encouraging behavior that will improve individual and social welfare.

Master Manipulator

The Explosive True Story of Fraud, Embezzlement, and Government Betrayal at the CDC

Skyhorse The explosive true story of fraud, embezzlement, and government betrayal. In 2000, the US Centers for Disease Control (CDC) carried out a secret mission to bury, skew, and manipulate data in six vaccine safety studies, in a coordinated effort to control the message that "vaccines do not cause autism." They did so via secret meetings and backtesting health-care data. The CDC invested tens of millions of dollars in a foreign health-care data analytics startup run by Danish scientist Poul Thorsen, a move to ensure that no link ever surfaced. But fate had other ideas. The agency soon learned it couldn't control Thorsen. In 2011, the US Justice Department indicted him for the theft of more than \$1 million of CDC grant money. Master Manipulator exposes the CDC's hidden agenda for the cover-up. Influenced by Big Pharma money, future high-paying jobs, and political lobbyists, CDC executives charted a course different than what the findings of earlier vaccine safety studies revealed. The CDC needed an outsider to "flatten" the results of the data, while building an exit strategy: a fall guy in case the secret plan was exposed. Thorsen fit the bill nicely, conducting studies overseas. But the CDC's plan backfired, as Thorsen took the money to the bank and the power went to his head. It would take years for his fraud scheme—funneling CDC grant money to a Danish university and then back to a CDC bank account he controlled—to play out. Master Manipulator is a true story of fraud and betrayal, and an insider's view of what takes place behind the closed doors of agencies and drug companies, and with the people tasked to protect the health of American children. It's a cautionary tale of the dangers of blind trust in the government and the health-care industry.

Language, Ideology and Identity in Serial Killer Narratives

Routledge In this book, Gregoriou explores the portrayal of the serial killer identity and its related ideology across a range of contemporary crime narratives, including detective fiction, the true crime genre and media journalism. How exactly is the serial killer consciousness portrayed, how is the killing linguistically justified, and how distinguishing is the language revolving around criminal ideology and identity across these narrative genres? By employing linguistic and content-related methods of analysis, her study aims to work toward the development of a stylistic framework on the representation of serial killer ideology across factual (i.e. media texts), factional (i.e. true crime books) and fictional (i.e. novels) murder narratives. 'Schema' is a term commonly used to refer to organised bundles of knowledge in our brains, which are activated once we come across situations we have previously experienced, a 'group schema' being one such inventory shared by many. By analysing serial murder narratives across various genres, Gregoriou uncovers a widely shared 'group schema' for these murderers, and questions the extent to which real criminal minds are in fact linguistically fictionalised. Gregoriou's study of the mental functioning and representation of criminal personas can help illuminate our schematic understanding of actual criminal minds.
