## CONCEPTS OF MATTER IN SCIENCE EDUCATION

---

*Springer Science & Business Media* **Bringing together a wide collection of ideas, reviews, analyses and new research on particulate and structural concepts of matter, Concepts of Matter in Science Education** informs practice from pre-school through graduate school learning and teaching and aims to inspire progress in science education. The expert contributors offer a range of reviews and critical analyses of related literature and in-depth analysis of specific issues, as well as new research. Among the themes covered are learning progressions for teaching a particle model of

matter, the mental models of both students and teachers of the particulate nature of matter, educational technology, chemical reactions and chemical phenomena, chemical structure and bonding, quantum chemistry and the history and philosophy of science relating to the particulate nature of matter. The book will benefit a wide audience including classroom practitioners and student teachers at every educational level, teacher educators and researchers in science education. "If gaining the precise meaning in particulate terms of what is solid, what is liquid, and that air is a gas, were that simple, we would not be confronted with another book which, while suggesting new approaches to teaching these topics, confirms they are still very difficult for students to learn". Peter Fensham, Emeritus Professor Monash University, Adjunct Professor QUT (from the foreword to this book)

### **TEST EQUATING, SCALING, AND LINKING**

---

---

### **METHODS AND PRACTICES**

---

*Springer Science & Business Media* This book provides an introduction to test equating, scaling and linking, including those concepts and practical issues that are critical for developers and all other testing professionals. In addition to statistical procedures, successful equating, scaling and linking involves many aspects of testing, including procedures to develop tests, to administer and score tests and to interpret scores earned on tests. Test

equating methods are used with many standardized tests in education and psychology to ensure that scores from multiple test forms can be used interchangeably. Test scaling is the process of developing score scales that are used when scores on standardized tests are reported. In test linking, scores from two or more tests are related to one another. Linking has received much recent attention, due largely to investigations of linking similarly named tests from different test publishers or tests constructed for different purposes. In recent years, researchers from the education, psychology and statistics communities have contributed to the rapidly growing statistical and psychometric methodologies used in test equating, scaling and linking. In addition to the literature covered in previous editions, this new edition presents coverage of significant recent research. In order to assist researchers, advanced graduate students and testing professionals, examples are used frequently and conceptual issues are stressed. New material includes model determination in log-linear smoothing, in-depth presentation of chained linear and equipercentile equating, equating criteria, test scoring and a new section on scores for mixed-format tests. In the third edition, each chapter contains a reference list, rather than having a single reference list at the end of the volume. The themes of the third edition include: \* the purposes of equating, scaling and linking and their practical context \* data collection designs \* statistical methodology \* designing reasonable and useful equating, scaling, and linking studies \* importance of test development and quality control processes to equating \* equating error, and the underlying statistical assumptions for equating

## **HANDBOOK OF RESEARCH ON SCIENCE EDUCATION**

---

*Routledge* Building on the foundation set in Volume I—a landmark synthesis of research in the field—Volume II is a comprehensive, state-of-the-art new volume highlighting new and emerging research perspectives. The

contributors, all experts in their research areas, represent the international and gender diversity in the science education research community. The volume is organized around six themes: theory and methods of science education research; science learning; culture, gender, and society and science learning; science teaching; curriculum and assessment in science; science teacher education. Each chapter presents an integrative review of the research on the topic it addresses—pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the Handbook of Research on Science Education, Volume II is an essential resource for the entire science education community.

## **MODEL SCIENCE TEACHER PREPARATION PROGRAMS**

---

### **AN INTERNATIONAL COMPARISON OF WHAT WORKS**

---

*IAP* This volume will focus on a much need comparison of science teacher preparation from around the world. In recent times (last 5 years) much has been written and communicated both in the popular press and within the annals of research oriented publications about the performance of students international in math and science. Although not a new discussion or debate, many countries are held as exemplars in how they educate their

youth and subsequently how they educate their teachers. Given this situation and given the fact that there is ample evidence to show that some countries youth perform better on tests such as the Program for International Student Assessment (PISA) and we know that teacher significantly contribute to the performance of students, it is time that we look at the specific attributes of teacher preparation worldwide. Although this volume will not look at every country that is in the comparator group for PISA and other measures, we have contacted over 18 potential authors in the same number of countries in which there is ample evidence to show successes regarding student performance and quality teacher preparation programs. The intent of the book is not just to report on the “success” of each nation. Rather the intent is to ask authors to take a critical look at the process by which science teachers are educated and share with the reader both the positive and negative aspects of such preparation programs. For all 15 contributed chapters, the editors have analyzed each and from this constructed from the “data” an analysis and report in a final chapter on the exemplary qualities from various nations and make specific recommendations regarding science teacher preparation for the global community.

## **11TH HOUR**

### **INTRODUCTION TO MOLECULAR BIOLOGY**

*John Wiley & Sons* The 11th Hour Series is designed to be used when a

textbook doesn't make sense, when the course content is tough, or when you just want a better grade in the course. The authors cut through the fluff, get to what you need to know, and then help you understand it. Clinical correlations or everyday applications include examples from the real world to help students understand key concepts more readily. Dedicated web page, there 24 hours a day, will give extra help, tips, warnings of trouble spots, extra visuals and more. A quick check on what background students will need to apply helps equip them to conquer a topic. The most important information is highlighted and explained, showing the big picture and eliminating the guesswork. After every topic and every chapter, lots of opportunity for drill is provided in every format, multiple choice, true/false, short answer, essay. An easy trouble spot identifier demonstrates which areas need to be reinforced and where to find information on them. Practice midterms and finals prep them for the real thing.
