Theoretical Nursing

Development and Progress

Lippincott Williams & Wilkins "An additional assumption was that the processes for theory development were new to nursing and hence, nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"—Provided by publisher.

Nursing Theory, Postmodernism, Post-structuralism, and Foucault

Taylor & Francis Nursing Theory, Postmodernism, Post-structuralism and Foucault critiques mainstream American nursing theory and its use of post-structural theory, comparing and contrasting how postmodern and post-structural ideas have been used fruitfully in nursing research and theorizing elsewhere. In the late 1980s, references to post-structuralism and Michel Foucault started to appear in nursing journals. Since then, hundreds of nursing publications have cited postmodernism and key post-structural ideas such as power/knowledge, discourse, and de-centering the human subject. In Nursing Theory, Postmodernism, Post-structuralism and Foucault Olga Petrovskaya argues that the application of these ideas is markedly different in American nursing theory scholarship compared to nursing theoretical scholarship generated outside the canon of "unique" nursing theory. Analyzing relevant literature from the late 1980s through 2010s, she demonstrates this difference, arguing that American nursing theory calcified into a matrix of dogmas built on logical positivism, wary of "borrowed" theory, and loyal to a "unique nursing science." Post-structural ideas that fit the matrix such as criticism of medicine are sanctioned, whereas ideas skeptical of humanistic agendas including those that challenge American nursing theory are rendered meaningless. In contrast, other nurse scholars, from Britain, Australia, Canada, and what the author calls the American enclave group, engaged with postmodern and post-structural perspectives to enrich their research and invite readers to rethink nursing practice. The book showcases examples of their intelligent, creative theorizing. Arguing that American nursing theory enervated nursing theorizing, Petrovskaya calls for opening this matrix to theoretical and methodological creativity, less rigid categories of scholarship, and healthy self-examination. Making the case that post-structural ideas are vital for nurses' ability to critically reflect on their discipline and profession, this is a necessary read for all those interested in nursing theory, philosophy and praxis.

The Future of Nursing

Leading Change, Advancing Health

National Academies Press The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
