Scientific Knowledge and Its Social Problems

Routledge Science is continually confronted by new and difficult social and ethical problems. Some of these problems have arisen from the transformation of the academic science of the prewar period into the industrialized science of the present. Traditional theories of science are now widely recognized as obsolete. In **Scientific Knowledge and Its Social Problems** (originally published in 1971), Jerome R. Ravetz analyzes the work of science as the creation and investigation of problems. He demonstrates the role of choice and value judgment, and the inevitability of error, in scientific research. Ravetz's new introductory essay is a masterful statement of how our understanding of science has evolved over the last two decades.

Vocational Education and Training in ASEAN Member States

Current Status and Future Development

Springer This book is the first monograph to systematically introduce readers to technology and vocational education and training in ASEAN countries. It details the current state of development and key development trends regarding technology and vocational education and training in the ten ASEAN countries. For each ASEAN country, the book addresses the history, status quo, characteristics, reform and development trends in technology and vocational education and training. The content mainly focuses on technology and vocational education and training systems, vocational qualification frameworks, technology and vocational education and training related personnel, etc. All the latest data presented here is drawn from the newest official website and research reports, accurately reflecting the development status of ASEAN countries and helping us make better forecasts regarding its future. This book offers a valuable reference guide for academic research in technology and vocational education and training. It can also be used as a textbook for postgraduate courses in technology and vocational education and training, as well as training material for various vocational education teachers and managers.

Sustainability in the Food Industry

[John Wiley & Sons](#) Sustainability is beginning to transform the food industry with environmental, economic and social factors being considered, evaluated and implemented throughout the supply chain like never before. Sustainability in the Food Industry defines sustainability with a comprehensive review of the industry's current approach to balancing environmental, economic and social considerations throughout the supply chain. In addition, tools and information are provided to enhance future progress. To achieve this, the book combines technical research summaries, case studies and marketing information. Coverage includes sustainability as it relates to: agricultural practices, food processing, distribution, waste management, packaging, life cycle analysis, food safety and health, environmental labeling, consumer insight and market demand, product development, practices in food manufacturing companies, food retailing and food service. An international group of authors covers the information from a global perspective. Sustainability in the Food Industry offers an overview of sustainable sources of impact and improvement, how they relate to the key sectors of the food industry and how programs may be implemented for further improvement.

A Thousand Years of Nonlinear History

More than a simple expository history, *A Thousand Years of Nonlinear History* sketches the outlines of a renewed materialist philosophy of history in the tradition of Fernand Braudel, Gilles Deleuze, and Félix Guattari, while also engaging the critical new understanding of material processes derived from the sciences of dynamics. Following in the wake of his groundbreaking *War in the Age of Intelligent Machines*, Manuel De Landa presents a radical synthesis of historical development over the last one thousand years. More than a simple expository history, *A Thousand Years of Nonlinear History* sketches the outlines of a renewed materialist philosophy of history in the tradition of Fernand Braudel, Gilles Deleuze, and Félix Guattari, while also engaging the critical new understanding of material processes derived from the sciences of dynamics. Working against prevailing attitudes that see history as an arena of texts, discourses, ideologies, and metaphors, De Landa traces the concrete movements and interplays of matter and energy through human populations in the last millennium. De Landa attacks three domains that have given shape to human societies: economics, biology, and linguistics. In every case, what one sees is the self-directed processes of matter and energy interacting with the whim and will of human history itself to form a panoramic vision of the West free of rigid teleology and naive notions of progress, and even more important, free of any deterministic source of its urban, institutional, and technological forms. Rather, the source of all concrete forms in the West's history are shown to derive from internal morphogenetic capabilities that lie within the flow of matter-energy itself.

The Regional Growth Fund

[The Stationery Office](#) This report on the government fund to support private sector jobs and growth in places that rely on the public sector, the Regional Growth Fund, finds that the initial £1.4 billion investment could result in some 41,000 more full-time-equivalent private sector jobs in the economy than without the Fund. However, there was scope to have generated more jobs relative to the amount of grant awarded. The Fund has not optimised value for money because a significant proportion of the funds were allocated to projects that offer relatively few jobs for the money invested. The report concludes that applying tighter controls over the value for money offered by individual bids and then allocating funding across more bidding rounds could have created thousands more jobs from the same resources. Rigorous evaluation will be required to quantify precisely the Fund's overall employment impact. More than two thirds (28,000) of the 41,000 additional jobs are expected to be delivered indirectly, for example through knock-on effects in companies' supply chains or the wider economy. The average project will last at least seven years. However, it is not clear how much of the Fund's boost to the private sector will be sustained in the longer term. It has also taken longer than expected to turn conditional offers of grants for projects into final offers. Therefore, despite the government's intention to get projects up and running quickly, only around a third have so far received final offers of funding

East Asian Labor and Employment Law

International and Comparative Context

[Cambridge University Press](#) This book deals with international labor and employment law in the East Asia Region (EA), particularly dealing with China, South Korea, and Japan. It explores and explains the effects of globalization and discusses the role of international lawyers, business personnel, and human resource directors who are knowledgeable, culturally sensitive, and understand the issues that can arise when dealing in EA trade and investment. The text and readings (from area experts) are organized and written to provide the reader with, first, a broad understanding and insight into the global dimensions of the fast-emerging area of labor and employment issues (e.g., global legal standards and their interplay with domestic and foreign laws); and second, to show how these laws and approaches play out in specific EA countries (comparing global approaches with the specific laws of each country on four common agenda items: regulatory administration, workers' rights, trade unions, and dispute resolution). The book should be of interest not only to lawyers, students, human resource personnel, and government officials, but also to business investors, managers, and members of the public interested in the growing phenomenon of changing labor laws and societies in China, South Korea, and Japan.

Meeting the energy challenge

a White Paper on energy

The Stationery Office There are two main energy challenges: tackling climate change by reducing carbon dioxide emissions; and ensuring clean and affordable energy as the country becomes increasingly dependent on imported fuel. These challenges have to be met against the backdrop of rising fossil fuel prices; slower than anticipated liberalisation of the EU energy markets; heightened awareness of the risk arising from remaining oil and gas reserves being concentrated in a few geographical regions; and a need for substantial new investment in power stations, the electricity grid and gas infrastructure. This White Paper sets out the Governments international and domestic strategy to address these challenges and ways to implement the Energy Review of 2006 and the 2006 Pre-Budget Report. There is a separate consultation document on nuclear power.

The New Frontiers of Fashion Law

MDPI Fashion law encompasses a wide variety of issues that concern an article of clothing or a fashion accessory, starting from the moment they are designed and following them through distribution and marketing phases, all the way until they reach the end-user. Contract law, intellectual property, company law, tax law, international trade, and customs law are of fundamental importance in defining this new field of law that is gradually taking shape. This volume focuses on the new frontiers of fashion law, taking into account the various fields that have recently emerged as being of great interest for the entire fashion world: from sustainable fashion to wearable technologies, from new remedies to cultural appropriation to the regulation of model weight, from advertising law on the digital market to the impact of new technologies on product distribution. The purpose is to stimulate discussion on contemporary problems that have the potential to define new boundaries of fashion law, such as the impact of the heightened ethical sensitivity of consumers (who increasingly require effective solutions), that a comparative law perspective renders more interesting. The volume seeks to sketch out the new legal fields in which the fashion industry is getting involved, identifying the new boundaries of fashion law that existing literature has not dealt with in a comprehensive manner.

Greenhouse Gas Control Technologies

Elsevier These proceedings contain 270 papers outlining ideas and contributions to the new scientific, technical and political discipline of Greenhouse Gas (GHG) Control. The contributions were presented at the 4th International Conference on Greenhouse Gas Control Technologies (GHGT-4). It was the largest gathering of experts active in this new and fast-developing field. GHGT-4 was different from its predecessors in that it included all greenhouse gases, not only CO₂, and all issues which could contribute to the mitigation of the greenhouse problem - technical, economic and political. The main focus was on practical solutions and real demonstrations of mitigation technology being planned and implemented today. It also addressed ways to increase the efficiency of power production and utilisation, and looked at proposals to encourage the development of renewable energy sources. During the Opening Session, 10 keynote addresses were heard from prominent personalities in government, industry and academia. To tackle this very inter-disciplinary problem and to achieve acceptable solutions, it is essential for industry and government to initiate intense dialogue and cooperation. Conferences like this can provide the opportunity for a meeting of minds between engineers and politicians in the face of global challenge. The primary attributes of this global challenge are manifold: the problem is global and international; it is inter-disciplinary, both in substance and approach; it covers technical, political and economic issues and involves government, science, industry and academia; it is complex and non-linear; and it will take the efforts of all parties involved to solve the problem. These proceedings contain ideas for starting demonstration projects and for making better use of the power and flexibility of market measures. They also show it is a problem we can influence and that there is a wealth of ideas. The challenge now is to find the right partners to put these ideas into action.

Advances in Simulation and Digital Human Modeling

Proceedings of the AHFE 2020 Virtual Conferences on Human Factors and Simulation, and Digital Human Modeling and Applied Optimization, July 16-20, 2020, USA

Springer Nature This book presents the latest advances in modeling and simulation for human factors research. It reports on cutting-edge simulators such as virtual and augmented reality, multisensory environments, and modeling and simulation methods used in various applications, including surgery, military operations, occupational safety, sports training, education, transportation and robotics. Based on two AHFE 2020 Virtual Conferences such as the AHFE 2020 Virtual Conference on Human Factors and Simulation and the AHFE 2020 Virtual Conference on Digital Human Modeling and Applied Optimization, held on July 16-20, 2020, the book serves as a timely reference guide for researchers and practitioners developing new modeling and simulation tools for analyzing or improving human performance. It also offers a unique resource for modelers seeking insights into human factors research and more feasible and reliable computational tools to foster advances in this exciting field.

Lawyers on Trial

Understanding Ethical Misconduct

Oxford University Press, USA People need lawyers for many things, including tax and immigration advice, drafting contracts, preparing wills, buying and selling houses, forming and dissolving companies, and representation and advice during divorce, probate, personal injury and criminal charges. But many people do not trust lawyers. With good reason, they fear that lawyers will neglect or overcharge them, betray them out of self-interest or on behalf of others, or obstruct the pursuit of justice out of overzealousness. Although the legal profession drafts ethical rules, law schools teach those rules, the bar exam tests lawyers' knowledge, and disciplinary bodies enforce them, we know that violations by lawyers are all too common. *Lawyers on Trial: Understanding Ethical Misconduct by California Attorneys*, by Richard L. Abel, presents six dramatic accounts of California lawyers who betrayed their clients and the legal system. Through the detailed records of the disciplinary proceedings, it examines some of the most common complaints about lawyers: chasing ambulances, charging excessive fees, violating conflict of interest rules, and displaying excessive zeal. These complex and compelling dramas serve to make the ethical rules, and the temptations they seek to curb, come vividly alive for law students, lawyers, those thinking of becoming lawyers, anyone who has been or might some day be a client, and the general public. The lessons to be drawn from these situations can help the legal profession and the public devise better strategies for ensuring that lawyers abide by the rules.

Wingless Flight

The Lifting Body Story

University Press of Kentucky Most lifting bodies, or "flying bathtubs" as they were called, were so ugly only an engineer could love them, and yet, what an elegant way to keep wings from burning off in supersonic flight between earth and orbit. Working in their spare time (because they couldn't initially get official permission), Dale Reed and his team of engineers demonstrated the potential of the design that led to the Space Shuttle. *Wingless Flight* takes us behind the scenes with just the right blend of technical information and fascinating detail (the crash of M2-F2 found new life as the opening credit for TV's "The Six Million Dollar Man"). The flying bathtub, itself, is finding new life as the proposed escape-pod for the Space Station.

Integrated Clinical Orthodontics

[John Wiley & Sons](#) **Integrated Clinical Orthodontics** provides an important new resource on the clinical interactions between the practice of orthodontics and other areas of clinical dentistry and medicine. Having at its heart the paradigm of patient-centred care, the book not only integrates the knowledge, skills, and experience of all the disciplines of dentistry and medicine, but also eases the work of orthodontists in arriving at an accurate diagnosis and a comprehensive treatment plan. Presented in a highly visual and practical format, **Integrated Clinical Orthodontics** uses clinical case presentations to illustrate the rationale and application of the integrated approach to a variety of clinical scenarios. **Integrated Clinical Orthodontics** covers areas of complexity in clinical orthodontics, specifically the role of the orthodontist as a member of a multidisciplinary team. The book outlines and details the management of congenital orofacial deformities, sleep disorders, esthetic smile creation and temporomandibular joint problems, and additionally and importantly includes specific protocols for effective communication with experts in other specialties.

Men in Transition

Theory and Therapy

[Springer Science & Business Media](#) Every year the few hundred members of the Committees, Task Forces, and Councils of the American Psychiatric Association meet in Washington, D.C. to conduct their business. They deliberate on a wide variety of issues encompassed in the activities of each group. The psychiatrists constituting this mixed and somewhat elite group include some of the better-known and promising people in the profession, which makes the plenary session and cocktail party good occasions to meet old friends and to make new ones. Several years ago one of us (N.B.L.) attended this gathering as a member of a soon-to-be defunct group, the Committee Liaison with the American College of Physicians, and met Ann Chappell, a member of the Task Force on Women. We were soon joined by Richard Grant. Ann impressed us with the work her group was doing on issues surrounding the Women's Movement as it relates to patients and the changing roles of the early 1970s. She was struck by the fact that although some women had been very active in this endeavor, nobody in American psychiatry was addressing issues which are arising in men as a result of the changing roles of women in society. Dick and Norm were moved by what she said and decided that they would make an effort to gather together people interested in the issue of the changing roles of males in society at the oncoming meeting of the American Psychiatric Association.

Victorian Britain

An Encyclopedia

[Routledge](#) First published in 1988, this encyclopedia serves as an overview and point of entry to the complex interdisciplinary field of Victorian studies. The signed articles, which cover persons, events, institutions, topics, groups and artefacts in Great Britain between 1837 and 1901, have been written by authorities in the field and contain bibliographies to provide guidelines for further research. The work is intended for undergraduates and the general reader, and also as a starting point for graduates who wish to explore new fields.

Contracts, Specifications and Engineering Relations

[Cooper Press](#) **PREFACE.** THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly as possible. The writing of this book has afforded him pleasure in his leisure moments, and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. This section is interleaved with blank sheets for the readers notes. The Author need hardly say that any suggestions addressed to the case of the publishers, will meet with consideration in a future edition. We do not pretend to write or enlarge upon a new subject. Much has been said and written-and well said and written too on the art of fishing but loch-fishing has been rather looked upon as a second-rate performance, and to dispel this idea is one of the objects for which this present treatise has been written. Far be it from us to say anything against fishing, lawfully practised in any form but many pent up in our large towns will bear us out when we say that, on the whole, a days loch-fishing is the most convenient. One great matter is, that the loch-fisher is depend- ent on nothing but enough wind to curl the water, -and on a large loch it is very seldom that a dead calm prevails all day, -and can make his arrangements for a day, weeks beforehand whereas the stream- fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead. Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, - such as many of our northern streams are, -the water is either too large or too small, unless, as previously remarked, you live near at hand, and can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and the other from the bow of the same boat. Of all the absurd beliefs as to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as much to do with catching trout in a loch as the angler. Well, we dont deny that. In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing...

Story of Chinese Zen

[Tuttle Publishing](#) The development of Zen in China is really the story of the flourishing of Chinese philosophy, arts and literature beginning as far back as the Han Dynasty and earlier. Master Nan Huai-Chin offers an engaging chronicle of both in this groundbreaking work. The Story of Chinese Zen begins with the premise that the climate during Shakyamuni's founding of Buddhism in India ultimately influence the differences behind Hinayana and Mahayana thought, practice, and methods of seeking enlightenment. From there—beginning with its transmission to China—Master Nan outlines the Zen School, exploring influences on the development of Zen before the early Tang Dynasty, different meanings of studying Zen and pursuing the heart and goal of Zen." He explores the relationship between Zen and new-Confucianism and the inseparability of religion and Zen from Chinese literature and philosophy, especially Taoism. Born in Zhejiang province, China in 1918, Nan Huai-Chin has studied under thirty-two major Taoist and Buddhist masters, including the masters of the Esoteric School of Buddhism in Tibet, from whom he received the title of Esoteric Master. He has published over thirty books and is widely recognized as one of the foremost scholars on Zen and Taoism.
