COLUMBIA CREW SURVIVAL INVESTIGATION REPORT

PDQ Press NASA commissioned the Columbia Accident Investigation Board (CAIB) to conduct a thorough review of both the technical and the organizational causes of the loss of the Space Shuttle Columbia and her crew on February 1, 2003. The accident investigation that followed determined that a large piece of insulating foam from Columbia's external tank (ET) had come off during ascent and struck the leading edge of the left wing, causing critical damage. The damage was undetected during the mission. The Columbia accident was not survivable. After the Columbia Accident Investigation Board (CAIB) investigation regarding the cause of the accident was completed, further consideration produced the question of whether there were lessons to be learned about how to improve crew survival in the future. This investigation was performed with the belief that a comprehensive, respectful investigation could provide knowledge that can protect future crews in the worldwide community of human space flight. Additionally, in the course of the investigation, several areas of research were identified that could improve our understanding of both nominal space flight and future spacecraft accidents. This report is the first comprehensive, publicly available accident investigation report addressing crew survival for a human spacecraft mishap, and it provides key information for future crew survival investigations. The results of this investigation are intended to add meaning to the sacrifice of the crew's lives by making space flight safer for all future generations.

REGRESSION MODELING STRATEGIES

WITH APPLICATIONS TO LINEAR MODELS, LOGISTIC REGRESSION, AND SURVIVAL ANALYSIS

Springer Science & Business Media Many texts are excellent sources of knowledge about individual statistical tools, but the art of data analysis is about choosing and using multiple tools. Instead of presenting isolated techniques, this text emphasizes problem solving strategies that address the many issues arising when developing multivariable models using real data and not standard textbook examples. It includes imputation methods for dealing with missing data effectively, methods for dealing with nonlinear relationships and for making the estimation of transformations a formal part of the modeling process, methods for dealing with "too many variables to analyze and not enough observations," and powerful model validation techniques based on the bootstrap. This text realistically deals with model uncertainty and its effects on inference to achieve "safe data mining".

NUCLEAR SCIENCE ABSTRACTS

THE SOCIAL SCIENCE ENCYCLOPEDIA

Routledge The Social Science Encyclopedia, first published in 1985 to acclaim from social scientists, librarians and students, was thoroughly revised in 1996, when reviewers began to describe it as a classic. This third edition has been radically recast. Over half the entries are new or have been entirely rewritten, and most of the balance have been substantially revised. Written by an international team of contributors, the Encyclopedia offers a global perspective on the key issues within the social sciences. Some 500 entries cover a variety of enduring and newly vital areas of study and research methods. Experts review theoretical debates from neo-evolutionism and rational choice theory to poststructuralism, and address the great questions that cut across the social sciences. What is the influence of genes on behaviour? What is the nature of consciousness and cognition? What are the causes of poverty and wealth? What are the roots of conflict, wars, revolutions and genocidal violence? This authoritative reference work is aimed at anyone with a serious interest in contemporary academic thinking about the individual in society.

THE SURVIVAL OF A MATHEMATICIAN

FROM TENURE-TRACK TO EMERITUS

American Mathematical Soc. "One of the themes of the book is how to have a fulfilling professional life. In order to achieve this goal, Krantz discusses keeping a vigorous scholarly program going and finding new challenges, as well as dealing with the everyday tasks of research, teaching, and administration." "In short, this is a survival manual for the professional mathematician - both in academics and in industry and government agencies. It is a sequel to the author's A Mathematician's Survival Guide."--BOOK JACKET.

ACTUARIES' SURVIVAL GUIDE

HOW TO SUCCEED IN ONE OF THE MOST DESIRABLE PROFESSIONS

Academic Press This book explains what actuaries are, what they do, and where they do it. It describes the ideas, techniques, and skills involved in the day-to-day work of actuaries. This second edition has been updated to reflect the rise of social networking and the internet, the progress toward a global knowledge-based economy, and the global expansion of the actuarial field that has occurred since the first edition. --from publisher description

SURVIVAL ANALYSIS USING S

ANALYSIS OF TIME-TO-EVENT DATA

CRC Press Survival Analysis Using S: Analysis of Time-to-Event Data is designed as a text for a one-semester or one-quarter course in survival analysis for upper-level or graduate students in statistics, biostatistics, and epidemiology. Prerequisites are a standard pre-calculus first course in probability and statistics, and a course in applied linear regression models. No prior knowledge of S or R is assumed. A wide choice of exercises is included, some intended for more advanced students with a first course in mathematical statistics. The authors emphasize parametric log-linear models, while also detailing nonparametric procedures along with model building and data diagnostics. Medical and public health researchers will find the discussion of cut point analysis with bootstrap validation, competing risks and the cumulative incidence estimator, and the analysis of left-truncated and right-censored data invaluable. The bootstrap procedure checks robustness of cut point analysis and determines cut point(s). In a chapter written by Stephen Portnoy, censored regression quantiles - a new nonparametric regression methodology (2003) - is developed to identify important forms of population heterogeneity and to detect departures from traditional Cox models. By generalizing the Kaplan-Meier estimator to regression models for conditional quantiles, this methods provides a valuable complement to traditional Cox proportional hazards approaches.

REPORT OF THE PRESIDENTIAL COMMISSION ON THE SPACE SHUTTLE CHALLENGER ACCIDENT

DIANE Publishing Reviews the circumstances surrounding the Challenger accident to establish the probable cause or causes of the accident. Develops recommendations for corrective or other action based upon the Commission's findings and determinations. Color photos, charts and tables.

SURVIVAL ANALYSIS

A SELF-LEARNING TEXT

Springer Science & Business Media A straightforward and easy-to-follow introduction to the main concepts and techniques of the subject. It is based on numerous courses given by the author to students and researchers in the health sciences and is written with such readers in mind. A "user-friendly" layout includes numerous illustrations and exercises and the book is written in such a way so as to enable readers learn directly without the assistance of a classroom instructor. Throughout, there is an emphasis on presenting each new topic backed by real examples of a survival analysis investigation, followed up with thorough analyses of real data sets. Each chapter concludes with practice exercises to help readers reinforce their understanding of the concepts covered, before going on to a more comprehensive test. Answers to both are included. Readers will enjoy David Kleinbaums style of presentation, making this an excellent introduction for all those coming to the subject for the first time.

ASSESSING GENETIC RISKS

IMPLICATIONS FOR HEALTH AND SOCIAL POLICY

National Academies Press Raising hopes for disease treatment and prevention, but also the specter of discrimination and "designer genes," genetic testing is potentially one of the most socially explosive developments of our time. This book presents a current assessment of this rapidly evolving field, offering principles for actions and research and recommendations on key issues in genetic testing and screening. Advantages of early genetic knowledge are balanced with issues associated with such knowledge: availability of treatment, privacy and discrimination, personal decisionmaking, public health objectives, cost, and more. Among the important issues covered: Quality control in genetic testing. Appropriate roles for public agencies, private health practitioners, and laboratories. Value-neutral education and counseling for persons considering testing. Use of test results in insurance, employment, and other settings.

PRACTICAL ESSENTIALS OF INTENSITY MODULATED RADIATION THERAPY

Lippincott Williams & Wilkins The third edition of Intensity Modulated Radiation Therapy was written to enhance the reader's understanding of the cutting-edge technology of Intensity Modulated Radiation Therapy. It is designed to both update old readers and inform new readers about the complexities and details of clinical management. This completely updated edition provides a step-by-step, practical approach to the use of IMRT in the evaluation and treatment of cancer patients. Because of IMRT's ability to employ individually controlled beamlets, it is an extremely promising technique, especially when paired with CT, PET, and/or MRI. With these improved procedures, doctors and clinicians will be able to take high resolution images of tumors while minimizing dosages to surrounding tissue. In order to focus on the most up to date IMRT techniques, the introductory chapters have been condensed to provide a brief overview of IMRT physics, mechanics and quality assurance, and also CT and MR imaging. To help assist in clinical decision-making it provides the reader with more than 700 full-color illustrations, IMRT tables and clear, straightforward descriptions that address a range of tumor types and sites including head and neck, urinary, and gynecologic cancers.

ANESTHETIC AND OBSTETRIC MANAGEMENT OF HIGH-RISK PREGNANCY

Springer Science & Business Media This is the 3rd edition of a classic text which still represents the only multi-disciplinary approach to the evaluation and management of a high-risk pregnancy. Since most chapters are written by a 2-author team (an anesthesiologist and an obstetrician or fetologist), information will be efficiently formatted, practical, and complete. Coverage will include causes of the health risk, pathophysiology, obstetric treatment written by an obstetrician, and anesthetic management written by an obstetric anesthesiologist. Chapters will include the latest procedures and most advanced technology. They will cover the parameters used to observe fetal well-being and deal with abnormal findings, regardless of the stage of development. Topics will extend through the

delivery and post delivery periods.

APPLIED SURVIVAL ANALYSIS

REGRESSION MODELING OF TIME-TO-EVENT DATA

John Wiley & Sons **THE MOST PRACTICAL, UP-TO-DATE GUIDE TO MODELLING AND ANALYZING TIME-TO-EVENT DATA—NOW IN A VALUABLE NEW EDITION** Since publication of the first edition nearly a decade ago, analyses using time-to-event methods have increase considerably in all areas of scientific inquiry mainly as a result of model-building methods available in modern statistical software packages. However, there has been minimal coverage in the available literature to9 guide researchers, practitioners, and students who wish to apply these methods to health-related areas of study. Applied Survival Analysis, Second Edition provides a comprehensive and up-to-date introduction to regression modeling for time-to-event data in medical, epidemiological, biostatistical, and other health-related research. This book places a unique emphasis on the practical and contemporary applications of regression modeling rather than the mathematical theory. It offers a clear and accessible presentation of modern modeling techniques supplemented with real-world examples and case studies. Key topics covered include: variable selection, identification of the scale of continuous covariates, the role of interactions in the model, assessment of fit and model assumptions, regression diagnostics, recurrent event models, frailty models, additive models, competing risk models, and missing data. Features of the Second Edition include: Expanded coverage of interactions and the covariate-adjusted survival functions The use of the Worcester Heart Attack Study as the main modeling data set for illustrating discussed concepts and techniques New discussion of variable selection with multivariable fractional polynomials Further exploration of time-varying covariates, complex with examples Additional treatment of the exponential, Weibull, and log-logistic parametric regression models Increased emphasis on interpreting and using results as well as utilizing multiple imputation methods to analyze data with missing values New examples and exercises at the end of each chapter Analyses throughout the text are performed using Stata® Version 9, and an accompanying FTP site contains the data sets used in the book. Applied Survival Analysis, Second Edition is an ideal book for graduate-level courses in biostatistics, statistics, and epidemiologic methods. It also serves as a valuable reference for practitioners and researchers in any health-related field or for professionals in insurance and government.

BASIC CONCEPTS IN BIOCHEMISTRY: A STUDENT'S SURVIVAL GUIDE

McGraw Hill Professional This second edition continues to innovatively review the toughest concepts in biochemistry for maximum comprehension in a short period of time. Unlike conventional texts or review books that stress memorizing facts, BASIC CONCEPTS stresses the mastering of fundamental concepts, so that the reader truly comprehends the material and feels comfortable applying it. Dr. Gilbert uses simple, jargon-free language and award-winning teaching techniques including algorithms, mnemonics and clinical examples.

EVENT HISTORY ANALYSIS

REGRESSION FOR LONGITUDINAL EVENT DATA

SAGE Drawing on recent "event history" analytical methods from biostatistics, engineering, and sociology, this clear and comprehensive monograph explains how longitudinal data can be used to study the causes of deaths, crimes, wars, and many other human events. Allison shows why ordinary multiple regression is not suited to analyze event history data, and demonstrates how innovative regression - like methods can overcome this problem. He then discusses the particular new methods that social scientists should find useful.

RESOURCES IN EDUCATION

REPLACEMENT OF RENAL FUNCTION BY DIALYSIS

Springer Science & Business Media Completely revised edition of a global resource first published in 1978 and previously revised in 1989. Sixty-three contributions are arranged in sections on the pathophysiology of the uremic syndrome--principles and biophysics of dialysis; technology of dialysis and associated methods; quantification and prescription; complications; pharmacological considerations; special clinical situations; organ system and metabolic complications; and organization and results of chronic dialysis. The aim is to give understanding of the complexities of modern dialysis apparatus so that practitioners can make the best use of the technology--and so that fledgling nephrologists can avoid the temptation to by-pass the theory and the nuances. PRINCIPLES AND MANAGEMENT OF UROLOGIC CANCER

BREWING JUSTICE

FAIR TRADE COFFEE, SUSTAINABILITY, AND SURVIVAL

Univ of California Press Fair trade is a fast-growing alternative market intended to bring better prices and greater social justice to small farmers around the world. But what does a fair-trade label signify? This vivid study of coffee farmers in Mexico offers the first thorough investigation of the social, economic, and environmental benefits of fair trade. Based on extensive research in Zapotec indigenous communities in Oaxaca, Brewing Justice follows the members of the cooperative Michiza, whose organic coffee is sold on the international fair-trade market, and compares them to conventional farming families in the same region. The book carries readers into the lives of coffee-producer households and communities, offering a nuanced analysis of fair trade's effects on everyday life and the limits of its impact. Brewing Justice paints a clear picture of the dynamics of the fair-trade market and its relationship to the global economy. Drawing on interviews with dozens of fair-trade leaders, the book also explores the movement's fraught politics, especially the challenges posed by rapid growth and the increased role of transnational corporations. It concludes with recommendations to strengthen and protect the integrity of fair trade. This updated edition includes a substantial new chapter that assesses recent developments in both coffee-growing communities and movement politics, offering a guide to navigating the shifting landscape of fair-trade consumption.

CLINICAL MOLECULAR DIAGNOSTICS

Springer Nature This book covers the discovery of molecular biomarkers, the development of laboratory testing techniques and their clinical applications, focusing on basic research to clinical practice. It introduces new and crucial knowledge and ethics of clinical molecular diagnosis. This book emphasizes the applications of clinical molecular diagnostic test on health management, especially from different diseased organs. It lets readers to understand and realize precision healthcare.

SURVIVAL ANALYSIS

TECHNIQUES FOR CENSORED AND TRUNCATED DATA

Springer Science & Business Media Making complex methods more accessible to applied researchers without an advanced mathematical background, the authors present the essence of new techniques available, as well as classical techniques, and apply them to data. Practical suggestions for implementing the various methods are set off in a series of practical notes at the end of each section, while technical details of the derivation of the techniques are sketched in the technical notes. This book will thus be useful for investigators who need to analyse censored or truncated life time data, and as a textbook for a graduate course in survival analysis, the only prerequisite being a standard course in statistical methodology.
