The Quest for the Original Text of the New Testament Wipf and Stock Publishers If only we could hold the actual words of Luke's descriptive narrative or Paul's outpouring of pastoral pain to the church at Corinth. Now we can. A continuing quest to recover the New Testament text allows Christians to open their Bibles with confidence that the words approximate the writers' Greek quill strokes or the English equivalents. Such thought breaths excitement into Philip Comfort's history of the New Testament text and discussion of the credibility (and limitations) of texts and translations. Comfort challenges the view that early copyists were careless and took editorial liberties. He argues that their accuracy and integrity are indisputable. While this task involves comparing manuscripts, technical facts are framed in historical and cultural color. He assures Christians that even uncovering the paper signed by Paul would not change our understanding of what he said. This introduction to the work of textual criticism challenges students to continue the quest for the original text. It is essentially a sequel to 'Early Manuscripts and Modern Translations of the New Testament.' Dimensions of Tax Design The Mirrlees Review OUP Oxford The goal of the Mirrlees Review has been to identify what makes a good tax system for an open developed economy in the 21st century and to suggest how the UK tax system could be reformed to move in that direction. As an integral part of the Review, this volume brings together thirteen studies of different dimensions of tax design, plus associated commentaries. These were commissioned from IFS researchers and other international experts, to be of interest and value in their own right, as well as to provide inspiration for the final report of the Review, which is published as a separate volume, Tax by Design. Matrix Analysis and Applied Linear Algebra SIAM Matrix Analysis and Applied Linear Algebra is an honest math text that circumvents the traditional definition-theorem-proof format that has bored students in the past. Meyer uses a fresh approach to introduce a variety of problems and examples ranging from the elementary to the challenging and from simple applications to discovery problems. The focus on applications is a big difference between this book and others. Meyer's book is more rigorous and goes into more depth than some. He includes some of the more contemporary topics of applied linear algebra which are not normally found in undergraduate textbooks. Modern concepts and notation are used to introduce the various aspects of linear equations, leading readers easily to numerical computations and applications. The theoretical developments are always accompanied with examples, which

are worked out in detail. Each section ends with a large number of carefully chosen exercises from which the students can gain further insight.

The Earliest Christian Artifacts Manuscripts and Christian Origins Wm. B. Eerdmans Publishing **Review:** "Much attention has been paid to the words of the earliest Christian canonical and extracanonical texts, yet Larry Hurtado points out that an even more telling story is being overlooked - the story of the physical texts themselves. He introduces readers to the staurogram, possibly the first representation of the cross, the nomina sacra, a textual abbreviation system, and the puzzling Christian preference for book-like texts over scrolls." "Drawing on studies by papyrologists and palaeographers as well as New Testament scholars - and including photographic plates of selected manuscripts - **The Earliest Christian Artifacts** examines the distinctive physical features of early Christian manuscripts, illustrating their relevance for wider inquiry into the complex origins of Christianity." -- book jacket.
