FORESTRY CLUBS FOR YOUNG PEOPLE

SUGGESTIONS FOR LEADERS OF FORESTRY CLUBS FORMED IN CONNECTION WITH THE WORK OF 4-H CLUBS, BOY SCOUTS, SCHOOLS AND OTHER ORGANIZATIONS

This publication has been prepared primarily for the use of leaders of young people's forestry clubs. Its purpose is to suggest forestry activities suitable for young people and ways and means of carrying on those activities. Some are suitable only for clubs formed by boys and girls, living on farms or in smaller towns; others are more suitable for young people living in the larger cities.

NORTH AMERICAN CORNUCOPIA

TOP 100 INDIGENOUS FOOD PLANTS

CRC Press Many North American plants have characteristics that are especially promising for creating varieties needed to expand food production, and there are excellent prospects of generating new economically competitive crops from these natives. The inadequacy of current crops to meet the food demands of the world's huge, growing population makes the potential of indigenous North American food plants

even more significant. These plants can also generate crops that are more compatible with the ecology of the world, and many also have inherent health benefits. Presenting detailed scholarship, a thoroughly accessible style, and numerous entertaining anecdotes, **North American Cornucopia: Top 100 Indigenous Food Plants** is a full-color book dedicated to the most important 100 native food plants of North America north of Mexico that have achieved commercial success or have substantial market potential. The introductory chapter reviews the historical development of North American indigenous crops and factors bearing on their future economic success. The rest of the book consists of 100 chapters, each dedicated to a particular crop. The book employs a user-friendly chapter format that presents the material in sections offering in-depth coverage of each plant. The first section of each chapter provides information on the scientific and English names of the plants, followed by a section on the geography and ecology of the wild forms, accompanied by a map showing the North American distribution. A section entitled "Plant Portrait" comprises a basic description of the plant, its history, and its economic and social importance. This is followed by "Culinary Portrait," concerned with food uses and culinary vocabulary. The chapters then provide an analysis of the economic future of each crop, discuss notable and interesting scientific or technological observations and accomplishments, and present extensive references.

LAST AND FIRST MEN (SCI-FI NOVEL)

e-artnow **Last and First Men** is a "future history" science fiction novel, describing the history of humanity from the present onwards across two billion years and eighteen distinct human species, of which our own is the first. Conception of history follows a repetitive cycle with many varied civilizations rising from and descending back into savagery over millions of years, as the later civilizations rise to far greater heights than the first. It is an early example of the fictional supermind; a consciousness composed of many telepathically linked individuals.

GARDENS OF BIODIVERSITY

CONSERVATION OF GENETIC RESOURCES AND THEIR USE IN TRADITIONAL FOOD PRODUCTION SYSTEMS BY SMALL FARMERS OF THE SOUTHERN CAUCASUS

Food & Agriculture Org. This book does not claim to offer a definitive prescription for sustainable agriculture and is not an exhaustive study. It puts forth a collection of concrete examples showing how genetic resources are maintained and used by small farmers for food security in the Southern Caucasus. These examples show that the livelihoods and prospects of rural people can be improved and consolidated in a sustainable manner to face important environmental, social and economic challenges without sacrificing the prosperity of future generations. The book would like to stimulate further debate, research and policies in the hope that bridges can be built between the sustainable use of biodiversity and genetic resources, traditional practices and ways of life, and the new technologies, demands and challenges of today's society.

COLOR ATLAS OF POSTHARVEST QUALITY OF FRUITS AND VEGETABLES

John Wiley & Sons The effects of time and temperature on the postharvest quality of fruits and vegetables are visually depicted in the **Color Atlas of Postharvest Quality of Fruits and Vegetables**. Through hundreds of vibrant color photographs, this unique resource illustrates how the appearance (e.g., color, shape, defects and injuries) of fruits and vegetables changes throughout their postharvest life and how storage temperature greatly contributes to critical quality changes. The book's extensive coverage describes 37 different fruits and vegetables from different groups that were stored at five specific temperatures and photographed daily after specified elapsed periods of time. Individual fruits and vegetables from the following groups are covered: subtropical and tropical fruits pome and stone fruits soft fruits and berries cucurbitaceae solanaceous and other fruit vegetables legumes and brassicas stem, leaf and other vegetable and alliums Information is provided about each individual fruit/vegetable such as characteristics, quality criteria and composition; recommendations for storage, transport and retail; and effects of temperature on the visual and compositional quality of each individual fruit or vegetable, associated with photos of the appearance at particular times and temperatures. This visual documentation shows how important it is to handle fruits and vegetables at the right temperature and what happens if these recommendations are not followed. Also shown is the importance of the initial harvest quality of the fruit/vegetable and the expected shelf life as a function of quality at harvest, storage temperature and storage time. The **Color Atlas of Postharvest Quality of Fruits and Vegetables** will appeal to a diverse group of food industry professionals in the areas of processing, distribution, retail, quality control, packaging, temperature control (refrigerated facilities or equipment) and marketing as a reference tool and to establish marketing priority criteria. Academic and scientific professionals in the area of postharvest physiology and technology, food science and nutrition can also use the book as a reference either for their study or in class to help students to visualize changes in the appearance of fruit/vegetables as a function of time/temperature.
