Wildlife Management Implications of Petroleum Exploration and Development in Wildland Environments

De potentiële effecten van milieuontwikkelingen - ten gevolge van de winning van petroleum - op het gedrag van het wild, populaties en habitus zijn geëvalueerd. De gegevens zijn gebaseerd op een literatuuroverzicht met daarnaast een selectieve bibliografie. Mogelijke benaderingen zijn gegeven tot minimalisering van de negatieve invloeden op het wildleven waartoe veranderingen in het beheer van petroleumprojecten behoren

Animal Homes

Let's Explore There's a whole world to discover in this stylish first pop-up book. Little ones will find out which animal lives where as they explore high and low, with gorgeous illustrations, playful rhyming text and simple facts on every page.

Animal Exploration Lab for Kids

52 Family-Friendly Activities for Learning about the Amazing Animal Kingdom

Quarry Books Animal Exploration Lab for Kids is your go-to introduction to the wonderful world of animals. This family-friendly animal reference guide features fun activities designed to enhance your understanding of, and love for, the animal kingdom as you: Explore the techniques that researchers use to study animals Investigate the adaptations and behaviors that make animals so unique Study how animals sense and respond to the world around them Discover new ways to support and conserve your amazing animal neighbors For example, in Unit 1 you'll use a trail camera to document animals around your home and in Unit 2, you'll examine the usefulness of blubber in keeping polar animals warm. Each lab in the book is designed to help you build new knowledge and skills around animal science and are broken into the following sections: Safety Tips & Helpful Hints provides additional guidelines and insights for successfully conducting each lab. Procedure provides details about the individual steps in each lab so you'll know just what to do. Creative Enrichment helps you think about how to take your experiment even further. The Science Behind the Fun provides a simple description of the science that supports the lab and other background information. Species Spotlight highlights a unique species from around the world. Conservation Action provides useful tips that will help you conserve wildlife. With Animal Exploration Lab for Kids, you don't have to take a trip to the zoo to start learning about the animal kingdom. The popular Lab for Kids series features a growing list of books that share hands-on activities and projects on a wide host of topics, including art, astronomy, clay, geology, math, and even how to create your own circus—all authored by established experts in their fields. Each lab contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The labs can be used as singular projects or as part of a yearlong curriculum of experiential learning. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with Lab for Kids.

Channel Islands Marine Protected Areas

First 5 Years of Monitoring, 2003-2008

Describes results from the first 5 years of monitoring the Channel Islands MPAs, discussing ecological and socioeconomic changes taking place. Also illustrates the types of information that will be used to assess the effectiveness of the MPAs in the Channel Islands. Provides details on biological and habitat monitoring, changes in commercial fishing, recreational fishing, and recreational boating, and outreach and cooperative enforcement efforts to protect the MPAs. Related materials from a special session on Channel Islands MPAs monitoring at a February 2008 California Islands Symposium are available at: http://www.dfg.ca.gov/marine/channel_islands/specialsession.asp

RHS: Explore Nature

Scholastic UK This fun-filled, full-colour RHS adventure handbook is full of ideas to help kids discover the great outdoors and get closer to nature. Created with the Royal Horticultural Society (RHS), the UK's leading gardening charity. This beautifully illustrated book is packed with fun activities, handy tips and nature facts to encourage children to explore the wonderful world around them. Grow your own strawberries and runner beans Build a hibernation home for outdoor creatures Create a nature scrapbook to treasure Discover more about plants, trees and wildlife Each page is filled with inspiring ideas for discovering and exploring plants and wildlife, with exciting activities for all seasons and weathers.

Forthcoming Books

1998 Rocket's Family Fun Activity Guide and Directory

Summer Bridge Explorations, Grades 1 - 2

Rainbow Bridge Publishing Summer Bridge Explorations prepares your first-grade graduate for second grade through progressive lessons and project-based learning. This dynamic workbook strengthens cross-curricular skills with a focus on beginning math, phonics, and comprehension. Summer Bridge Explorations makes learning last. With this dynamic series, students entering grades 1 to 4 prepare for the new year through project-based learning. Grade-level workbooks are divided into three progressive sections, one for each month of summer, and each of these sections is built around a theme-based activity that connects real-world learning with summer fun. Your child will keep learning alive by applying new skills in fun ways, all while enjoying everything summer has to offer. Lessons and activities span the curriculum, supporting growth in math, reading, writing, social studies, science, and the arts.

Kew Children's Guide

Grow, Find and Explore with Brilliant Activities, Facts, Quizzes and More

Bloomsbury Publishing Take the experience of Royal Botanic Gardens, Kew home with you with this beautifully illustrated book. It is the perfect guide to the gardens for spring, summer, autumn and winter. Learn which plants you can spot in each season and learn how to grow different plants in your own garden, including sunflowers, daffodils, peas and more. It's not just plants you can find in the garden; there are lot of different animals, insects and minibeasts hiding too! Find out why bees are little garden superheroes, how many cubs are born in a badger litter and what animals and birds do to prepare for hibernation. Around the world there are lots of different types of gardens, from woodlands and rainforests to deserts and marine gardens. Discover plants and wildlife you've never encountered before in this book!

New Hampshire Audubon

Design for Outdoor Recreation

Taylor & Francis Design for Outdoor Recreation takes a detailed look at all aspects of design of facilities needed by visitors to outdoor recreation destinations. The book is a comprehensive manual for planners, designers and managers of recreation taking them through the processes of design and enabling them to find the most appropriate balance between visitor needs and the capacity of the landscape. A range of different aspects are covered including car parking, information signing, hiking, waterside activities, wildlife watching and camping. This second edition incorporates new examples from overseas, including Australia, New Zealand, Japan and Eastern Europe as well as focusing on more current issues such as accessibility and the changing demands for recreational use.

Math and Science for Young Children

Cengage Learning MATH AND SCIENCE FOR YOUNG CHILDREN, Eighth Edition, introduces readers to engaging math and science experiences for early childhood and early elementary education programs, and provides an organized, sequential approach to creating a developmentally appropriate math and science curriculum. The content aligns with key guidelines and standards: The National Association for the Education of Young Children's (NAEYC) Professional Preparation Standards (2010); Developmentally Appropriate Practice (DAP) guidelines; Common Core Mathematics Standards; and Next Generation Science Standards (NGSS). The book also addresses STEM/STEAM and the essential domains of child growth and development during the crucial birth-through-eight age range. A valuable resource for the student/future teacher, working professional, or involved parent, MATH AND SCIENCE FOR YOUNG CHILDREN emphasizes the interrelatedness of math and science and how they can be integrated into all other curriculum areas. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Using Stress-Based Animal Models to Understand the Mechanisms Underlying

Psychiatric and Somatic Disorders

Frontiers Media SA Chronic or repeated stress, particularly psychosocial stress, is an acknowledged risk factor for numerous affective and somatic disorders in modern societies. Thus, there is substantial evidence showing that chronic stress can increase the likelihood of major depressive disorder and anxiety disorders, as well as cardiovascular diseases, irritable bowel syndrome and pain syndromes, to name but a few, in vulnerable individuals. Although a number of pharmacological agents are available to treat such stress-related disorders, many patients do not respond to them, and those who do often report a number of side effects. Therefore, a major emphasis in modern basic research is to uncover the underlying aetiology of these disorders, and to develop novel efficacious treatment strategies. This has led to a resurgence in developing, and using, appropriate animal models to study a wide variety of stress-related disorders. Thus, the aim of this research topic "Using stress-based animal models to understand the mechanisms underlying psychiatric and somatic disorders" was to bring together novel research articles and comprehensive review articles from prominent stress researchers. In addition to describing the insights such models have provided relating to the aetiology of psychiatric and somatic disorders, these articles also encompass mechanisms that are believed to underlie stress resilience and stress-protection. Finally, given the current prominence on the role of the brain-gut axis in health and disease, the research topic covers the emerging evidence showing how the gut, particularly the microbiota, influences affective behaviour and physiology.

Explore Spring!

25 Great Ways to Learn About Spring

Nomad Press From tracking spring peepers and raising tadpoles to learning about seeds and recording plant growth, Explore Spring! 25 Great Ways to Learn About Spring invites young readers to explore the wonders of spring by becoming scientists in the field. Combining hands-on learning with solid science, trivia, riddles, and terrific illustrations, projects investigate "the reason for the season" and include identifying trees and measuring their growth, recording soil temperature, and observing the forest floor. Bird migration and nest building are covered, and the movement of air and water is studied with experiments in capillary action and in such activities as "Making Parachutes," Making Kites," and "Mapping Air Currents with Bubbles."

Cottage Country Ontario Backroad Mapbook

Mussio Ventures Ltd. Covering the idyllic cottage destinations of the Muskoka and Kawartha areas, the natural splendor of Algonquin Provincial Park, the bustling National Capital Area and all the way up to North Bay on Lake Nipissing in the north, this Mapbook is your ultimate guide to one of the country's most popular outdoor recreation destinations. Known as the heart of Ontario's outdoors, Cottage Country is home to thousands of scenic lakes and rivers, vibrant forests and rugged and rocky Canadian Shield. Algonquin Park, in particular, is one of the world's most popular canoeing destinations, attracting people from far and wide to paddle, camp and fish among its iconic natural beauty. Features - Map Key & Legend - Topographic Maps - Detailed Adventure Section >> Backroad Attractions, Fishing Locations, Hunting Areas, Paddling Routes, Parks & Campsites, Trail Systems, ATV Routes, Snowmobile Areas, Wildlife Viewing, Winter Recreation, Service Directory, Accommodations, Sales & Services, Tours & Guides, Index, Adventure Index, Map Index, Trip Planning Tools,

People and Wildlife

Frontiers Media SA We live in a world filled with fascinating plants and animals, each adapted to environments that range from freezing arctic tundras to humid tropical forests. Our world is also home to more than seven billion people, a number added to every day. Each of us puts pressure on the environment and the space left for wildlife. At its most extreme, every aspect of the environment has been influenced by people's choices, and nowhere more so than the urban areas where most people live. Urban areas are full of people playing and working. They are also full of animals and plants, often living secret lives that go unnoticed. Our interactions with wildlife are often determined by our desire to get close to nature, or sometimes our fear of it. When people think of urban areas they mostly imagine big cities, but these areas extend into more 'suburban' environments made up of houses, gardens, roads and parks. These landscapes are often filled with wildlife that represent a combination of local plants and animals with species from other places that are planted or escaped, creating a unique habitat linked directly with the people who live there. There are many challenges for the species found here, but many opportunities too. People can individually affect the environment, for example, by owning pet cats who are like mini tigers preying on the local birds; or by leaving out trash and drawing in herds of peccaries or families of raccoons. But it is in combination that we have the greatest impact. For example, houses and street lamps generate lots of light noise which can distract moths from their usual habits, and the roads and streets we build divide up the habitat making it harder for wildlife to move around and find resources. We in turn are also affected by the environment; living in nature-filled areas can positively affect our health and our well-being, yet interactions with certain species (like ticks or mosquitoes) can bring disease or discomfort. Scientists and 'citizen scientists' (expert members of the public) around the world are exploring our interactions with wildlife and nature in urban areas, and here we explore some of this research. This collection of articles aims to highlight some of the amazing wildlife that live alongside us and we explore how we can positively and negatively affect these species.

Wildlife Review

Developing Vocabulary and Oral Language in Young Children

Guilford Publications This book presents the most effective instructional strategies for promoting vocabulary growth in the early grades, when the interdependence of word learning and oral language development is especially strong. The authors guide teachers in choosing the best materials and in fostering home-school connections, and share six key principles for building vocabulary. Included are guiding questions; text boxes connecting vocabulary to the Common Core State Standards; examples from real teachers; reproducible checklists, rubrics, and other tools; and an appendix of additional vocabulary resources. Purchasers get access to a Web page where they can download and print the reproducible materials in a convenient 8 1/2" x 11" size.

Big Ideas in Primary Science: Understanding the Climate Crisis

Taylor & Francis **Big Ideas in Primary Science: Understanding the Climate Crisis** takes a fresh approach to learning the science of climate change. It combines new thinking in science teaching using big ideas, with our growing need to look after our planet, and encourages children to learn from what scientists have to say about issues that will impact their lives today and in the future. The book offers primary teachers the subject and pedagogical knowledge, as well as the confidence they need, to integrate the seeds of big ideas into their curriculum. It provides models of good practice which exemplify how primary-aged children can work towards understanding some of science's big ideas and engage with important issues related to climate change. There are also opportunities for children to develop skills and understanding from other curriculum areas, such as geography, design technology, and art. The easy-to-use book covers topics such as: Weather Climate Climate change Impact of the climate crisis on our lives Impact of the climate crisis on wildlife The world we must create Taking climate action By making the ideas their own, children can develop informed ways of thinking about issues related to climate change and feel empowered to act in ways which can make a difference. Full of ideas about the climate crisis, **Big Ideas in Primary Science** is a comprehensive, valuable, and essential resource for all teachers of primary science.
