Tubes

A Journey to the Center of the Internet with a new introduction by the Author

Ecco *An engaging, narrative tour behind the scenes of our everyday lives to see the dark beating heart of the Internet itself. We are all connected now. But connected to what, exactly? In Tubes, journalist Andrew Blum takes readers on a fascinating journey to find out. When former Senator Ted Stevens of Alaska famously described the Internet as "a series of tubes," he seemed hopelessly, foolishly trapped in an old way of knowing the world. But he wasn't wrong. After all, as Blum writes, the Internet exists: for all the talk of the "placelessness" of our digital age, the Internet is as fixed in real, physical places as any railroad or telephone ever was. It fills enormous buildings, converges in some places and avoids others, and it flows through tubes under ground, up in the air, and under the oceans all over the world. You can map it, you can smell it, and you can even visit it—and that's just what Blum does in Tubes. From the room in Berkeley where the Internet flickered to life to the busiest streets in Manhattan as new fiber optic cable is laid down; from the coast of Portugal as a 10,000-mile undersea cable just two thumbs' wide is laid down to connect Europe and West Africa to the wilds of the Pacific Northwest, where Google, Microsoft and Facebook have built monumental data centers—Blum visits them all to chronicle the dramatic story of the Internet's development, explain how it all works, and capture the spirit of the place/ Like Tracy Kidder's classic The Soul of a New Machine or Tom Vanderbilt's recent bestseller Traffic, Tubes combines deep reporting and lucid explanation into an engaging quest to understand the everyday world we live in.*

The Internet in Everything

Freedom and Security in a World with No Off Switch

Yale University Press *A compelling argument that the Internet of things threatens human rights and security and that suggests policy prescriptions to protect our future The Internet has leapt from human-facing display screens into the material objects all around us. In this so-called Internet of Things—connecting everything from cars to cardiac monitors to home appliances—there is no longer a meaningful distinction between physical and virtual worlds. Everything is connected. The social and economic benefits are tremendous, but there is a downside: an outage in cyberspace can result not only in a loss of communication but also potentially a loss of life. Control of this infrastructure has become a proxy for political power, since countries can easily reach across borders to disrupt real-world systems. Laura DeNardis argues that this diffusion of the Internet into the physical world radically escalates governance concerns around privacy, discrimination, human safety, democracy, and national security, and she offers new cyber-policy solutions. In her discussion, she makes visible the sinews of power already embedded in our technology and explores how hidden technical governance arrangements will become the constitution of our future.*

Journey from the Center of the Sun

Jack Zirker takes us on an imaginary voyage from the center of the sun to its surface, showing us how sunlight is made and finally following the sun's energy to the far reaches of the solar system. Along the way, he introduces the basic processes at work in our nearest star and the exciting answers solar scientists are finding to problems that have long perplexed astronomers. Journey from the Center of the Sun describes how theory and practice are coming together to provide a new understanding of this old star. At this moment, solar physicists are collecting the best observations ever obtained about the sun's interior and dynamic atmosphere, while a new breed of theorists is interpreting these data using computer simulations. Zirker reports on cutting-edge advances and looks at the tough questions solar physicists are beginning to crack. How can we account for the solar wind that causes the sun to lose mass at an astonishing rate? Where have all the neutrinos gone? How does the sun generate magnetic sunspots, and why does it have a sunspot cycle? What causes a solar flare to explode? How does the sun affect the earth's climate? What is a sunquake? For the armchair astronomer or the

student of astrophysics, this book provides an unusually complete picture of solar physics today.

Platforms and Artificial Intelligence

The Next Generation of Competences

Springer Nature *Artificial intelligence (AI) and platforms are closely related. Most investments in AI, especially in critical technologies, are provided by large platforms. This book describes how platforms invest in AI and how AI will impact the next generation of competences, following a twofold approach to do so: on the one hand, the book seeks to understand how platforms for investment in intangibles and AI are organized, but on the other hand, it provides a framework to describe how AI will change jobs and competences in the future. Moreover, the book addresses five main themes: 1. platforms, platformization, and the foundations of their business models; 2. artificial intelligence, technological tendencies, and the policy agenda; 3. artificial intelligence, productivity, and the next generation of competences; 4. artificial intelligence, productivity, and the digital divide; 5. artificial intelligence, ethics, and the post-truth society. The book's content is mostly based on papers presented at the last two installments of the World Conference on Intellectual Capital for Communities. It brings together the views of leading scholars and experts on how artificial intelligence and platformization will impact competences in the near future.*
