### THE SECRETS OF HAPPY FAMILIES

### IMPROVE YOUR MORNINGS, RETHINK FAMILY DINNER, FIGHT SMARTER, GO OUT AND PLAY AND MUCH MORE

Hachette UK Bestselling author and New York Times family columnist Bruce Feiler found himself squeezed between caring for ageing parents and raising his children. So he set out on a three-year journey to find the smartest ideas and the most cutting-edge research about families of all varieties, novel solutions to make his own family happier. Instead of the usual psychologists and family 'experts', he sought out the most creative minds - from Silicon Valley to the set of Modern Family, from top negotiators to the army - and asked them what team-building exercises and problem-solving techniques they use. Feiler then tested these ideas with his wife and kids. The result is a fun, completely original look at how families can draw closer together. Felier's life-changing discoveries include a radical plan to reshape your family in twenty minutes a week, Warren Buffett's guide for setting an allowance, and the Harvard handbook for resolving conflict. The Secrets of Happy Families is a timely, counterintuitive book that answers the questions countless parents are asking: how do we manage the chaos of our lives? How do we teach our kids values? How do we make our family happier? Written in a charming, accessible style, The Secrets of Happy Families is smart, funny and fresh, and will forever change how your family lives every day.

#### **THE SUN: A LABORATORY FOR ASTROPHYSICS**

---

Springer Science & Business Media As in the days following Skylab, solar physics came to the end of an era when the Solar Maximum Mission re-entered the earth's atmosphere in December 1989. The 1980s had been a pioneering decade not only in space- and ground-based studies of the solar atmosphere (Solar Maximum Mission, Hinotori, VLA, Big Bear, Nancay, etc.) but also in solar-terrestrial relations (ISEE, AMPTE), and solar interior neutrino and helioseismology studies. The pace of development in related areas of theory (nuclear, atomic, MHD, beam-plasma) has been equally impressive. All of these raised tantalizing further questions about the structure and dynamics of the Sun as the prototypical and best observed star. This Advanced Study Institute was timed at a pivotal point between that decade and the realization of Yohkoh, Ulysses, SOHO, GRANAT, Coronas, and new ground-based optical facilities such as LEST and GONG, so as to teach and inspire the up and coming young solar researchers of the 1990s. The topics, lecturers, and students were all chosen with this goal in mind, and the result seems to have been highly successful by all reports.
