Economic Analysis of High Speed Rail in Europe

Fundacion BBVA **Este informe pretende contribuir al análisis económico de los proyectos de inversión en alta velocidad ferroviaria.** La evaluación económica de proyectos puede ayudar a los gobiernos a formarse una idea más precisa sobre los beneficios esperados de distintas líneas de actuación que absorben dinero público para resolver un mismo problema de transporte. En este informe se trata de determinar las circunstancias en las que la inversión en alta velocidad es socialmente deseable y en que otras la sociedad gana posponiendo la inversión. La red de alta velocidad puede construirse gradualmente, añadiendo nuevas líneas una vez que la evaluación económica muestra una rentabilidad social positiva.

Ecotoxicology of Antifouling Biocides

Springer Science & Business Media **Organotin compounds, used as antifouling biocides since 1960, are chemical compounds that act as endocrine disrupters.** It is not known how organotin compounds cause hormone disturbance, however, and many questions remain about their effect on aquatic organisms. Studies on organotin compounds have recently evolved, with many new findings reported. Following a worldwide ban on organotin compounds in 2008, alternative compounds will mainly be used, with the potential for coastal areas to become contaminated, causing, among other effects, cholinesterase inhibition in aquatic organisms. Use of alternative compounds must be controlled to avoid such errors. These and other findings are described and concisely summarized in this book, providing a useful reference in countries where alternative biocides are being considered. Included are studies on the effects on marine organisms, making this book an excellent aid to experts in environmental chemistry, to government organizations, and to students.

Crap CVs

Penguin UK Application for Employment I refer to the recent death of the Technical Manager at your company and hereby apply for the replacement of the deceased manager. Each time I apply for a job, I get a reply that there is no vacancy but in this case I have caught you red-handed and you have no excuse because I even attended the funeral to be sure that he was truly dead and buried before applying. Attached to my letter is a copy of my CV and his death certificate. *Crap CVs* is a hilarious compilation of the worst job applications imaginable, including overly-honest cover letters, embarrassing typos, mortifying personal revelations, awkward interview questions, misplaced self-confidence, self-aggrandizing gibberish, blatant truth-twisting and, of course, outright lies.

High Energy Spin Physics

Volume 2: Workshops Proceedings of the 9th International Symposium Held at Bonn, FRG, 6-15 September 1990

Springer Science & Business Media The 9th International Symposium on High Energy Spin Physics was held in Bonn, 6-15 September 1990, with the Physikalisches Institut der Universität Bonn as the host. The symposium was preceded by a series of four workshops on • polarized electron sources and electron spin polarimeters • Siberian snakes and polarization in circular machines • polarized gas targets • polarized solid targets. 160 participants from 11 countries, among them many young physicists, came together and discussed mainly technological spin problems. The high level of participation indicates that workshops combined with the symposium are attractive not only for people who plan and prepare polarized beams and targets but also for experimentalists and theorists dealing with high energy spin physics. At these workshops many very interesting and important recent results were presented and reviewed. Thus we hope these proceedings will be valuable to many researchers in these fields. The Organizing Committee would like to thank all participants, in particular the speakers and the session chairmen, for their contributions to the workshops and for helping to create a lively and stimulating atmosphere. Special thanks go to the organizers - W. Haeblerli, S. Mango, E. Reichert, E. Steffens, W. Thiel, U. Wienands - for their cooperation in preparing and running these workshops. We gratefully acknowledge the enthusiastic help of the members of our institute in preparing and running the conference and the workshops, especially Mrs. D. FaSbender, Mrs. E. Wendorf, Mrs. J. Wetzel, and Dr. U. Idschok.

Valuing Ecosystem Services

Toward Better Environmental Decision-Making

National Academies Press Nutrient recycling, habitat for plants and animals, flood control, and water supply are among the many beneficial services provided by aquatic ecosystems. In making decisions about human activities, such as draining a wetland for a housing development, it is essential to consider both the value of the development and the value of the ecosystem services that could be lost. Despite a growing recognition of the importance of ecosystem services, their value is often overlooked in environmental decision-making. This report identifies methods for assigning economic value to ecosystem services—“even intangible ones”—and calls for greater collaboration between ecologists and economists in such efforts.

The Art of Hellenistic Palestine

British Archaeological Reports Limited The art of the Hellenistic age (here taken as 332 BC to 37 BCE) in Palestine demonstrates the extent to which a province could be integrated into the rich, established culture of the Hellenistic world. Its study here examines the art itself, and specifically the themes, types, iconography, and style of local productions. The study can be instructive on the ethnic texture of Palestine, its regional differences, its widely practiced religion and cults, and its culture in general. Likewise, it may supplement both historical research on the period, which appears to have reached a dead end of sorts, and archaeological inquiry, the results of which have been partial or insufficient. It can help address whether the art was incorporated into the Hellenistic koine, the manner in which it utilized local and foreign elements, and the question of how the culture of the period left a mark so profound that it can be traced until the end of the Byzantine period.
