AUTOMOTIVE DEVELOPMENT PROCESSES

PROCESSES FOR SUCCESSFUL CUSTOMER ORIENTED VEHICLE DEVELOPMENT

Springer Science & Business Media The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integrating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of auto- tive development - the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road s- face via gearboxes, transmission shafts and wheels, which together with spr- damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

LAW'S TRIALS

THE PERFORMANCE OF LEGAL INSTITUTIONS IN THE US 'WAR ON TERROR'

Cambridge University Press The US 'war on terror' has repeatedly violated fundamental rule of law values. When executive and legislature commit such egregious wrongs, courts represent the ultimate

defense. *Law's Trials: The Performance of Legal Institutions in the US 'War on Terror'* offers the first comprehensive account of judicial performance during the 16 years of the Bush and Obama administrations. Abel examines criminal prosecutions of alleged terrorists, courts martial of military personnel accused of law of war violations, military commission trials of 'high value detainees', habeas corpus petitions by Guantanamo detainees, civil damage actions by victims of both the 'war on terror' and terrorism, and civil liberties violations by government officials and Islamophobic campaigners. *Law's Trials* identifies successful defenses of the rule of law through qualitative and quantitative analyses, comparing the behavior of judges within and between each category of cases and locating those actions in a comparative history of efforts to redress fundamental injustices.

Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

AMERICAN MULTINATIONALS AND JAPAN

THE POLITICAL ECONOMY OF JAPANESE CAPITAL CONTROLS, 1899-1980

BRILL "This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why a little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

ARTEFACT KINDS

ONTOLOGY AND THE HUMAN-MADE WORLD

Springer Science & Business Media This book is concerned with two intimately related topics of metaphysics: the identity of entities and the foundations of classification. What it adds to previous discussions of these topics is that it addresses them with respect to human-made entities, that is, artefacts. As the chapters in the book show, questions of identity and classification require other treatments and lead to other answers for artefacts than for natural entities. These answers are of interest to philosophers not only for their clarification of artefacts as a category of things but also for the new light they may shed on these issue with respect to to natural entities. This volume is structured in three parts. The contributions in Part I address basic ontological and metaphysical questions in relation to artefact kinds: How should we conceive of artefact kinds? Are they real kinds? How are identity conditions for artefacts and artefact kinds related? The contributions in Part II address meta-ontological questions: What, exactly, should an ontological account of artefact kinds provide us with? What scope can it aim for? Which ways of approaching the ontology of artefact kinds are there, how promising are they, and how should we assess this? In Part III, the essays offer engineering practice rather than theoretical philosophy as a point of reference. The issues addressed here include: How do engineers classify technical artefacts and on what grounds? What makes specific classes of technical artefacts candidates for ontologically real kinds, and by which criteria?

AMPHIBIAN CONSERVATION

GLOBAL EVIDENCE FOR THE EFFECTS OF INTERVENTIONS

Pelagic Publishing Ltd Amphibian Conservation is the fourth in the series of Synopses of Conservation Evidence, linked to the online resource www.ConservationEvidence.com. This synopsis is part of the Conservation Evidence project and provides a useful resource for conservationists. It forms part of a series designed to promote a more evidence-based approach to biodiversity conservation. Others in the series include bee, bird, farmland and bat conservation and many others are in preparation. Approximately 32% of the 7,164+ amphibian species are currently threatened with extinction and at least 43% of species are declining. Despite this, until recently amphibians and their conservation had received little attention. Although work is now being carried out to conserve many species, often it is not adequately documented. This book brings together and summarises the available scientific evidence and experience relevant to the practical conservation of amphibians. The authors consulted an international group of amphibian experts and conservationists to produce a thorough summary of what is known, or not known, about the effectiveness of amphibian conservation actions across the world. "The book is packed with literature summaries and citations; a veritable information goldmine for graduate students and researchers. It also admirably provides decision makers with a well-researched resource of proven interventions that can be employed to stem/reverse the decline of amphibian populations." -John G Palis, Bulletin of the Chicago Herpetological Society
