The Sound of Innovation

Stanford and the Computer Music Revolution

MIT Press **How a team of musicians, engineers, computer scientists, and psychologists developed computer music as an academic field and ushered in the era of digital music. In the 1960s, a team of Stanford musicians, engineers, computer scientists, and psychologists used computing in an entirely novel way: to produce and manipulate sound and create the sonic basis of new musical compositions. This group of interdisciplinary researchers at the nascent Center for Computer Research in Music and Acoustics (CCRMA, pronounced "karma") helped to develop computer music as an academic field, invent the technologies that underlie it, and usher in the age of digital music. In The Sound of Innovation, Andrew Nelson chronicles the history of CCRMA, tracing its origins in Stanford's Artificial Intelligence Laboratory through its present-day influence on Silicon Valley and digital music groups worldwide. Nelson emphasizes CCRMA's interdisciplinarity, which stimulates creativity at the intersections of fields; its commitment to open sharing and users; and its pioneering commercial engagement. He shows that Stanford's outsized influence on the emergence of digital music came from the intertwining of these three modes, which brought together diverse supporters with**

different aims around a field of shared interest. Nelson thus challenges long-standing assumptions about the divisions between art and science, between the humanities and technology, and between academic research and commercial applications, showing how the story of a small group of musicians reveals substantial insights about innovation. Nelson draws on extensive archival research and dozens of interviews with digital music pioneers; the book's website provides access to original historic documents and other material.

The Oxford Handbook of Time in Music

Oxford University Press **"The work of this introductory chapter is twofold; first, to provide a brief historical overview of the changing nature and conception of musical time over the last two thousand years, and second, to set out the arc of the work through detailing the central points of each chapter. While the individual pieces of writing bring vital and varied perspectives from musicology, ethnomusicology, philosophy, psychology, and socio-cultural work, what unites them is their attention to music of the modern period, with a strong focus on the multiplicities of contemporary practice, while also pointing to their nineteenth-century antecedents. In introducing the main themes of the book, the introduction calls attention to the burgeoning scholarship on time in music ranging between the immediate feelings and socialities of being in time with others and the broader imaginings of the cultural politics of time in music"--**
