**INFORMATION VISUALIZATION****AN INTRODUCTION**

**Springer** Information visualization is the act of gaining insight into data, and is carried out by virtually everyone. It is usually facilitated by turning data – often a collection of numbers – into images that allow much easier comprehension. Everyone benefits from information visualization, whether internet shopping, investigating fraud or indulging an interest in art. So no assumptions are made about specialist background knowledge in, for example, computer science, mathematics, programming or human cognition. Indeed, the book is directed at two main audiences. One comprises first year students of any discipline. The other comprises graduates – again of any discipline – who are taking a one- or two-year course of training to be visual and interaction designers. By focusing on the activity of design the pedagogical approach adopted by the book is based on the view that the best way to learn about the subject is to do it, to be creative: not to prepare for the ubiquitous examination paper. The content of the book, and the associated exercises, are typically used to support five creative design exercises, the final one being a group project mirroring the activity of a consultancy undertaking a design (not an implementation) for a client. Engagement with the material of this book can have a variety of outcomes. The composer of a school newsletter and the applicant for a multi-million investment should both be able to convey their message more effectively, and the curator of an exhibition will have new presentational techniques on their palette. For those students training to be visual/interaction designers the exercises have led to original and stimulating outcomes.

**ALGEBRA: FORM AND FUNCTION**

---

**Wiley Global Education** Algebra is fundamental to the working of modern society, yet its origins are as old as the beginnings of civilization. Algebraic equations describe the laws of science, the principles of engineering, and the rules of business. The power of algebra lies in its efficient symbolic representation of complex ideas, and this also presents the main difficulty in learning it. It is easy to forget the underlying structure of algebra and rely instead on a surface knowledge of algebraic manipulations.

**CONSUMER BEHAVIOR AND MARKETING STRATEGY**

---

**Irwin Professional Publishing** This work shows how the various elements of consumer analysis fit together in an integrated framework, called the Wheel of Consumer Analysis. Psychological, social and behavioural theories are shown as useful for understanding consumers and developing more effective marketing strategies. The aim is to enable students to develop skills in analyzing consumers from a marketing management perspective and in using this knowledge to develop and evaluate marketing strategies. The text identifies three groups of concepts - affect and cognition, behaviour and the environment - and shows how these they influence each other as well as marketing strategy. The focus of the text is managerial, with a distinctive emphasis on strategic issues and problems. Cases and questions are included in each chapter.
