Dr. Ottolini has organized her section to focus on a variety of issues of relevant to all pediatricians, but which pose special challenge to the Pediatric Hospitalists. As pediatric care has advanced, children who would not have survived infancy are growing into young adults with complex chronic diseases and dependence upon technology. They frequently require hospitalization to address exacerbation of underlying disease processes and procedures to improve their quality of life. The articles are devoted to patient care challenges of troubleshooting malfunctioning technology, co-managing medically complex patients pre and post-op with surgical colleagues, and the Hospitalist's evolving role in performing procedures and sedation in this population of vulnerable patients. Also discussed rare strategies to maximize communication with parents, patients and primary care providers during hospitalization, especially for medically complex patients. Dr. Ullrich and Dr. Wolfe Pediatric have worked to bring relevant articles on palliative care to the pediatrician. While life-threatening conditions in childhood are rare, children with LTC account for a high proportion of pediatric hospital care, and about one half of such children die in the inpatient setting. The number of hospital-based pediatric palliative care programs has increased dramatically over the past decade to meet the palliative care needs of hospitalized children including symptom management, facilitation of communication, decision-making and advance care planning support, and coordination of care. Given these considerations, it is evident that the topics of pediatric palliative care and hospital medicine are fitting counterparts for this comprehensive issue. **Grassroots Medicine The Story of America's Free Health Clinics** Rowman & Littlefield This book describes the emergence of the free health clinic from its roots in the late 1960s and early 1970s, created by medical and lay social activists for young, alienated persons with substance abuse problems and by African American social activists for racial and ethnic minority groups. However, in the mid to late 1980s and 1990s, a second generation of free clinics began to develop rapidly in many different communities throughout the country, shifting their focus to the working poor and the uninsured. This growth has occurred with relatively little public attention and almost no scholarly investigation. This book fills this gap in academia by delving into both the history of the free health clinic and the stories of the volunteers, staff members, and patients of the modern free health care clinic. Through countless research and hundreds of hours of recorded interviews, this book gives the reader a view into the free health care community, represented by 45 clinics--old, new, big and small--spread throughout 10 states and the District of Columbia. The book includes many quotations from the many interviews conducted by the author to provide an honest, passionate view of the free health care clinic from the frontlines.
