SHOOTING IN SH*TTY LIGHT

THE TOP TEN WORST PHOTOGRAPHY LIGHTING SITUATIONS AND HOW TO CONQUER THEM

Peachpit Press Sometimes photographers have to shoot in less than ideal lighting situations. Maybe the wedding is mid-day in the middle of a field, or perhaps the event is in a florescent-lit room. These scenarios can be particularly intimidating for beginning photographers who don't know how to handle the many undesirable lighting situations they may encounter. In *Shooting in Sh*tty Light*, professional photographers Lindsay Adler and Erik Valind cover the top ten worst lighting situations and provide a variety of solutions for each. They explain which solutions are most practical and why one option might be preferable over another, examining such problems as extremely low lighting when no flash is allowed, strong backlight, and the light on an overcast day. Unlike other books that focus on natural light or lighting in general, this book addresses a very real need of beginning photographers, answering the question, "What do I do when the lighting is terrible?" Lindsay and Erik candidly show you the tools at your disposal, demonstrating the techniques essential to getting the job done with minimal fuss. Shows how to deal with ten of the worst lighting situations, such as harsh midday light, extremely low light, and mixed light. Offers real-life examples and practical solutions for handling poor light, such as identifying natural reflectors, bouncing light off a wall, or utilizing flash gels. Features a fun, conversational style to help you conquer the fear of poor lighting and approach any lighting situation with confidence!

FANTASY NUDE PHOTOGRAPHY

USE LIGHTING, POSING, AND DIGITAL COMPOSITING TECHNIQUES TO CREATE AMAZING IMAGES

Amherst Media Of the many different types of fine art photography, fantasy nudes are among the more creative and daring. Since we're dealing in fantasy, anything is possible. It's not necessary to travel to exotic locales for a shoot or for that matter, limit yourself to locales that exist at all! With a little imagination, simple lighting arrangements and some computer postproduction, it's possible to simulate location shoots, create imagined locations or take a standard nude shot and make it into an exotic portrait. One of the benefits of creating images in this manner is that it frees the photographer up from needing a model to be in the right place at the right time. Working with preexisting nature or location shots, it's possible to photograph a model in the comfort of a studio and then combine the images by compositing. Kirby presents dozens of examples where he employed this method to great success. While creating fantastical and striking backgrounds are a big part of Kirby's work, thoughtful lighting plans when shooting the models is what makes the images really stand out. He experiments with different ways of using his lights, sometimes creating his own DIY lighting units, and shares the details throughout the book. Matching the light in the studio to the light of the imagined location is imperative. Each photo in the book has an explanation of the concept for the image, details on the execution of the shoot, and a

lighting diagram. In addition, the images are also accompanied by alternate photos or before-and-after shots. Not every image in the book is rooted in fantasy. There are dramatic studio portraits and unique nature shots all created in the same manner that Kirby employs for his fantasy shots. Working in this manner allows for more trouble-shooting options. Sometimes it is necessary to create an image under less than suitable conditions. For instance, say your shoot requires a summery scene in mid-winter. In one of the lessons, Kirby used a previously taken picture of a bright cloudy sky, added lighting to the model as if the shoot were being done outdoors and photographed the model in front of blue screen allowing him the option to drop her into the landscape photo afterwards.

ENSINO DE GEOGRAFIA E REPRESENTAÇÃO DO ESPAÇO GEOGRÁFICO

Clube de Autores (managed) Este livro surgiu a partir das discussões realizadas na disciplina “Cartografia no Ensino de Geografia”, com alunos de graduação em Geografia da UFPA, no ano de 2013, e também de resultados obtidos com a execução do projeto “A cartografia em sala de aula: capacitação de professores da rede pública de ensino no uso da cartografia e de geotecnologias”, financiado pela Pró-Reitoria de Extensão da UFPA. Notamos durante a realização das atividades da disciplina e do projeto que há uma necessidade significativa de referências bibliográficas sobre o uso da cartografia na prática de ensino-aprendizagem, que aborde as novas tecnologias da cartografia que podem ser aplicadas em sala de aula, como forma de subsidiar o trabalho docente e tornar as aulas mais atrativas. Assim, reunimos uma série de artigos que, além do mapa, apresentam novas formas de ensino, que complementem a aula expositiva de geografia.

THE ROMAN BANQUET

IMAGES OF CONVIVIALITY

Cambridge University Press Dining was an important social occasion in the classical world. Scenes of drinking and dining decorate the wall paintings and mosaic pavements of many Roman houses. They are also painted in tombs and carved in relief on sarcophagi and on innumerable smaller grave monuments. Drawing frequently upon ancient literature inscriptions as well as archaeological evidence, this book examines the visual and material evidence for dining through Roman antiquity. Richly illustrated, Roman Banqueting offers the fullest and varied picture of the role of the banquet in Roman life.

THE BOOK OF L

Springer Science & Business Media This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

RECEPTIONS OF ANTIQUITY

Academia Press This volume presents a series of papers which cover the general theme of the reception of antiquity, a topic which has in recent years become a discipline in itself, or what some might call a 'cross-discipline'. Indeed the Nachleben of the (culture of) classical antiquity, and of antiquity as a whole, manifests in a number of diverse domains, opening up the field of reception studies to scholars from disciplines other than Classics. This collection of papers illustrates this diversity, uniting as it does original research by scholars from a variety of disciplines: classicists, historians, theatre historians, architectural historians, psychologists, archaeologists, artists, and more, all of whom have treated some aspect of the so-called 'classical tradition' by means of their own individual approaches, leading to a volume rich and dense in themes and methodologies. 'Receptions of antiquity' has been written by friends of Freddy Decreus, in honour of his career, and in celebration of his thought.

THE ARCHAEOLOGY OF ANIMALS

Routledge Ever since the discovery of fossil remains of extinct animals associated with flint implements, bones and other animal remains have been providing invaluable information to the archaeologist. In the last 20 years many archaeologists and zoologists have taken to studying such "archaeofaunal" remains, and the science of "zoo-archaeology" has come into being. What was the nature of the environment in which our ancestors lived? In which season were sites occupied? When did our earliest ancestors start to hunt big game, and how efficient were they as hunters? Were early humans responsible for the extinction of so many species of large mammals 10-20,000 years ago? When, where and why were certain animals first domesticated? When did milking and horse-riding begin? Did the Romans influence our eating habits? What were sanitary conditions like in medieval England? And could the terrible pestilence which afflicted the English in the seventh century AD have been plague? These are some of the questions dealt with in this book. The book also describes the nature and development of bones and teeth, and some of the methods used in zoo-archaeology.
