WILKINSON Patients with frequent or daily headaches pose a very difficult problem for the physician who has to treat them, particularly as many patients think that there should be a medicine or medicines which give them instant relief. In the search for the compound which would meet this very natural desire, many drugs have been manufactured and the temptation for the physician is either to increase the dose of a drug which seems to be, at any rate, partially effective, or to add one or more drugs to those which the patient is already taking. Although there have been some references to the dangers of overdosage of drugs for migraine in the past, it was not until relatively recently that it was recognized that drugs given for the relief of headache, if taken injudiciously, may themselves cause headache. The first drugs to be implicated in this way were ergotamine and phenazone. In the case of ergotamine tartrate, the dangers of ergotism were well known as this was a disorder which had been known and written about for many years. In the treatment of headache, fully blown ergotism is rare and in recent years has usually been due to self-medication in doses much greater than those prescribed although there are a few recorded cases where toxic amounts have been given. **Innovations Through Information Technology 2004** Information Resources Management Association International Conference, New Orleans, Louisiana, USA, May 23-26, 2004 *IGI Global* Innovations Through Information Technology aims to provide a collection of unique perspectives on the issues surrounding the management of information technology in organizations around the world and the ways in which these issues are addressed. From Dissertation to Book, Second Edition *University of Chicago Press* When a dissertation crosses my desk, I usually want to grab it by its metaphorical lapels and give it a good shake. "You know something!" I would say if it could hear me. "Now tell it to us in language we can understand!" Since its publication in 2005, *From Dissertation to Book* has helped thousands of young academic authors get their books beyond the thesis committee and into the hands of interested publishers and general readers. Now revised and updated to reflect the evolution of scholarly publishing, this edition includes a new chapter arguing that the future of academic writing is in the hands of young scholars who must create work that meets the broader expectations of readers rather than the narrow requirements of academic committees. At the heart of *From Dissertation to Book* is the idea that revising the dissertation is fundamentally a process of shifting its focus from the concerns of a narrow audience—a committee or advisors—to those of a broader scholarly audience that wants writing to be both informative and engaging. William Germano offers clear guidance on how to do this, with advice on such topics as rethinking the table of contents, taming runaway footnotes, shaping chapter length, and confronting the limitations of jargon, alongside helpful timetables for light or heavy revision. Germano draws on his years of experience in both academia and publishing to show writers how to turn a dissertation into a book that an audience will actually enjoy, whether reading on a page or a screen. Germano also acknowledges that not all dissertations can or even should become books and explores other, often overlooked, options, such as turning them into journal articles or chapters in an edited work. With clear directions, engaging examples, and an eye for the idiosyncrasies of academic writing, *From Dissertation to Book* reveals to recent PhDs the secrets of careful and thoughtful revision—a skill that will be truly invaluable as they add "author" to their curriculum vitae. Building Something Better Environmental Crises and the Promise of Community Change *Rutgers University Press* As the turmoil of interlinked crises unfolds across the world—from climate change to growing inequality to the rise of authoritarian governments—social scientists examine what is happening and why. Can communities devise alternatives to the systems that are doing so much harm to the planet and people? Sociologists Stephanie A. Malin and Meghan Elizabeth Kallman offer a clear, accessible volume that demonstrates the ways that communities adapt in the face of crises and explains that sociology can help us understand how and why they do this challenging work. Tackling neoliberalism head-on, these communities are making big changes by crafting distributive and regenerative systems that depart from capitalist approaches. The vivid case studies presented range from activist water protectors to hemp farmers to renewable energy cooperatives led by Indigenous peoples and nations. Alongside these studies, Malin and Kallman present incisive critiques of colonialism, extractive capitalism, and neoliberalism, while demonstrating how sociology's own disciplinary traditions have been complicit with those ideologies—and must expand beyond them. Showing that it is possible to challenge social inequality and environmental degradation by refusing to continue business-as-usual, *Building Something Better* offers both a call to action and a dose of hope in a time of crises. Growth for Good Reshaping Capitalism to Save Humanity from Climate Catastrophe *Harvard University Press* The current model of economic expansion driven by fossil fuels is unsustainable, leading many to toy with the idea of ditching growth to save the planet.
