Reducing the Odds

Preventing Perinatal Transmission of HIV in the United States

National Academies Press Thousands of HIV-positive women give birth every year. Further, because many pregnant women are not tested for HIV and therefore do not receive treatment, the number of children born with HIV is still unacceptably high. What can we do to eliminate this tragic and costly inheritance? In response to a congressional request, this book evaluates the extent to which state efforts have been effective in reducing the perinatal transmission of HIV. The committee recommends that testing HIV be a routine part of prenatal care, and that health care providers notify women that HIV testing is part of the usual array of prenatal tests and that they have an opportunity to refuse the HIV test. This approach could help both reduce the number of pediatric AIDS cases and improve treatment for mothers with AIDS. Reducing the Odds will be of special interest to federal, state, and local health policymakers, prenatal care providers, maternal and child health specialists, public health practitioners, and advocates for HIV/AIDS patients. Reducing Birth Defects

Meeting the Challenge in the Developing World

National Academies Press Each year more than 4 million children are born with birth defects. This book highlights the unprecedented opportunity to improve the lives of children and families in developing countries by preventing some birth defects and reducing the consequences of others. A number of developing countries with more comprehensive health care systems are making significant progress in the prevention and care of birth defects. In many other developing countries, however, policymakers have limited knowledge of the negative impact of birth defects and are largely unaware of the affordable and effective interventions available to reduce the impact of certain conditions. Reducing Birth Defects: Meeting the Challenge in the Developing World includes descriptions of successful programs and presents a plan of action to address critical gaps in the understanding, prevention, and treatment of birth defects in developing countries. This study also recommends capacity building, priority research, and institutional and global efforts to reduce the incidence and impact of birth defects in developing countries.

Principles of Perinatal and Pediatric HIV/AIDS

Wife Goes On This book is a comprehensive, reliable, up-to-date reference focused on evidence-based, practical information that is required not only to prevent transmission of HIV to children, but also provide holistic care for the infected child. Discusses extensively all the major issues and provides a holistic approach on prevention, care and management of children infected/affected with HIV/AIDS. This book focuses on evidence-based practical information and recent advances in the field and emphasizes on prevention with special reference to mother-to-child transmission of HIV/AIDS. Chapters contributed by the Who's Who in the field from across the world. This book is useful for hospitals, institutions, governmental and non-governmental organizations involved in caring for children and all practicing physicians, clinicians, pediatricians, obstetricians, family doctors and postgraduate students.

Perinatal AIDS

Prevention of mother-to-child transmission of hepatitis B virus (HBV)

guidelines on antiviral prophylaxis in pregnancy

World Health Organization WHO estimates that in 2015, 257 million people were living with chronic hepatitis B virus (HBV) infection worldwide, and that 900 000 had died from HBV infection, mostly as a result of cirrhosis or hepatocellular carcinoma. Most HBV-associated deaths among adults are secondary to infections acquired at birth or in the first five years of life. In May 2016, the World Health Assembly endorsed the Global health sector strategy on viral hepatitis, which calls for the elimination of viral hepatitis as a public health threat by 2030 (defined as a 90% reduction in incidence of new infections and a 65% reduction in mortality). Elimination of HBV infection as a public health threat requires a reduction in the prevalence of hepatitis B surface antigen (HBsAg) to below 0.1% in children 5 years of age. This can be achieved through universal immunization of newborns against hepatitis B and other interventions to prevent mother-to-child transmission of HBV. These guidelines provide evidence-based guidance on the use of peripartum antiviral prophylaxis in HBsAg-positive pregnant women for the prevention of mother-to-child transmission of HBV.

The Development of Children and Adolescents

An Applied Perspective

John Wiley & Sons The Development of Children and Adolescents, by Penny Hauser-Cram, J. Kevin Nugent, Kathleen Thies, and John F. Travers, provides an integrated view of child development. Presenting the most pertinent research for each developmental stage and linking this to practical applications in the areas of Parenting, Policy, and Practice, this balanced approach emphasizes the relationship between research and theory and applications. The rich media program, including WileyPLUS with Real Development promotes active learning and allows for increased understanding and comprehension of the course content. Real Development, authored by Nicole Barnes, Ph.D., Montclair State University and Christine Hatchard, Psy.D., Monmouth University, uses authentic video showcasing real families, along with activities and assessments that put students in the place of a professional, to gain an understanding of key concepts. Through the combination of text and media, students are engaged in meaningful learning that deepens and enriches their understanding of developmental concepts. WileyPLUS sold separately from text.

HIV/AIDS Treatment and Care Clinical Protocols for the WHO European Region

The WHO Regional Office for Europe has combined its 13 protocols on treatment of and care for people with HIV and AIDS in one volume. The protocols are the cornerstone of the strategic actions that WHO has taken as part of its contribution to achieving the goal of universal access to HIV/AIDS prevention, treatment, care and support services. The protocols were specifically developed for the entire WHO European Region. Together, they represent a comprehensive and evidence-based tool that offers health professionals clear and specific advice on diagnosing and managing a wide range of health issues related to HIV/AIDS for adults, adolescents and children, including antiretroviral treatment, the management of opportunistic infections, tuberculosis, hepatitis, injecting drug use, sexual and reproductive health, the prevention of mother-to-child HIV transmission, immunization, palliative care and post-exposure prophylaxis. Children and Young People Living with HIV/AIDS A Cross-Cultural Perspective

Springer This book focuses on the issues encountered by children and young people who are living with HIV/AIDS. It examines their lived experiences associated with HIV/AIDS, and studies groups of children and youngsters from around the globe. Connecting empirical information with real-life situations, the book brings together results from empirical research that relates to these children and young people. Its chapters can be used as evidence for health care providers to implement socially and culturally appropriate services to assist individuals and groups of children and young people who are living with HIV/AIDS in many societies. Many of these young people are from the most marginalized and vulnerable groups; and many have been orphaned by the death of their HIV-positive parents. Marginalized young people such as refugees, migrants and street children are most at risk due to the use of illicit drugs, their exposure to unprotected sex (in exchange for food, money and protection), and stigma associated with their marginalized lives. The impact that HIV/AIDS has on the opportunities for these young people to be able to lead healthy adult lives is considerable. This book gives a voice to these children and young people and advances our understanding of their lived experiences and needs.

HIV/AIDS in the Post-HAART Era Manifestations, Treatment, and Epidemiology

PMPH-USA The science of the virus and its effects and the clinical approaches to its treatment and transmission prevention are placed in the context of the history and epidemiology of the HIV/AIDS pandemic. Each organ system of the body is explored as to manifestations of the disease, treatment now and in the future, as well as what the disease has taught us about the immune response. The science of epidemiology, which is so important in allowing for tracking of the disease and potential limitation of transmission, is another aspect of AIDS explored in detail. The pandemic manifests differently in different parts of the world, and the relevance of the volume is enhanced by its international group of contributors. No other text provides the historical and epidemiological context of this disease along with an update of diagnosis and treatment. The underlying science and epidemiology of AIDS are not neglected, so the student or clinician who is treating patients with AIDS can gain a full understanding of HIV/AIDS in individual patients and in their communities.

Varney's Midwifery

Jones & Bartlett Publishers The gold standard for midwives and students is back with Varney's Midwifery, Fifth Edition. New to this edition are chapters describing the profession of midwifery, reproductive physiology, clinical genetics, and support for women in labor. Interwoven throughout is information on primary care, gynecology, maternity care, and neonatal care. With chapters written by a variety of expert midwives and an increased emphasis on reproductive anatomy and physiology, this new edition assists students and clinicians in understanding not only what to do but why. Updated to reflect evidence-based care, this edition also discusses the pathophysiology of various conditions in the context of normal changes in the reproductive cycle. Also included are numerous new anatomical and clinical illustrations. In this edition, the skills chapters have been significantly revised and reformatted into relevant chapter appendices to help students, new midwives, and international readers learn essential skills in sequential steps. These critical midwifery skills include performing a pelvic examination, hand maneuvers for birth, delivery of a fetus in breech presentation, and current evidence-based steps for managing a postpartum hemorrhage. New Chapters Include: * Professional Midwifery Today * Mental Health Conditions * Breast Conditions * Anatomy and Physiology of the Female Reproductive System * Physiologic Changes in Pregnancy and Fetal Development * Genetics * Anatomy and Physiology of Pregnancy: Placental, Fetal, and Maternal Adaptations * Support for Women in Labor * Anatomy and Physiology of Postpartum * Anatomy and Physiology of the Newborn

Management of Common Problems in Obstetrics and Gynecology

John Wiley & Sons This practical book provides current and effective evaluation and treatment options currently available for the full spectrum of conditions affecting women. In easy to consume, bite-sized chapters, it ranges from diseases occurring during pregnancy and the perinatal period, through general gynecologic conditions from childhood to old age, gynecologic urology, oncology, reproductive medicine and family planning.

Reproductive Justice: A Global Concern

ABC-CLIO Every woman in the world has the right to control her own body, plan her family, receive good quality medical care, and give birth to a healthy baby. This book takes a comprehensive look at the status of women's reproductive rights from a transnational, human-rights perspective. • Contributions from 25 distinguished international scholars with research, practice, and public policy expertise on reproductive rights • Bibliography with each chapter • Concluding chapter on international public policy

Viral Infections of Humans

Epidemiology and Control

Springer Striking changes have occurred in the world since the publication of the last edition of *Viral Infections of Humans*. The global population is rapidly approaching 8 billion; climate change is leading to the introduction of new hosts, vectors and virus diseases heretofore never seen in many parts of the world; technological advances have revolutionized the ability to recognize and characterize viruses new and old; vaccines are altering the epidemiological landscape of the diseases they target, in some cases raising the hope of their eradication and remarkably powerful computational tools are enabling not only detection of outbreaks of disease much sooner than in the past but also, through complex mathematical modeling, more accurate prediction of their potential impact. The new Fifth Edition of *Viral Infections of Humans* captures the both the excitement and frustration of the dynamic struggle between humankind and the viruses that continue to cause immense suffering. It presents the latest concepts, methods and technologies in epidemiology, detection, investigation, modeling and intervention. Updated and entirely new chapters by dozens of experts across the field provide analytic summaries of current knowledge of viruses and prions causing acute syndromes, chronic illnesses and/or malignancies. In sum, this ambitiously expanded volume offers a uniquely comprehensive perspective on viruses in humans, from agents of classic diseases (e.g., hepatitis, measles, polio, rabies and yellow fever), to those with greatest pandemic impact (e.g., influenza and human immunodeficiency virus), to those discovered relatively recently (e.g., henipavirus, metapneumovirus and norovirus). The new Fifth Edition of *Viral Infections of Humans* is an invaluable reference for students, fellows and established professionals in the fields of microbiology, public health and infectious disease epidemiology, medicine and health policy.

Nutrition and HIV

Epidemiological Evidence to Public Health

CRC Press The world continues to lose more than a million lives each year to the HIV epidemic, and nearly two million individuals were infected with HIV in 2017 alone. The new Sustainable Development Goals, adopted by countries of the United Nations in September 2015, include a commitment to end the AIDS epidemic by 2030. Considerable emphasis on prevention of new infections and treatment of those living with HIV will be needed to make this goal achievable. With nearly 37 million people now living with HIV, it is a communicable disease that behaves like a noncommunicable disease. Nutritional management is integral to comprehensive HIV care and treatment. Improved nutritional status and weight gain can increase recovery and strength of individuals living with HIV/AIDS, improve dietary diversity and caloric intake, and improve quality of life. This book highlights evidence-based research linking nutrition and HIV and identifies research gaps to inform the development of guidelines and policies for the United Nations' Sustainable Development Goals. A comprehensive approach that includes nutritional interventions is likely to maximize the benefit of antiretroviral therapy in preventing HIV disease progression and other adverse outcomes in HIV-infected men and women. Modification of nutritional status has been shown to enhance the quality of life of those suffering HIV/AIDS, both physically in terms of improved body mass index and immunological markers, and psychologically, by improving symptoms of depression. While the primary focus for those infected should remain on antiretroviral treatment and increasing its availability and coverage, improvement of nutritional status plays a complementary role in the management of HIV infection.

Encyclopedia of Primary Prevention and Health Promotion

Springer Science & Business Media Foundational topics such as history, ethics, and principles of primary prevention, as well as specific issues such as consultation, political issues, and financing. The second section addresses such topics as abuse, depression, eating disorders, HIV/AIDS, injuries, and religion and spirituality often dividing such topics into separate entries addressing childhood, adolescence, and adulthood.

Neonatology

A Practical Approach to Neonatal Diseases

Springer Science & Business Media This new textbook wants to offer to neonatologists and pediatricians a modern and complete view of the various problems and aspects of neonatology, currently one of the most complex and advanced fields of pediatrics. The first chapters will be dedicated to the epidemiology of neonatal mortality and morbidity and to the conditions responsible for neonatal risk. A section will be devoted to organizational problems of hospitals and home services for efficient modern neonatal and infant care. Particular attention will be paid to neonatal care, medico-legal questions, examination of newborns and current availability of laboratory facilities and instrumentation for identification of perinatal abnormalities. Neonatal nutritional problems will also be examined, outlining current knowledge of the needs of sick and healthy babies. Conditions jeopardizing fetal health such as diabetes, maternal drug abuse and smoking will be discussed. New advances in neonatal pharmacology will be extensively examined. Various diseases of the neonate involving lungs, heart, gastrointestinal tract, blood, immune system, endocrine system and kidneys will be also expounded in special chapters. Fetal and neonatal infections will be extensively discussed. Fetal and neonatal neurological abnormalities will be discussed by highly specialized authors. There will be chapters on neonatal ophthalmology, dermatology and orthopedics. Each chapter has been written by a well recognized international expert in his or her field. As the opinion leader in their field, the Author is responsible for giving the most up-to-date information in terms of what is known, what is still being researched, and what has become evidence based medicine. Underlying causes and mechanisms of neonatal diseases will be presented in an immediate form. The use of summaries, tables, and accurately selected guidelines or recommendations that will accompany the text will supply quick references and instant solutions to the concerned neonatologists during their daily practice.

HIV and Breastfeeding

The untold story

Pinter & Martin In the early 1980s it was discovered that HIV, the virus that causes AIDS, could be passed through a mother's milk to her baby. Almost overnight in the industrialised countries, and later in the African countries most ravaged by HIV, breastfeeding became an endangered practice. But in the rush to reduce transmission of HIV, everything we already knew about breastfeeding's life-saving effects was overlooked, with devastating consequences for mothers and babies. In *HIV and Breastfeeding: the untold story*, former IBCLC Pamela Morrison, an acknowledged authority on HIV and breastfeeding, reveals how women in the world's most poverty-stricken areas were persuaded to abandon breastfeeding as part of a short-sighted and deadly policy that led to a humanitarian disaster. The dilemma that breastfeeding, an act of nurturing which confers food, comfort and love, could be at once life-saving yet lethal, has been called 'the ultimate paradox'. This critical account reveals how vital breastfeeding is, even in the most difficult of circumstances, and examines the lessons that can be learned from the mistakes of the past - which is particularly relevant as we deal with the consequences for mothers and babies of another global pandemic, Covid-19. With detailed information for HIV-positive mothers and their caregivers, and success stories from mothers themselves, this book is essential reading for anyone involved in protecting and supporting breastfeeding, or with a need for evidence-based information about breastfeeding and HIV.

HIV Infection in Children and Adolescents

Springer Nature This book serves as a reference work on pediatric HIV infection and covers the full bandwidth of topics from an introduction to pathogenesis and epidemiology, over the transmission of the HI virus, to clinical manifestations, treatment, and prevention strategies. Diseases and disorders occurring in HIV infected persons are discussed in detail. The book covers special populations, such as neonates born to an HIV positive mother and adolescents and examines the specific ways of managing HIV disease in these patient groups. This is the first book to cover palliative care as well as ethical, legal and social issues of HIV infection.

Consolidated Guidelines on the Use of Antiretroviral Drugs for Treating and Preventing HIV Infection

Recommendations for a Public Health Approach

These guidelines provide guidance on the diagnosis of human immunodeficiency virus (HIV) infection, the use of antiretroviral (ARV) drugs for treating and preventing HIV infection and the care of people living with HIV. They are structured along the continuum of HIV testing, prevention, treatment and care. This edition updates the 2013 consolidated guidelines on the use of antiretroviral drugs following an extensive review of evidence and consultations in mid-2015, shared at the end of 2015, and now published in full in 2016. It is being published in a changing global context for HIV and for health more broadly.

Care of Adults with Chronic Childhood Conditions

A Practical Guide

Springer This book addresses the unique healthcare needs of adults with chronic childhood illnesses. It presents a model of primary and secondary prevention for emerging adulthood—primary prevention in which all young adults are screened for high-risk behaviors and health needs and secondary prevention in which young adults with chronic childhood conditions are optimized through coordinated care, connections to community resources and social/family support. This book is organized in five parts. Part I provides a detailed overview of the health care transition from pediatrics to adult medicine from both a policy and practice perspective. In Part II, the concept of emerging adulthood as a developmental period is explored and strategies for providing improved comprehensive care for this age group are discussed. Part III reviews specific chronic childhood conditions, such as attention-deficit/hyperactivity disorder, autism, cystic fibrosis, and diabetes mellitus, and offers clinical cases and summary reports that can be used as a quick guides to each condition. In Part IV, additional clinical considerations that are not necessarily condition-specific but are highly relevant to the care of young adults with chronic childhood conditions are examined. Part V describes the socio-legal issues involved in caring for this population. Care of Adults with Chronic Childhood Conditions provides primary care providers with a new framework for the care of young adults and identifies opportunities to influence patient health outcomes over a life trajectory.

Neonatal-Perinatal Infections: An Update, An Issue of Clinics in Perinatology,

Elsevier Health Sciences In this issue the Guest Editors provide a contemporary look at the epidemiology, clinical manifestations, treatment and outcomes for neonatal-perinatal infections. Contributors include neonatologists, infectious disease, and critical care specialists with a wide variety of research interests in this arena. Readers will be exposed to the latest information on dosing of antibiotics, antivirals, and antifungals. This information is critical in the infant population given the rapid changes in physiology, metabolic pathways and renal elimination that occur over the first months of life. There is an extensive examination of infectious processes that commonly present in infants including meningitis, bloodstream infections, and urinary tract infections. Additional topics include infectious processes affecting the newborn (chorioamnionitis and TORCH infections) and premature infants (necrotizing enterocolitis). Specific pathogens are highlighted in articles on HSV, CMV/VZV, staphylococcal species, and Candida. Finally, the rationale for the most recent changes to guidelines for initiating therapy for early-onset neonatal sepsis are reviewed.
