Advancing Obesity Solutions Through Investments in the Built Environment

Proceedings of a Workshop

National Academies Press *The built environment—the physical world made up of the homes, buildings, streets, and infrastructure within which people live, work, and play—underwent changes during the 20th and 21st centuries that contributed to a sharp decline in physical activity and affected access to healthy foods. Those developments contributed in turn to the weight gain observed among Americans in recent decades. Many believe, therefore, that policies and practices that affect the built environment could affect obesity rates in the United States and improve the health of Americans. The National Academies of Sciences, Engineering, and Medicine convened a workshop in September 2017 to improve understanding of the roles played by the built environment in the prevention and treatment of obesity and to identify promising strategies in multiple sectors that can be scaled up to create more healthful and equitable environments. This publication summarizes the presentations and discussions from the workshop.*

Understanding Environmental Pollution

Cambridge University Press The third edition of this well-received textbook delivers a concise overview of global and individual environmental pollution for undergraduate courses, presenting students with the tools to assess environmental issues. With more than thirty percent new material, Hill assesses pollution from an international perspective, including air and water pollution, global warming, energy, solid and hazardous waste, and pollution at home. Both the sources and impacts of pollution are addressed, as well as governmental, corporate, and personal responsibility for pollution, and pollution prevention is emphasized throughout. Non-technical language encourages greater understanding of these often complex issues, and thought-provoking 'Delving Deeper' exercises are included, increasing engagement with the text and enabling students to apply what they have learned. A new chapter on the chemistry basics of pollution links to sections on toxicology and risk assessment, helping

students understand concerns over chemicals and their regulation. An essential review of environmental pollution for environmental science students.

Cognitive Science in Education and Alternative Teaching Strategies

Cambridge Scholars Publishing Cognitive science deals with such questions as 'How do we think?' and 'How do we learn, memorize, dream?'. It tackles the subject of human mentality by connecting discoveries from a range of disciplines that shed light on cognitive occurrences and the learning process. Cognitive science unites the fields of neuroscience, psychology, philosophy, linguistics, artificial intelligence, and social sciences. This book, aimed mostly at teachers, will provoke cognitive dissonance and intellectual unease, as it explores cognitive theories and allows teachers to update and internalise their 'in-head theories', embedded from their own school years. In order for this to happen, this volume provides information on new experiences of alternative teaching practices. Creating conditions for gaining these teaching experiences is the primary function and fundamental mission of politics in the field of education.

Encounters in Thought

Beyond Instrumental Reason

Wipf and Stock Publishers Thinking is a dynamic process resulting from practices of integration. Thought encounters in openness, wonder, receptivity, and contemplation confer upon us intellectual work that is uniquely our own. Digital patterns, however, distract us from these creative encounters. Our intellectual searching is weakened and fragmented by frenetic consumption of information. We miss out on reason's innate pull toward integration and concrete reality. This book is an invitation to enter into openness, wonder, receptivity, and contemplation with deeper understanding and intentionality. We can do this by considering exemplars, persons who lived out the integrity of their hard-won beliefs. Each process of integration is applied also, so that practical knowledge and practice become a way into this intellectual restoration. We need deeper knowledge won in the slow orbit of encounters. Encounters in thought are precisely what each generation needs to apprehend the cosmos, nature, authority, truth, and moral action. Responsibility to this ecologic age requires a reform of reason; this book is just one attempt to convey a way toward this restoration.

Sustainable Ho Chi Minh City: Climate Policies for Emerging Mega Cities

Springer As climate change and urban development are closely interlinked and often interact negatively, this edited volume takes Ho Chi Minh City (HCMC), Vietnam's first mega-urban region as a case study to analyse its vulnerability to climate change and to suggest measures towards a more sustainable urban development. The book offers an overview on land use planning regarding the aspects of urban flooding, urban climate, urban energy and urban mobility as well as spatial views from the angle of urban planning such as the metropolitan level, the city, the neighbourhood and building level. It shows that to a significant degree, measures dealing with climate change can be taken from the toolbox of sustainable urban development and reflects how institutional structures need to change to enhance chances for implementation given socio-cultural and economic constraints. This is merged and integrated into a holistic perspective of planning recommendations, supporting the municipal government to increase its adaptive capacity. The authors are members of a German government funded research project on how to support HCMC's municipal government to adapt to risks related to climate change.

Managing in a VUCA World

Springer This book examines volatility, uncertainty, complexity and ambiguity (VUCA) and addresses the need for broader knowledge and application of new concepts and frameworks to deal with unpredictable and rapid changing situations. The premises of VUCA can shape all aspects of an organization. To cover all areas, the book is divided into six sections. Section 1 acts as an introduction to VUCA and complexity. It reviews ways to manage complexity, while providing examples for tools and approaches that can be applied. The main focus of Section 2 is on leadership, strategy and planning. The chapters in this section create new approaches to handle VUCA environments pertaining to these areas including using the Tetralemma logics, tools from systemic structural constellation (SySt) approach of psychotherapy and organizational development, to provide new ideas for the management of large strategic programs in organizations. Section 3 considers how marketing and sales are affected by VUCA, from social media's influence to customer value management. Operations and cost management are highlighted in Section 4. This section covers VUCA challenges within global supply chains and decision-oriented controlling. In Section 5 organizational structure and process management are showcased, while Section 6 is dedicated to addressing the effects of VUCA in IT, technology and data management. The VUCA forces present businesses with the need to move from linear modes of thought to problem solving with synthetic and simultaneous thinking. This book should help to provide some starting points and ideas to deal with the next era. It should not be understood as the end of the road, but as the beginning of a journey exploring and developing new concepts for a new way of management.

IBM System Storage Open Systems Tape Encryption Solutions

IBM Redbooks This IBM® Redbooks® publication discusses IBM System Storage Open Systems Tape Encryption solutions. It specifically describes Tivoli Key Lifecycle Manager (TKLM) Version 2, which is a Java software program that manages keys enterprise-wide and provides encryption-enabled tape drives with keys for encryption and decryption. The book explains various methods of managing IBM tape encryption. These methods differ in where the encryption policies reside, where key management is performed, whether a key manager is required, and if required, how the tape drives communicate with it. The security and accessibility characteristics of encrypted data create considerations for clients which do not exist with storage devices that do not encrypt data. Encryption key material must be kept secure from disclosure or use by any agent that does not have authority to it; at the same time it must be accessible to any agent that has both the authority and need to use it at the time of need. This book is written for readers who need to understand and use the various methods of managing IBM tape encryption.
