MRI FROM PICTURE TO PROTON

Cambridge University Press **MRI from Picture to Proton** presents the basics of MR practice and theory in a unique way: backwards! The subject is approached just as a new MR practitioner would encounter MRI: starting from the images, equipment and scanning protocols, rather than pages of physics theory. The reader is brought face-to-face with issues pertinent to practice immediately, filling in the theoretical background as their experience of scanning grows. Key ideas are introduced in an intuitive manner which is faithful to the underlying physics but avoids the need for difficult or distracting mathematics. Additional explanations for the more technically inquisitive are given in optional secondary text boxes. The new edition is fully up-dated to reflect the most recent advances, and includes a new chapter on parallel imaging. Informal in style and informed in content, written by recognized effective communicators of MR, this is an essential text for the student of MR.

CALCULUS... FEAR NO MORE

A REVIEW AND REFERENCE FOR COLLEGE AND UNIVERSITY COURSES

PHYSICS FOR COMPUTER SCIENCE STUDENTS

WITH EMPHASIS ON ATOMIC AND SEMICONDUCTOR PHYSICS

Springer Science & Business Media This text is the product of several years' effort to develop a course to fill a specific educational gap. It is our belief that computer science students should know how a computer works, particularly in light of rapidly changing technologies. The text was designed for computer science students who have a calculus background but have not necessarily taken prior physics courses. However, it is clearly not limited to these students. Anyone who has had first-year physics can start with Chapter 17. This includes all science and engineering students who would like a survey course of the ideas, theories, and experiments that made our modern electronics age possible. This textbook is meant to be used in a two-semester sequence. Chapters 1 through 16 can be covered during the first semester, and Chapters 17 through 28 in the second semester. At Queens College, where preliminary drafts have been used, the material is presented in three lecture periods (50 minutes each) and one recitation period per week, 15 weeks per semester. The lecture and recitation are complemented by a two-hour laboratory period per week for the first semester and a two-hour laboratory period biweekly for the second semester.

THE PAST BEFORE US

Harvard University Press The claim that India--uniquely among civilizations--lacks historical writing distracts us from a more pertinent question: how to recognize the historical sense of societies whose past is recorded in ways very different from European conventions. Romila Thapar, a distinguished scholar of ancient India, guides us through a panoramic survey of the historical traditions of North India, revealing a deep and sophisticated consciousness of history embedded in the diverse body of classical Indian literature. The history recorded in such texts as the Ramayana and the Mahabharata is less concerned with authenticating persons and events than with presenting a picture of traditions striving to retain legitimacy amid social change. Spanning an epoch from 1000 BCE to 1400 CE, Thapar delineates three strains of historical writing: an Itihasa-Purana tradition of Brahman authors; a tradition composed mainly by Buddhist and Jaina monks and scholars; and a popular bardic tradition. The Vedic corpus, the epics, the Buddhist canon and monastic chronicles, inscriptional evidence, regional accounts, and literary forms such as royal biographies and drama are all scrutinized afresh--not as sources to be mined for factual data but as genres that disclose how Indians of ancient times represented their own past to themselves.

BILLION DOLLAR BRAND CLUB

HOW DOLLAR SHAVE CLUB, WARBY PARKER, AND OTHER DISRUPTORS ARE REMAKING WHAT WE BUY

Henry Holt and Company A leading business journalist takes us inside a business revolution: the upstart brands taking on the empires that long dominated the trillion-dollar consumer economy. Dollar Shave Club and its hilarious marketing. Casper mattresses popping out of a box. Third Love's lingerie designed specifically for each woman's body. Warby Parker mailing you five pairs of glasses to choose from. You've seen their ads. You (or someone you know) use their products. Each may appear, in isolation, as a rare David with the bravado to confront a Goliath, but taken together they represent a seismic shift in a business model that has lasted more than a century. As Lawrence Ingrassia--former business and economics editor and deputy managing editor at the New York Times--shows in this timely and eye-opening book, a growing number of digital entrepreneurs have found new and creative ways to crack the code on the bonanza of physical goods that move through our lives every day. They have discovered that manufacturing, marketing, logistics, and customer service have all been flattened—where there were once walls that protected big brands like Gillette, Sealy, Victoria's Secret, or Lenscrafters, savvy and hungry innovators now can compete on price, value, quality, speed, convenience, and service. Billion Dollar Brand Club reveals the world of the entrepreneurs, venture capitalists, and corporate behemoths battling over this terrain. And what fun it is. It's a massive, high-stakes business saga animated by the personalities, flashes of insight, and stories behind the stuff we use every day.
