#### BMW BOXER TWINS

---

Haynes Publications For nearly 80 years, shaft-drive boxer twins have traditionally formed the backbone of the BMW motorcycle line-up. For many enthusiasts of the Bavarian marque the classic BMW twin was the R90S of 1973-76. Over the decades, successive generations of durable machines - including the R100S, fully-faired R100RS, four-cylinder K-series, high-performance R1100RS and an entire family of touring and sporting models ranging from 850 to 1200cc - would ensure the BMW boxer twins a place in the Haynes "Great Bikes" series. This book covers: historical context, racing, the wartime R75 and R69S; the "75" series which enabled BMW to compete with the high-performance Japanese machines; the R90S, the "76" and Superbike performance; the R100RS, the "77" and the touring R100RT; smaller twins, smaller potential; the R89G/S, including a Paris-Dakar version; rationalization of the boxer range, and the new twins that included four-valve heads and electronic engine management; and technical specifications from 1969 to 2003.

#### **SAVING NORMAL**

---

---

#### **AN INSIDER'S REVOLT AGAINST OUT-OF-CONTROL PSYCHIATRIC DIAGNOSIS, DSM-5, BIG PHARMA, AND THE MEDICALIZATION OF ORDINARY LIFE**

---

Harper Collins From "the most powerful psychiatrist in America" (New York Times) and "the man who wrote the book on mental illness" (Wired), a deeply fascinating and urgently important critique of the widespread medicalization of normality Anyone living a full, rich life experiences ups and downs, stresses, disappointments, sorrows, and setbacks. These challenges are a normal part of being human, and they should not be treated as psychiatric disease. However, today millions of people who are really no more than "worried well" are being diagnosed as having a mental disorder and are receiving unnecessary treatment. In Saving Normal, Allen Frances, one of the world's most influential psychiatrists, warns that mislabeling everyday problems as mental illness has shocking implications for individuals and society: stigmatizing a healthy person as mentally ill leads to unnecessary, harmful medications, the narrowing of horizons, misallocation of medical resources, and draining of the budgets of families and the nation. We also shift responsibility for our mental well-being away from our own naturally resilient and self-healing brains, which have kept us sane for hundreds of thousands of years, and into the hands of "Big Pharma," who are reaping multi-billion-dollar profits. Frances cautions that the new edition of the "bible of psychiatry," the Diagnostic and Statistical Manual of Mental Disorders-5 (DSM-5), will turn our current diagnostic inflation into hyperinflation by converting millions of "normal" people into "mental patients." Alarming, in DSM-5, normal grief will become "Major Depressive Disorder"; the forgetting seen in old age is "Mild Neurocognitive Disorder"; temper tantrums are "Disruptive Mood Dysregulation Disorder"; worrying about a medical illness is "Somatic Symptom Disorder"; gluttony is "Binge Eating Disorder"; and most of us will qualify for adult "Attention Deficit Disorder." What's more, all of these newly invented conditions will worsen the cruel paradox of the mental health industry: those who desperately need psychiatric help are left shamefully neglected, while the "worried well" are given the bulk of the treatment, often at their own detriment. Masterfully charting the history of psychiatric fads throughout history, Frances argues that whenever we arbitrarily label another aspect of the human condition a "disease," we further chip away at our human adaptability and diversity, dulling the full palette of what is normal and losing something fundamental of ourselves in the process. Saving Normal is a call to all of us to reclaim the full measure of our humanity.

#### **MANUFACTURING PROCESSES 4**

---

---

#### **FORMING**

---

Springer Science & Business Media This book provides essential information on metal forming, utilizing a practical distinction between bulk and sheet metal forming. In the field of bulk forming, it examines processes of cold, warm and hot bulk forming, as well as rolling and a new addition, the process of thixoforming. As for the field of sheet metal working, on the one hand it deals with sheet metal forming processes (deep drawing, flange forming, stretch drawing, metal spinning and bending). In terms of special processes, the chapters on internal high-pressure forming and high rate forming have been revised and refined. On the other, the book elucidates and presents the state of the art in sheet metal separation processes (shearing and fineblanking). Furthermore, joining by forming has been added to the new edition as a new chapter describing mechanical methods for joining sheet metals. The new chapter "Basic Principles" addresses both sheet metal and bulk forming, in addition to metal physics, plastomechanics and computational basics; these points are complemented by the newly added topics of metallography and analysis, materials and processes for testing, and tribology and lubrication techniques. The chapters are supplemented by an in-depth description of modern numeric methods such as the finite element method. All chapters have been updated and revised for the new edition, and many practical examples from modern manufacturing processes have been added.

---

Veloce Publishing There are lots of books about the classic BMW Boxers; their history, performance, lineage, and the minutiae of its specification. But none of them concentrate entirely on telling you what to look for when buying one secondhand. That's what this book is about - it is a straightforward, practical guide to buying a used Boxer twin. It doesn't list all the correct colour combinations for each year or analyse the bike's design philosophy - there are excellent books listed at the end of this one that do all of that - but it will help you avoid buying a dud. Point by point, it takes the reader through everything that needs looking at when buying a Boxer, plus spares prices, which is the best model to buy for your needs, and a look at auctions, restorations and paperwork The last of the 'classic' air-cooled Boxer twins, these bikes are now collector's items, and many have been saved, restored and continue to be ridden - this book tells the reader how to be part of the Boxer's ongoing story.

**STRENGTHENING AND JOINING BY PLASTIC DEFORMATION**

---

**SELECT PAPERS FROM AIMTDR 2016**

---

Springer This book focuses on strengthening and joining materials by means of plastic deformation, gathering extended research papers presented at the AIMTDR 2016 conference. Plastic deformation is used in materials processing to improve the strength of the material. For example, the rod/screw used to connect the cooker handle to the main body has to be strong and sustainable; such rods can be strengthened by plastic deformation (using multi-stage forming operations etc.). Similarly, joining by means of plastic deformation is highly valuable since it avoids the material and environmental degradation often caused by fusion welding processes. The book discusses various processing techniques in which plastic deformation is used to strengthen materials - e.g. in equal channel angular extrusion, autofrettage etc., or to join materials without melting them - e.g. in friction stir processing, riveting etc. Offering an extensive guide, the book includes chapters on roll bonding, equal channel angular pressing, autofrettage, friction stir processing/welding, magnetic pulse welding, and riveting - processes used to strengthen and join a variety of materials for lightweight applications and sustainable manufacturing. The contents of this book will be useful to researchers and practitioners alike.

**MOLECULAR IMAGING: COMPUTER RECONSTRUCTION AND PRACTICE**

---

Springer Science & Business Media This book reports the majority of lectures given during the NATO Advanced Study Institute ASI-982440, which was held at the European Scientific Institute of Archamps (ESI, Archamps - France) from November 9 to November 21, 2006. The ASI course was structured in two parts, the first was dedicated to individual imaging techniques while the second is the object of this volume and focused on data modelling and processing and on image archiving and distribution. Courses devoted to nuclear medicine and digital imaging techniques are collected in a complementary volume of NATO Science Series entitled "Physics for Medical Imaging Applications" (ISBN 978-1-4020-5650-5). Every year in autumn ESI organises the European School of Medical Physics, which

covers a large spectrum of topics ranging from Medical Imaging to Rad- therapy, over a period of 7ve weeks. Thanks to the Cooperative Science and Te- nology sub-programme of the NATO Science Division, weeks two and three were replaced this year by the ASI course dedicated to "Molecular Imaging from Physical Principles to Computer Reconstruction and Practice". This allowed the participation of experts and students from 20 different countries, with diverse cultural background and professional experience (Africa, America, Asia, and Europe). A further positive outcome of NATO ASI participation is the publication of this book, which contains the lectures series contributed by speakers during the second week of the ASI.

#### **THEORIES, METHODS AND NUMERICAL TECHNOLOGY OF SHEET METAL COLD AND HOT FORMING**

#### **ANALYSIS, SIMULATION AND ENGINEERING APPLICATIONS**

Springer Science & Business Media Over the last 15 years, the application of innovative steel concepts in the automotive industry has increased steadily. Numerical simulation technology of hot forming of high-strength steel allows engineers to modify the formability of hot forming steel metals and to optimize die design schemes. Theories, Methods and Numerical Technology of Sheet Metal Cold and Hot Forming focuses on hot and cold forming theories, numerical methods, relative simulation and experiment techniques for high-strength steel forming and die design in the automobile industry. Theories, Methods and Numerical Technology of Sheet Metal Cold and Hot Forming introduces the general theories of cold forming, then expands upon advanced hot forming theories and simulation methods, including: the forming process, constitutive equations, hot boundary constraint treatment, and hot forming equipment and experiments. Various calculation methods of cold and hot forming, based on the authors' experience in commercial CAE software for sheet metal forming, are provided, as well as a discussion of key issues, such as hot formability with quenching process, die design and cooling channel design in die, and formability experiments. Theories, Methods and Numerical Technology of Sheet Metal Cold and Hot Forming will enable readers to develop an advanced knowledge of hot forming, as well as to apply hot forming theories, calculation methods and key techniques to direct their die design. It is therefore a useful reference for students and researchers, as well as automotive engineers.

#### **REPORT ON THE AFFAIRS OF PHOENIX VENTURE HOLDINGS LIMITED, MG ROVER GROUP LIMITED AND 33 OTHER COMPANIES**

MG Rover Group Limited (MGRG) went into administration on 8 April 2005. On 31 May 2005 inspectors were appointed by the Secretary of State for Trade and Industry to investigate the affairs of Phoenix Venture Holdings (MGRG's ultimate parent company), MGRG, 32

other companies in the Group and MGR Capital Limited. This report addresses the period between the acquisition of MGRG by Techtronic Limited in 2000 and MGRG's entry into administration in 2005. It pays particular reference to the events leading up to the appointment of administrators of MGRG in April 2005 and the matters raised in a review of financial statements by the Financial Reporting Review Council (the FRRP review is included in the report as an exhibit). The inspectors criticise the unreasonably large financial awards to the four members of the Phoenix Consortium and the chief executive of MGRG. This report has been informed by documentary and computer evidence from numerous sources, including data from the Group's Longbridge site and national sales companies. 95 individuals were interviewed formally and 20 witness statements provided; all of these responses have been considered in this report.

## **BIG PHARMA**

---

### **HOW THE WORLD'S BIGGEST DRUG COMPANIES CONTROL ILLNESS**

---

Robinson Pharmaceutical medicine is very, very big business. The top ten players earned more than \$200 billion in 2003. One drug, Pfizer's cholesterol pill Lipitor, had sales of more than \$9 billion. This kind of money buys an awful lot of friends among doctors and politicians. Most of those involved in the formulation of public health policy seems happy with the present system. The trouble is that the public is starting to have doubts. There is a growing sense that the vast profits of drug companies and their control of the research agenda might not be that good for our health. Jacky Law takes the reader on a journey through the pharmaceutical business and shows how the public is quite right to be concerned about conventional medicine, as it has developed since the late 1970s. She tells a story of spectacular regulatory failure, phenomenally high prices, betrayal of the public interest and a growing awareness among ordinary people that things could be very different. Sophisticated marketing and public relations, not scientific excellence, have helped corporations to preside unchallenged over matters of life and death. It is time, Law argues, for us to take responsibility for our health, not as passive consumers of pharmaceutical medicine, but as informed citizens.
