ECSCW 2009: Proceedings of the 11th European Conference on Computer Supported Cooperative Work, 7-11 September 2009, Vienna, Austria

Springer Science & Business Media **This volume presents the proceedings of ECSCW'09, the 11th European Conference on Computer Supported Cooperative Work. Each conference offers an occasion to critically review our research field, which has been multidisciplinary and committed to high scientific standards, both theoretical and methodological, from its beginning. These proceedings represent discussions and contributions to ongoing challenges. One challenge comes from emerging new technologies connected to 'social computing', gaming, as well as applications supporting citizen participation in their communities. As boundaries between home and work erode with the increased movement of work into home environments, and new applications further blur the once separate conceptions of work and leisure, our intellectual community faces challenges in the ways we think about and study work. Other challenges result from transformations of the world of work itself and the role of IT in these. They have been taken up in in-depth studies of design practice, software development, and manufacturing, as well as in the growing body of research on health care contexts and applications. Finally, there is the question of what is the European perspective in our community and whether it is worthwhile to anchor our research more firmly in such a perspective. Of high relevance to our field is the strong grounding of technology development in an understanding of human activity. The nineteen full papers, four short papers and one discussion paper selected for this conference deal with and reflect on some of these challenges, thus representing the lively debate currently ongoing in our field of research.**

Present-Day Corporate Communication

A Practice-Oriented, State-of-the-Art Guide

Springer **This book serves as an easy-to-read, up-to-date practical guide on professional corporate communication. The key market for this book is the Asia-Pacific region, mainly because there is a gap in know-how in corporate communication among many industry sectors. In addition, at present, one cannot find a lot of educational literature about corporate communication in the market. Therefore, this guidebook closes that gap. In Asia, companies are starting to realize the importance of corporate communication in all areas (external and internal corporate communication, crisis communication (Example: TEPCO) and political communication / government relations / lobbying). This is triggered not only by the recent high profile and success of targeted (political) communication in the USA, but also by the notorious export-orientation of many Asian companies and their increasingly multi-national orientation (fostered by M&A and foreign investments). In addition, the increasing importance of online communication and digital/social media is an important reason why existing guidebooks on corporate communication have to be reassessed and modernized. This book focuses on all major aspects of modern corporate communication, including online / digital communication, and covers new developments, such as "fake news", "post-truths", "political correctness", "the art of bridging" and other new phenomena in the world of (corporate) communication. Simple cartoon-style drawings supplement the text in order to facilitate reading and learning. Corporate communication professional, as well as students and professors in business/management programs, will be given tools to effectively and successfully plan and implement corporate communication strategies and tactics in all major areas.**

Using R for Data Analysis in Social Sciences

A Research Project-Oriented Approach

Oxford University Press **Statistical analysis is common in the social sciences, and among the more popular programs is R. This book provides a foundation for undergraduate and graduate students in the social sciences on how to use R to manage, visualize, and analyze data. The focus is on how to address substantive questions with data analysis and replicate published findings. Using R for Data Analysis in Social Sciences adopts a minimalist approach and covers only the most important functions and skills in R to conduct reproducible research. It emphasizes the practical needs of students using R by showing how to import, inspect, and manage data, understand the logic of statistical inference, visualize data and findings via histograms, boxplots, scatterplots, and diagnostic plots, and analyze data using one-sample t-test, difference-of-means test, covariance, correlation, ordinary least squares (OLS) regression, and model assumption diagnostics. It also demonstrates how to replicate the findings in published journal articles and diagnose**

model assumption violations. Because the book integrates R programming, the logic and steps of statistical inference, and the process of empirical social scientific research in a highly accessible and structured fashion, it is appropriate for any introductory course on R, data analysis, and empirical social-scientific research.
