If an action is wrong, what reason does that give us not to do it? Why should we give such reasons priority over our other concerns and values? In this book, T. M. Scanlon offers new answers to these questions, as they apply to the central part of morality that concerns what we owe to each other. According to his contractualist view, thinking about right and wrong is thinking about what we do in terms that could be justified to others and that they could not reasonably reject. He shows how the special authority of conclusions about right and wrong arises from the value of being related to others in this way, and he shows how familiar moral ideas such as fairness and responsibility can be understood through their role in this process of mutual justification and criticism. Scanlon bases his contractualism on a broader account of reasons, value, and individual well-being that challenges standard views about these crucial notions. He argues that desires do not provide us with reasons, that states of affairs are not the primary bearers of value, and that well-being is not as important for rational decision-making as it is commonly held to be. Scanlon is a pluralist about both moral and non-moral values. He argues that, taking this plurality of values into account, contractualism allows for most of the variability in moral requirements that relativists have claimed, while still accounting for the full force of our judgments of right and wrong. **Papers in Metaphysics and Epistemology: Volume 2** Cambridge University Press This second volume of papers is devoted to Lewis's work in metaphysics and epistemology. **Positive Psychology For Dummies** John Wiley & Sons Why do some people achieve greater success and happiness than others? Defending his ideas from modern misrepresentation, Feser introduces the great Saint's view of metaphysics, ethics, psychology, and philosophy of religion. Why do we find some things beautiful but not others? Is it wrong to share MP3s? These are just some of the questions explored by aesthetics, the philosophy of art. In this sweeping introduction, Charles Taliaferro skilfully guides us through different theories of art and beauty, tackling issues such as who owns art and what happens when art and morality collide. From Plato on poetry to Ringo Starr on the drums, this is a perfect introductory text for anyone interested in the fascinating questions art can raise. **Consequences of Pragmatism Essays, 1972-1980** U of Minnesota Press Rorty seeks to tie philosophy's past to its future by connecting what he sees as the positive (and neglected) contributions of the American pragmatic philosophers to contemporary European developments. What emerges from his explorations is a revived version of pragmatism that offers new hope for the future of philosophy."Rorty's dazzling tour through the history of modern philosophy, and his critical account of its present state (the best general introduction in print), is actually an argument that what we consider perennial problems—mind and body, consciousness and objects, the foundations of knowledge, the fact/value distinction—are merely the dead-ends this picture leads us into." Los Angeles Times Book Review"It can immediately be said that *Consequences of Pragmatism* must be read by both those who believe that they agree and those who believe that they disagree with Richard Rorty. [He] is far and away the most provocative philosophical writer working in North America today, and *Consequences of Pragmatism* should make this claim even stronger."The Review of *Metaphysics*"Philosophy, for Rorty, is a form of writing, a literary genre, closer to literary criticism than anything else, a criticism which takes for one of its major concerns the texts of the past recognized as philosophical: it interprets interpretations. If anyone doubts the continued vigor and continuing relevance of American pragmatism, the doubts can be laid to rest by reading this book." Religious Studies Review **The Art Question** Psychology Press If an artist sends a live peacock to an exhibition, is it art? 'What is art?' is a question many of us want answered but are too afraid to ask. It is the very question that Nigel Warburton demystifies in this brilliant and accessible little book. With the help of varied illustrations and photographs, from Cézanne and Francis Bacon to Andy Warhol and Damien Hirst, best-selling author Warburton brings a philosopher's eye to art in a refreshing jargon-free style. With customary clarity, he explains art theories, that are much discussed but little understood, by thinkers such as Clive Bell, R.G Collingwood and Wittgenstein. He illuminates other perplexing problems in art, such as the artist's intention, representation and emotion. Drawing on photographs of Cindy Sherman and Tiananmen Square, Warburton shows that, if we are ever to answer the art question, we must consider each work of art on its own terms. A stimulating and handy guide through the art maze, *The Art Question* is essential reading for anyone interested in art, philosophy or those who simply like looking at and thinking about pictures. **Satanism: A Beginner's Guide to the Religious Worship of Satan and Demons Volume I: Philosophy** Devil's Mark Publishing In this, the first book in a new series on Traditional Satanism, Brother Nero, an outspoken advocate of the Devil and His ways for over 20 years, focuses on an area of Satanism that few other authors have discussed in detail: the day to day philosophy and lifestyles of those who sincerely worship the Devil. The award-winning, renowned Guardian columnist Oliver Burkeman offers a lively, entertaining philosophical guide to time and time management, setting aside superficial efficiency solutions in favor of reckoning with and finding joy in the finitude of human life The average human lifespan is absurdly, insultingly brief. Assuming you live to be eighty, you have just over four thousand weeks. Nobody needs telling there isn't enough time. We're obsessed with our lengthening to-do lists, our overfilled inboxes, work-life balance, and the ceaseless struggle against distraction; and we're deluged with advice on becoming more productive and efficient, and "life hacks" to optimize our days. But such techniques often end up making things worse. The sense of anxious hurry grows more intense, and still the most meaningful parts of life seem to lie just beyond the horizon. Still, we rarely make the connection between our daily struggles with time and the ultimate time management problem: the challenge of how best to use our four thousand weeks. Drawing on the insights of both ancient and contemporary philosophers, psychologists, and spiritual teachers, Oliver Burkeman delivers an entertaining, humorous, practical, and ultimately profound guide to time and time management. Rejecting the futile modern obsession with "getting everything done," *Four Thousand Weeks* introduces readers to tools for constructing a meaningful life, showing how many of the unhelpful ways we've come to think

about time aren't inescapable, unchanging truths, but choices we've made as individuals and as a society—and that we could do things differently. **Situating the Self Gender, Community, and Postmodernism in Contemporary Ethics** Psychology Press "'Situating the Self' is a decisive intervention into debates concerning modernity, postmodernity, ethics, and the self. In fact, Benjamin Graham was Buffett's professor at Columbia and the most influential financial advisor he ever had. So, have you ever tried reading Graham's books? Many might agree the books are as exciting as listening to Ben Stein read the 30th page of *The Wall Street Journal*. It is time we fixed that. From nuclear war and climate change to AI and synthetic biology, the risk of human extinction during this century is frighteningly high. Reducing these risks should be the top global priority-but it isn't. Bringing together key scientific evidence and insight from the humanities, Toby Ord, University of Oxford professor and advisor to the World Bank, U.S. National Security Council, and other global organizations, provides novel tools and concrete strategies for making the largest possible difference in saving our species. The moral argument is simple: society has begun to value diversity across a wide array of genders, races, religions, and sexual orientations, and the Western world is beginning to see the injustice of devaluing those who live in distant countries as well. The next step is to recognize the equality of people distant from us in time-the millions of future generations that should follow our own. The value of many trillions of lives, billions of years of civilization, and untold heights of flourishing and achievement dramatically increases the stakes of existential risks. To destroy such a future would break the partnership across the generations that has raised the human project up to its current heights; it would betray the collective virtues of our civilization; and it might even eliminate the only part of the universe that will ever be capable of appreciating its wonders. Despite the daunting stakes we face, *The Precipice* resists doom and gloom: Ord's style and message are optimistic, and the book is animated by an inspiring vision of our vast potential. **Aristotle for Everybody** Touchstone Offers an imaginative perspective on Aristotelian logic, presenting an exploration of nature, society, and man in light of commonplace events and reexamining concepts of body, mind, change, cause, part, whole, one, and many **You're Saying it Wrong A Pronunciation Guide to the 150 Most Commonly Mispronounced Words and Their Tangled Histories of Misuse** For word nerds and grammar geeks, a witty guide to the most commonly mispronounced words, along with their correct pronunciations and pithy forays into their fascinating etymologies and histories of use and misuse. He contends that Christian beliefs are warranted to the extent that they are formed by properly functioning cognitive faculties, thus, insofar as they are warranted, Christian beliefs are knowledge if they are true. **Phenomenology The Basics** A concise and engaging introduction to one of the dominant philosophical movements of the 20th century. Taking not only a psychological approach, but a sociological approach as well, Ellul's book outlines the taxonomy for propaganda, and ultimately, it's destructive nature towards democracy. Drawing from his own experiences fighting for the French resistance against the Vichy regime, Ellul offers a unique insight into the propaganda machine. "A far more frightening work than any of the nightmare novels of George Orwell. With the logic which is the great instrument of French thought, Ellul explores and attempts to prove the thesis that propaganda, whether its ends are demonstrably good or bad, is not only destructive to democracy, it is perhaps the most serious threat to humanity operating in the modern world."--Los Angeles "The theme of Propaganda is quite simply . . . that when our new technology encompasses any culture or society, the result is propaganda . . . Ellul has made many splendid contributions in this book."--Book Week **The Art of Fermentation An In-depth Exploration of Essential Concepts and Processes from Around the World** Chelsea Green Publishing Winner of the 2013 James Beard Foundation Book Award for Reference and Scholarship, and a New York Times bestseller, *The Art of Fermentation* is the most comprehensive guide to do-it-yourself home fermentation ever published. Sandor Katz presents the concepts and processes behind fermentation in ways that are simple enough to guide a reader through their first experience making sauerkraut or yogurt, and in-depth enough to provide greater understanding and insight for experienced practitioners. While Katz expertly contextualizes fermentation in terms of biological and cultural evolution, health and nutrition, and even economics, this is primarily a compendium of practical information--how the processes work; parameters for safety; techniques for effective preservation; troubleshooting; and more. With two-color illustrations and extended resources, this book provides essential wisdom for cooks, homesteaders, farmers, gleaners, foragers, and food lovers of any kind who want to develop a deeper understanding and appreciation for arguably the oldest form of food preservation, and part of the roots of culture itself. Readers will find detailed information on fermenting vegetables; sugars into alcohol (meads, wines, and ciders); sour tonic beverages; milk; grains and starchy tubers; beers (and other grain-based alcoholic beverages); beans; seeds; nuts; fish; meat; and eggs, as well as growing mold cultures, using fermentation in agriculture, art, and energy production, and considerations for commercial enterprises. Sandor Katz has introduced what will undoubtedly remain a classic in food literature, and is the first--and only--of its kind. **A Vision of Britain A Personal View of Architecture** Doubleday Books Met reg. Derived from courses given to postgraduate and final year undergraduate MEng students, this book presents some of the models that form a part of the typical undergraduate geotechnical curriculum and describes some of the aspects of soil behaviour which contribute to the challenge of geotechnical modelling.
