Coordinated Management of Meaning (CMM)

A Research Manual

Coordinated Management of Meaning (CMM): A Research Manual consists of the work of Barnett Pearce, Vernon Cronen, and their colleagues over the past 40 years. The theory offers a rich set of ideas for understanding communication processes. Still dedicated to ways in which people coordinate interaction and construct meaning, the theory offers fresh ways of examining human social life. This manual provides a brief, clear, and useful set of tools for CMM research. Although this booklet does provide a short introduction to the theory, it assumes some background in CMM theory and is designed for CMMers who want a clearer picture of how to conduct research in this tradition. Of particular importance in this endeavor is maintaining a communication perspective to ensure that researchers focus on the communication processes, rather than look through it to something else. To achieve this goal, researchers can describe the process, interpret communication events, provide critique, and assert action plans. The framing of research questions is especially important in maintaining a communication perspective. Research tools are organized into the categories of description, interpretation, critique and action. In addition, the CMM consulting method known as SEAVA is translated into research processes that involve storyboarding, enriching stories, analyzing interaction, visioning, and acting.

Manual of Clinical Oncology

Springer While our knowledge about cancer is proliferating rapidly, our principles of cancer medicine for individual patients and for populations are evolving only gradually. Our fundamental understanding of cancer causes and development is incomplete, and our treatments are nonspecific and less often curative than we would like. Nevertheless, worldwide, our major challenge remains to apply to our populations all that we know about cancer. To meet this challenge, doctors everywhere need a broad view and understanding of cancer causes and control. This book is intended for doctors-in-training and clinical medical practitioners; it provides principles across the breadth of cancer medicine. The editors and authors believe that it is possible to reduce the exposition of current knowledge to the compact 40 chapters and 600 pages presented here without losing the comprehensiveness, richness, and pragmatic detail that doctors need. This compilation presumes knowledge of the basic sciences, particularly genetics, pathology, anatomy, and physiology. We have tried to balance scientific exposition with practical material in prevention, early detection, and palliative care, which are the major areas of public health medicine where greater attention is needed worldwide. While this book is based, in part, on material prepared for previous editions, each chapter has been newly written and edited by the authors and editorial staff for this edition.

Old-House Journal

Old-House Journal is the original magazine devoted to restoring and preserving old houses. For more than 35 years, our mission has been to help old-house owners repair, restore, update, and decorate buildings of every age and architectural style. Each issue explores hands-on restoration techniques, practical architectural guidelines, historical overviews, and homeowner stories--all in a trusted, authoritative voice.

Lectures on Formal and Rigid Geometry

Springer The aim of this work is to offer a concise and self-contained 'lecture-style' introduction to the theory of classical rigid geometry established by John Tate, together with the formal algebraic geometry approach launched by Michel Raynaud. These Lectures are now viewed commonly as an ideal means of learning advanced rigid geometry, regardless of the reader's level of background. Despite its parsimonious style, the presentation illustrates a number of key facts even more extensively than any other previous work. This Lecture Notes Volume is a revised and slightly expanded version of a preprint that appeared in 2005 at the University of Münster's Collaborative Research Center "Geometrical Structures in Mathematics".

Style, Gender, and Fantasy in Nineteenth-Century American Women's Writing

Cambridge University Press In this 2010 book, Dorri Beam presents an important contribution to nineteenth-century fiction by examining how and why a florid and sensuous style came to be adopted by so many authors. Discussing a diverse range of authors, including Margaret Fuller and Pauline Hopkins, Beam traces this style through a variety of literary endeavors and reconstructs the political rationale behind the writers' commitments to this form of prose. Beam provides both close readings of a number of familiar and unfamiliar works and an overarching account of the importance of this form of writing, suggesting new ways of looking at style as a medium through which gender can be signified and reshaped. *Style, Gender, and Fantasy in Nineteenth Century American Women's Writing* redefines our understanding of women's relation to aesthetics and their contribution to both American literary romanticism and feminist reform. This illuminating account provides valuable new insights for scholars of American literature and women's writing.

The Oxford Handbook of Skills and Training

Oxford University Press Skills and workforce development are at the heart of much research on work, employment, and management. But are they so important? To what extent can they make a difference for individuals, organizations, and nations? How are the supply and, more importantly, the utilization of skill, currently evolving? What are the key factors shaping skills trajectories of the future? This Handbook provides an authoritative consideration of issues such as these. It does so by drawing on experts in a wide range of disciplines including sociology, economics, labour/industrial relations, human resource management, education, and geography. The Handbook is relevant for all with an interest in the changing nature - and future - of work, employment, and management. It draws on the latest scholarly insights to shed new light on all the major issues concerning skills and training today. While written primarily by leading scholars in the field, it is equally relevant to policy makers and practitioners responsible for shaping the development of human capability today and into the future.

Time, Work and Organization

Taylor & Francis In this book, first published in 1989, the authors have sought to highlight some of the major themes in the study of time and work within separate but related fields of study. A number of common starting points and issues are examined, alongside the various conclusions which different researchers have drawn together. Working together, the four authors have enriched their individual understanding of worktime through exposure to approaches taken by others working within different discipline boundaries. This title will be of interest to students of business studies.

The Concrete Blonde

Hachette UK From the bestselling author of *The Lincoln Lawyer* and *The Gods of Guilt*. When LAPD detective Harry Bosch shot and killed Norman Church - the 'Dollmaker' - the police were convinced it marked the end of the search for one of the city's most bizarre serial killers. But four years later, Norman Church's widow is taking Bosch to court, accusing him of killing the wrong man. To make matters worse, Bosch has just received a note, eerily reminiscent of the ones the Dollmaker used to taunt him with, giving him a location where a body can be found. Is the Dollmaker still alive? Or is this the work of a vicious copycat killer, determined to repeat the Dollmaker's grisly feats and destroy Bosch's career in the process?
