Diagnosis and Management of Soft Tissue Sarcoma

CRC Press Soft tissue sarcoma is an uncommon disease with a historically ominous prognosis, but there has been a great deal of progress in the last two decades in the understanding of these diseases, and accurate prognostic and therapeutic information is now available that removes much of the mystique.

Cancer Chemotherapy Reports

Pediatric Bone Sarcomas

Epiphysiolyis before excision

Springer Science & Business Media This book addresses malignant bone tumours by focusing upon physeal distraction (epiphysiolyis) before excision. This technique has long been used by the authors of this book in preserving the joint in metaphyseal bone tumours in children.

Operative Techniques in Orthopaedic Surgical Oncology

Lippincott Williams & Wilkins Operative Techniques in Orthopaedic Surgical Oncology provides full-color, step-by-step explanations of all operative procedures in orthopaedic oncology. This text contains the chapters from the oncology section in Sam W. Wiesel's Operative Techniques in Orthopaedic Surgery. Written by experts from leading institutions around the world, this superbly illustrated volume focuses on mastery of operative techniques and also provides a thorough understanding of how to select the best procedure, how to avoid complications, and what outcomes to expect. Accompanying the book is a companion website with the fully searchable text and procedural videos. The user-friendly format is ideal for quick preoperative review of the steps of a procedure. Each procedure is broken down step by step, with

full-color intraoperative photographs and drawings that demonstrate how to perform each technique. Extensive use of bulleted points and tables allows quick and easy reference. Each clinical problem is discussed in the same format: definition, anatomy, physical exams, pathogenesis, natural history, physical findings, imaging and diagnostic studies, differential diagnosis, non-operative management, surgical management, pearls and pitfalls, postoperative care, outcomes, and complications.

Sarcoma Oncology

A Multidisciplinary Approach

PMPH USA, Ltd Sarcoma Oncology: A Multidisciplinary Approach is a comprehensive textbook that addresses the entire spectrum of the subject from epidemiology to laboratory research in the biology of sarcomas. Chapters contributed by an international group of highly regarded specialists cover the epidemiology and pathology of sarcomas; diagnostic imaging and biopsy techniques; staging and prognosis; surgery of sarcomas in extremity soft tissue, abdominal wall and trunk, and skeletal bone; hyperthermia in sarcoma treatment; isolated limb perfusion; surgery for metastases; reconstructive surgery; radiation therapy; systemic chemotherapy; multidisciplinary care; treatment-induced sarcoma; pain management in sarcoma; and basic research including molecular biology and mouse models.

Lower-limb Prosthetics and Orthotics

Clinical Concepts

SLACK Incorporated Offers a comprehensive overview of lower limb prosthetics and orthotics, covering normal and pathological gait, lower limb biomechanics, clinical applications, as well as prosthetics and orthotic design and components. This text is suitable for clinicians in the fields of physical medicine and rehabilitation, and, orthopedic and vascular surgery.

Reports

Soft Tissue Sarcomas

PMPH-USA Part of the acclaimed ACS Atlas of Clinical Oncology series, this book offers an expert overview of soft tissue sarcomas. It discusses diagnosis and staging, surgical approaches, radiation therapy, chemotherapy, pediatric sarcomas, and much more. Topics covered include epidemiology, inherited syndromes, biopsy and surgical techniques, external beam irradiation, brachytherapy, intraoperative radiation therapy, neoadjuvant therapy, adjuvant therapy, regional perfusion, pain syndromes, and rehabilitation.

Treatment of Bone and Soft Tissue Sarcomas

Springer Science & Business Media Bone and soft tissue sarcomas represent only about 2% of all malignancies; however, their treatment - with the goal of curing the patient while preserving the functionality of the affected body part - can, unlike other malignancies, only be successful with therapy concepts devised by interdisciplinary teams. This volume provides an extensive up-to-date overview of the specific diagnostics and current treatment standards of these rare entities, presenting the various limb-sparing modalities for patients with bone and soft tissue sarcomas with special regard to innovative reconstructive options. The evaluation of quality of life based on validated scores and the individual methods of coping with the illness through creative artistic projects are also acknowledged and integrated in the whole concept.

Cañadell's Pediatric Bone Sarcomas

Epiphysiolytic before Excision

Springer The second edition of this well-received book reflects the state of the art in surgery for malignant bone tumors in children, with a particular focus on epiphysiolytic before excision. With a thorough update, new chapters, a clear presentation of tips and tricks to address complications, as well as supplementary online videos and tutorials, this book addresses the challenges of limb preservation that are posed to the surgeon in this new era of cancer treatment characterized by higher survival rates and longer survival times. The authors are experienced practitioners of Cañadell's technique, but the book also explores, thanks to the focused contributions of experts from other fields of medicine, a range of topics from the molecular biology and histological aspects of bone tumors, to the use of imaging techniques and surgical options for epiphyseal preservation. Abundant illustrations

and accounts of clinical results make this book an indispensable guide for orthopedic surgeons and pediatric oncologists and give the book an interdisciplinary appeal to practitioners in more general orthopedics, oncology, pediatrics and surgery.

Targeted Muscle Reinnervation

A Neural Interface for Artificial Limbs

Taylor & Francis Implement TMR with Your Patients and Improve Their Quality of Life Developed by Dr. Todd A. Kuiken and Dr. Gregory A. Dumanian, targeted muscle reinnervation (TMR) is a new approach to accessing motor control signals from peripheral nerves after amputation and providing sensory feedback to prosthesis users. This practical approach has many advantages over other neural-machine interfaces for the improved control of artificial limbs. Targeted Muscle Reinnervation: A Neural Interface for Artificial Limbs provides a template for the clinical implementation of TMR and a resource for further research in this new area of science. After describing the basic scientific concepts and key principles underlying TMR, the book presents surgical approaches to transhumeral and shoulder disarticulation amputations. It explores the possible role of TMR in the prevention and treatment of end-neuromas and details the principles of rehabilitation, prosthetic fitting, and occupational therapy for TMR patients. The book also describes transfer sensation and discusses the surgical and functional outcomes of the first several TMR patients. It concludes with emerging research on using TMR to further improve the function and quality of life for people with limb loss. With contributions from renowned leaders in the field, including Drs. Kuiken and Dumanian, this book is a useful guide to implementing TMR in patients with high-level upper limb amputations. It also supplies the foundation to enable improvements in TMR techniques and advances in prosthetic technology.

The Medical News

Manual of Soft-Tissue Tumor Surgery

Springer Science & Business Media The management of soft-tissue neoplasms has always had an aura of mystique due to the relative rarity of these lesions in comparison to the more common cancers occurring in man. There are many variations in technique of the operations employed for these tumors as well. In this volume we have illustrated our own personal preferences in approach to soft tissue sarcomas with the hope it will serve as a useful guide to the surgeon who is faced with one or more of these problems. None of the operations depicted in this manual are original with us but they are procedures and approaches we have found effective for the clinical management of this family of tumors. In presenting this volume we wish to acknowledge our gratitude to our surgical teachers, our present and past associates in surgical oncology, our colleagues in the other oncologic disciplines, and our patients whose treatment is illustrated herein. We are indebted to Dr. Saul Kay, Professor of Pathology, and Dr. James Walsh, Associate Professor of Radiology, for providing the illustrations of histopathology and radiologic imaging in the early chapters. We particularly appreciate the superb artwork of our enthusiastic teammates, Trudy Nicholson and Jane Hurd, as their contribution is the crux of our endeavor. Walter Lawrence Jr., M.D. James P. Neifeld, M.D. Jose J. Terz, M.D. .

Prosthetics and Patient Management

A Comprehensive Clinical Approach

SLACK Incorporated Covering both upper and lower extremity prosthetics, this book provides the information clinicians need to manage a range of prosthetic patients, and their disorders. The authors cover practical solutions to everyday problems that clinicians encounter, from early prosthetic management to issues facing the more advanced prosthetic user. The text is broken down into four sections encompassing the range of subjects that confront practitioners, including Early Management; Rehabilitation of Patients with Lower Limb Amputation; Rehabilitation of Patients with Upper Limb Amputations; and Beyond the Basics, which includes special considerations for children and futuristic concepts.

Immediate Postsurgical Prosthetics in the Management of Lower Extremity Amputees

Tumors and Tumorlike Lesions of Bone and Joints

Springer Science & Business Media In the past 50 years considerable progress has been made in orthopedics and traumatology. One of the principal reasons for these advances has undoubtedly been the separation of these specialties from general surgery. Alongside this development the number of those devoted to the study and treatment of locomotor disabilities, who could formerly be counted on the fingers of one hand-at least in our country-has multiplied by thousands and even more have subspecialized. This accelerated growth has encouraged the sharpening of diagnostic skills, technical improvement, and the application of advances in other fields of medicine to orthopedics. However, paradoxically enough, one of the most important aspects of orthopedics, bone pathology, has not attracted enough specialists worldwide to handle the complex problems, encountered daily, that only an expert and experienced pathologist is capable of resolving. Within the modern milieu, the personality and accomplishments of Professor Fritz Schajowicz stand out distinctly. Dr. Schajowicz, of Austrian origin, studied with Professor J. Erdheim of Vienna. Having afterwards been granted a fellowship to extend his knowledge of bone pathology at the Rizzoli Orthopedic Institute of Bologna under the direction of Professor Vittorio Putti, he complemented this work with the study of clinical orthopedics at that prestigious institution. In 1938, Professor Jose Valls visited the Rizzoli Institute and, recognizing the outstanding training of Professor Schajowicz, invited him to move to Argentina where we were in need of an expert pathologist.

Cancer in Adolescents and Young
Adults

Springer Science & Business Media This is the first comprehensive book devoted exclusively to cancer in adolescents and young adults. It compiles medical, epidemiological, biological, psychological, and emotional issues of young adults' oncology. The emphasis is on the differences of the "same" cancer in younger and older patients. Model programs specially designed to care for patients in the age group and surveillance of long-term adverse effects are reviewed.

Musculoskeletal Infection

Springer Nature This book gathers international knowledge and contemporary clinical and scientific evidence on infections associated with the musculoskeletal system at a time when we are confronted with significant challenges and uncertainty. A key focus of the book is enhancing and advancing future discovery in the detection, prevention and treatment of musculoskeletal infection. This is an ideal book for physicians, surgeons, research scientists, university students, as well as medical and allied health students.

Lower Extremity Amputation

W B Saunders Company

Image-Guided IMRT

Springer Science & Business Media Intensity-modulated radiation therapy (IMRT), one of the most important developments in radiation oncology in the past 25 years, involves technology to deliver radiation to tumors in the right location, quantity and time. Unavoidable irradiation of surrounding normal tissues is distributed so as to preserve their function. The achievements and future directions in the field are grouped in the three sections of the book, each suitable for supporting a teaching course. Part 1 contains topical reviews of the basic principles of IMRT, part 2 describes advanced techniques such as image-guided and biologically based approaches, and part 3 focuses on investigation of IMRT to improve outcome at various cancer sites.
