Parent-adolescent Relationships

University Press of Amer The ten chapters that make up this volume not only cover a broad range of key substantive issues in adolescent research (e.g., ego, development, identity formation, self-esteem, pubertal development, cognitive development, deviant behavior, religiosity, and academic achievement), but as a whole they illustrate some of the key theoretical and methodological trends occurring in parent-adolescent research. Several of the chapters consider the interface between components of the family environment (e.g., the marital and parental systems) or between the family and other social contexts (e.g., peers, school, religion). Methodologically, this set of chapters give an interesting sampling of the variability in design and data analysis used in parent-adolescent studies. Designs include both cross-sectional and longitudinal survey, observation, and case study. This volume should be useful to scholars, graduate students, and professionals interested in adolescent development and behavior in the context of the family and other social environments.

Mindful Parenting

A Guide for Mental Health Practitioners

Springer Science & Business Media Despite its inherent joys, the challenges of parenting can produce considerable stress. These challenges multiply—and the quality of parenting suffers—when a parent or child has mental health issues, or when parents are in conflict. Even under optimal circumstances, the constant changes as children develop can tax parents' inner resources, often undoing the best intentions and parenting courses. Mindful Parenting: A Guide for Mental Health Practitioners offers an evidence-based, eight week structured mindfulness training program for parents with lasting benefits for parents and their children. Designed for use in mental health contexts, its methods are effective whether parents or children have behavioral or emotional issues. The program's eight sessions focus on mindfulness-oriented skills for parents, such as responding to (as opposed to reacting to) parenting stress, handling conflict with children or partners, fostering empathy, and setting limits. The book dovetails with other clinical mindfulness approaches, and is written clearly and accessibly so that professionals can learn the material easily and impart it to clients. Featured in the text: Detailed theoretical, clinical, and empirical foundations of the program. The complete Mindful Parenting manual with guidelines for eight sessions and a follow-up. Handouts and assignments for each session. Findings from clinical trials of the Mindful Parenting program. Perspectives from parents who have finished the course. Its clinical focus and empirical support make Mindful Parenting an invaluable tool for practitioners and clinicians in child, school, and family psychology, psychotherapy/counseling, psychiatry, social work, and developmental psychology.

Psychology of Academic Cheating

Elsevier Who cheats and why? How do they cheat? What are the consequences? What are the ways of stopping it before it starts? These questions and more are answered in this research based investigation into the nature and circumstances of Academic Cheating. Cheating has always been a problem in academic settings, and with advances in technology (camera cell phones, the internet) and more pressure than ever for students to test well and get into top rated schools, cheating has become epidemic. At the same time, it has been argued, the moral fiber of society as a whole has dampened to find cheating less villainous than it was once regarded. Who cheats? Why do they cheat? and Under what circumstances? Psychology of Academic Cheating looks at personality variables of those likely to cheat, but also the circumstances that make one more likely than not to try cheating. Research on the motivational aspects of cheating, and what research has shown to prevent cheating is discussed across different student populations, ages and settings. Summarizes 50 years of academic cheating trends in K-12 and postsecondary institutions Examines the methodology of academic cheating including the effect of new technologies Reviews and discusses existing theories and research about the motivation behind academic cheating

Asian American Parenting and Parent-Adolescent Relationships

Springer Science & Business Media The relationships between children and their parents are the building blocks for family relationships throughout life. The nature of the parent-child relationship begins with parenting—the practices and strategies that parents engage in as they raise their children. Parenting during childhood sets the stage for parent-adolescent relationships. These relationships make a critical difference during the teenage years: we know that when parent-adolescent relationships are healthy and strong, adolescents are more likely to have high aspirations and achievement, and to make healthier choices when it comes to risk-taking. Most of the research in this field has been based in the United States and has been conducted through studies of European American families. Yet a growing body of research suggests important ethnic differences in styles of parenting and the qualities characterizing the parent-adolescent relationship. In this area of research, most existing studies have examined ethnic and cultural

group differences using widely accepted measures and concepts of parenting. Comparative studies assume that dimensions of parenting such as parental warmth or control have the same meaning across cultures; however, given that conceptualizations of adolescent-parent relationships have been developed and tested on samples comprised largely of European Americans, we cannot rule out the possibility that the way we understand parenting has been shaped by the predominantly Western- and U. S. -focused research in this field.

Development and the Next Generation

World Bank Publications "The theme of The World Development Report 2007 is youth - young people between the ages of 12 to 24. As this population group seeks identity and independence, they make decisions that affect not only their own well-being, but that of others, and they do this in a rapidly changing demographic and socio-economic environment. Supporting young people's transition to adulthood poses important opportunities and risky challenges for development policy. Are education systems preparing young people to cope with the demands of changing economies? What kind of support do they get as they enter the labor market? Can they move freely to where the jobs are? What can be done to help them avoid serious consequences of risky behavior, such as death from HIV-AIDS and drug abuse? Can their creative energy be directed productively to support development thinking? The report will focus on crucial capabilities and transitions in a young person's life: learning for life and work, staying healthy, working, forming families, and exercising citizenship. For each, there are opportunities and risks; for all, policies and institutions matter."

America's Youth in Crisis

SAGE Many adolescents in the United States are at risk from substance abuse, unsafe sexual practices, academic underachievement, crime and violence. What can be done to tackle these growing problems? The author of this thought-provoking book suggests the need to focus on young people's development in relation to specific features of the individual's environmental 'context' such as family, neighbourhood and culture. By effecting changes in these contexts, in the form of community programmes, researchers can test for differences in children's behaviour and development.

Principles and concepts are applied to various clinical concerns faced by clients in each of the five developmental life stages: childhood, adolescence, young adulthood, midlife, and late life. Book chapters discuss a variety of specific issues- such as child trauma and abuse, ADHD, body image and eating disorders, at-risk adolescents, African American youth, sexuality in young adulthood, alcohol and other drugs issues, lesbians and gay men at midlife, career development, intergenerational conflict in Asian Americans, and loss in late life - and offer detailed strategies for the development and enhancement of self-esteem. Adolescents in School and Society

Applied Cyberpsychology

Practical Applications of Cyberpsychological Theory and Research

Springer Cyberpsychology is an emerging area of psychological study that aims to understand and explain all facets of online behaviour. This book brings together overviews from a number of leading authorities in the field, to suggest how academic theory and research can be applied to a variety of online behaviours. Both positive and negative behaviours are considered, including topics as diverse as parenting the online child, age-related internet usage and cultural considerations in online interactions. Psychological research can no longer view online and offline worlds as different entities, but must consider online behaviours as equally distinct as offline activities. This is especially apparent when looking at online dating, the role that social networks play in organisations and online consumer behaviours, and in a consideration of the role that psychological research plays in underpinning the multi-billion pound gaming industry. Focusing on these personal applications of the Internet, insight is also offered into the role that theory and research plays in training military personnel as well as the use of psychometric testing to select and retain employees.
