The Nervous System of the Human Body

As Explained in a Series of Papers Read Before the Royal Society of London with an Appendix of Cases and Consultations on Nervous Diseases

"The more important endowments of life are bestowed upon the Nervous System, which embraces the Brain, the organs of the Senses, and the instruments of Volition. Through it are also communicated the sensibilities which control the instinctive or automatic movements. Thus it governs the actions of volition, as well as those movements which are appropriated to the vital organization. The Nervous System is therefore that part of Anatomy in which are to be discovered not only the different properties of the living fibre, but also the relations of the organs to each other, and the dependence of the muscular system upon those organs. The present volume contains many proofs that, by the advancement of anatomical science, we are enabled to make important practical distinctions; and these give value to that which can never be without interest to a student of nature. All the proofs of design, of relation, of prospective contrivance, which are deduced from the mechanical parts of the animal frame, are as nothing to the instances which the contemplation of the Nervous System affords. The relations to external nature, the sources of enjoyment, the provisions against injuries, the order and symmetry adapted to bestow motion and action, visible in the Nervous System, supply accumulated proofs of benevolence, as well as of divine intelligence, in the construction of our bodies"--Preface. The majority of the inhabitants of cities and towns are frequently unconscious of the magnitude, intricacy, and extent of the underground works, which have been designed and constructed at great cost, and are necessary for the maintenance of their health and comfort. It is, however, impossible for largeN numbers of the human species to congregate and live upon a limited space, without provision being made for the rapid removal of the refuse thereby produced. This necessity is perhaps most forcibly illustrated, by the fearful destruction of life from malaria, produced amongst troops suddenly encamped upon ground not previously so prepared for human habitation. The ravages of disease, thus engendered, became a subject of serious alarm amongst the allied troops in the Crimea; and there are many instances of the mortality in armies arising from this cause, having far exceeded the deaths from actual warfare. Various methods have been, and still are, adopted in different parts of the globe, for obviating the dangers which thus force themselves upon the attention of mankind. The Jews, it is known, kept a furnace called " Gehenna," or " Hell-fire," constantly burning in the Valley of Hinnom, into which the refuse of the city of Jerusalem was daily cast, as well as the dead bodies of criminals; and even the most savage nations are unable entirely to neglect these considerations. The Chinese, sacrificing to a large extent the delicacy and comfort so highly prized by more civilized nations, but with a sound appreciation of the value of town refuse, apply it in the most direct and rude manner to the...

The Commentaries Upon the Aphorisms of Dr. Herman Boërhaave, the Late Learned Professor of Physick in the University of Leyden, Vol. 2

Concerning the Knowledge and Cure of Several Diseases Incident to Human Bodies (Classic Reprint)

Forgotten Books Excerpt from The Commentaries Upon the Aphorisms of Dr. Herman Boërhaave, the Late Learned Professor of Physick in the University of Leyden, Vol. 2: Concerning the Knowledge and Cure of Several Diseases Incident to Human Bodies One for curing by diet, the Other by medicine, and the third by the use of the hands. But yet surgery was not neglected by Physicians. For the very parent of physic, Hippocrates, has wrote beautifully on wounds of the head, on ulcers, fistula, fractures, luxations, 69°c. Nor has he (lightly considered those accidents and injuries, but he has also described at large the methods and machines to be used for the cure of fractures and luxations. This we may add, that it is of the highest use to the cure of internal diseases, to examine and compare the maladies which are feared externally. These last are all of them more obvious to the senses, and more easily understood. Thus we can much more evidently understand external inflammations, and their various ways of terminating, than those feared internally. What light do we not receive into the nature of obscure diseases in the head, from a previous knowledge of the wounds in that part. Since therefore the general and best method of to pass from the easier to the more difficult propositions, therefore those external disorders which belong to surgery, are here deferred before the history of internal and more obscure diseases. The Land & the Orchard of Human Species

The Book of Life - in - Peace

Xlibris Corporation The analytical views in this book are not in any way serendipity; rather, they were well thought-out and structured as simply received. Thus arises the need to initiatively look back at the epoch of our existence on Earth as preceded by the following: survival of the fittest, search for food, where to live, sacrifices and rituals to appeal to God, brutalism against one another, religious sect formation, and deforestation due to uncontrollable population increase. Improvisation of wooden houses, trees of concrete, iron, and steel have been initiated, but, in a way, they have continually caused global warming to increase very much, at a gradual pace, as civilization advances through Machine Age/mechanized farming, industrialization, and technological advancements, space exploration, and globalization of industries and corporate organizations. The heat increases at an unusual, unprecedented level due to greenhouse gas emission and thus the assumed greenhouse releases a light-weight carbon dioxide (CO2) gas into the atmosphere, which is speculated to have formed impenetrable blanket. The presence of CO2 is an indicator, pointing to a fact that this gas in question had been released in the past and is presently being discharged uncontrollably. More so, there seems to be no end in sight as the CO2 continues to be sporadically expunged into the atmosphere. The process described above has continued to be expanding through all frontiers with no end in sight, where new neighborhoods are being built, Suburbs margining together as new Castles are evolving block by block, and concrete plazas are enveloping the Earth; so are the vegetative forest of trees are disappearing, causing global warming to increase exponentially. The increase becomes very much intense at an alarming rate in that it has now been considered to be adversely effective when found to be dangerously impacting the essence and every facet of life. Analytical research is hereby required to be conducted by the world's best researchers and scientists in their respective professional fields. Necessary wisdom of advice has to be forwarded by religious leaders of all known, notable, reliable religious groups or denominations. Leaders and heads of governments of all Nations that control every facet of life, in every part of the globe, must guide and monitor, purposely to do proper checks and balances with intuition, ideology, predictions, and prophecies contained in this book. The Land & the Orchard of Human Species This is to determine the level of damages caused by humanity, thereby putting the Earth's conditions into a scale of ratio prior to civilization, and, as civilization progresses, i.e., the condition of the Earth from time immemorial as the scientists and archaeologists can determine through lists of records and documentaries. Precisely, from premedieval periods to present days and age, while projecting into the future of the planet Earth in order for us to be just and find peace among ourselves and on Earth. If humanity cannot find peace on Earth, then, we cannot find peace elsewhere because human's trait is like a shadow that trails behind you when

you take a walk in the light. Source of all lives and the means of energy and growth.

Therapy of Infectious Diseases

W B Saunders Company Here's thorough, up-to-date guidance on the prevention, diagnosis, and management of infectious diseases seen around the world. Readers will find evidenced-based management recommendations as well as personal suggestions from expert contributors in areas where there is not enough data to otherwise direct treatment decisions. Emphasis is placed on syndromes and patient management instead of pathogens, making this resource very useful for clinicians. Each chapter includes an extensive list of up-to-date references. Offers evidence-based management recommendations as well as personal suggestions from expert contributors in areas where there is not enough data to otherwise direct treatment decisions. Focuses on syndromes instead of pathogens, reflecting the empiric nature of infectious disease therapy and making it very useful for clinicians. Covers infectious diseases seen around the world. Provides an extensive list of up-to-date references in each chapter.

The Ecology of Mycobacteria: Impact on Animal's and Human's Health

Springer Science & Business Media habitats and the overlapping of these biotopes by humans and animals contributed to the spread of mycobacteria and perhaps to their convergence to pathogenicity. It was not our intention to present a compendium covering all published results, but rather to issue a "readable" book, which is illustrative and thus focused on the principle facts. The increase in the number of Editors has allowed the sharing of original experiences regarding the ecology of mycobacteria, published here for the first time in some cases. The supplemented edition should serve as a guide to these discoveries and also contribute to an understanding of clinically significant species in human and animal medicine. Borstel, Germany, January 2009 Jindrich Kazda
Editors' Comments The editors responsible for the chapters are listed under the title of each chapter. Authors are listed under the titles of subchapters. The references are listed as they appear in the databases Reference Manager (Thomson Reuters, Philadelphia) as imported from Web of Science (Thomson Reuters, Philadelphia) or PubMed (Medline, NLM Bethesda). A few citations, not indexed, were cited according to the reprints or books available. This principle resulted in minor differences in the titles (not all reference titles are in English, some references have capitalized title words, not all species names are according to the contemporary nomenclature and in italics). Some journals are cited with abbreviated titles, some in full, as available in the source databases. These differences were left in the format of the database.

Yogic Cure of Autism

Human Immortality Part--3

CreateSpace Yoga believes that all diseases are caused by malfunction of nadis. Nadi purification is the top priority of yogic processes. After purification of Nadis or nerves:

1. The energy consumption of all systems and organs are reduced.
2. Cells have to work less and live longer.
3. Their transformation and trans-differentiation are increased.
4. Heart, lung, kidney, intestine which consume more energy, their energy consumption is reduced.
5. Neural energy generation is increased and neural cells get strengthened.
6. Same way all other cells of human body get strengthened.
7. Production of neural and other cells are increased and their weakening and deaths are reduced.
8. Energy is stored in our nerves which gives nerve power called body strength.
9. The renewal process of human body starts and you feel younger and younger every day.
10. Slowly by controlling brain, mind and its thoughts, the requirement of oxygen (breath) and protein (food) are reduced, generating same amount of energy as required by our body prior to this purification.
11. By controlling breath power yogis lastly control thoughts and attain Samadhi.
12. Our breathing and heartbeat is reduced and thereby the whole system is made to consume less energy and save more energy for cells, parts, organs and systems as well as neurons.
13. The protein and food consumption is also reduced.
14. The brain, mind and thought control is increased and one is able to control over one's ego, greed, anger and negate negative thoughts bringing positive thoughts.
15. It brings purity to our thoughts by energizing and activating pineal gland and one is able to think above one and is able to reach the astral plane.
16. Neural network of brain and peripheral system's functions are increased and consciousness is also increased by purification of limbic system and especially hypothalamus gland.
17. Our mental power is increased and all diseases of brain, mind and nadis throughout human body are cured.
18. One can reduce exhaling and keep prana inside as long as one desires thereby strengthening cells and neurons giving them more prana, the life force.
19. One should further know that as long as air is inside the body, thoughts are not generated by our mind, and yogis used this trick to control thoughts.
20. Brain becoming thoughtless, for more time can bring systems of human body to work less and consume less energy and bring cells and neurons to its old potentiality of stem cell.
21. More and more stem cells are generated because cells become calm.
22. Longevity of cells of neurons are increased and so the longevity of human.
23. Neurons are rejuvenated and so the brain decay is reduced and old age and disease of human is reduced and hence the death is avoided. A person becomes disease-free and 269 healthy.

Yogi's (Writer's) own experience: My experience is that the more you practice vastrika,

kapalbati and other pranayama and postures including bandhas and mudras, you reach more stability in breath and control of breathing is real yoga or meditation. Nadi suddhi is a long and difficult process. If one practices vastrika known as anulome- vilome 80 rounds of vastika four times a day ie.320 rounds a day for three months, one can attain nadi suddhi. This also was then, when oxygen percentage or prana in air was almost 40-50 percent. What are the effects of losing or reduced breathing? Losing breath means losing Prana. We know that after inhalation, oxygen (Prana) is diffused from alveoli into capillary because it is permeable to oxygen 5 % of oxygen is dissolved in plasma and rest 95% binds with red blood cells. Under different conditions of temperatures and pressures, being exerted on the cells, hemoglobin gives up the oxygen where it will diffuse the cells to be used for cellular respiration. Cellular respiration is the process moving energy from glucose into ATP. All cells use ATP for metabolic reaction. .

Modern Tongue Diagnostics in Chinese Medicine

This book is an introduction to diagnosis and treatment through looking at the tongue. Modern tongue diagnostics combines traditional Chinese medical tongue diagnostics with bio-holographic theory, using the holographic reflections on the tongue to diagnose disease, thereby improving the accuracy of the diagnosis in terms of what and where the illness is. This book introduces in detail the theory of the tongue midline as well as the positions where various organs are reflected on the tongue, as well as the appearances of the tongue corresponding to various pathological changes in these organs. This book is the first to publicize the author's many patented tongue diagnosis images, such as the panoramic hologram image which for the first time revealed the position and posture of the human body as it appears holographically on the tongue, the head and neck gland distribution image, the head and facial features map, and more. The author, aided by the experiences of previous scholars, discovered the position and posture of the human body as it appears holographically on the tongue. The holographic state of the human body as it appears on the tongue is in a prone position, that is, the head area is reflected at the tip of the tongue with the face facing forward, the legs and buttocks are reflected at the back of the tongue, and the four limbs are reflected in a bent position on the two sides of the tongue. The author has discovered how the glands of the head and neck are mapped on the tongue, especially the map of the thyroid gland on the tongue, refuting the common belief about how the thyroid gland is reflected on the tongue. Contrary to common belief, the thyroid gland is not reflected on the two sides of the cervical vertebrae reflection area on the tongue, but instead is on the two sides of the upper jiao area (the upper third of the tongue). The author has determined the areas of the tongue where various organs are reflected, as well as the changes in tongue appearance corresponding to the diseases in these organs. For example, heart disease is often reflected on the tongue as cracks or sunken areas in the heart reflection area of the tongue. In many years of clinical experience using tongue diagnostics, I have attempted to combine tongue diagnostics with herbal medicine and acupuncture, and have attained significant improvements in clinical efficacy, and have created a shortcut for accelerating diagnosis and improving efficacy. This book will mainly introduce diagnosis and differentiation based on the tongue with some case study.

Nature Helps...

How Plants and Other Organisms Contribute to Solve Health Problems

Springer Science & Business Media Nature helps... of course at first itself by developing measures that give bacteria, fungi, plants and animals a chance to be successful in their struggle for life. As a latecomer on Earth, Homo sapiens was gifted with some droplets of the divine spirit of recognition and thus became able to observe, to analyse and recombine skills of other living beings and to use them for his overwhelming career over the last 10,000 years. Of course fungi, plants, animals and even bacteria were primarily used by mankind as food or as lifestyle products such as beer, but soon it became clear that there was much more potential hidden in these organisms and that they could be used for other purposes, too. Extracts of plants and fungi were recognized as powerful remedies, as medicines, as insecticides or acarizides, as repellents against parasites or even as weapons, e.g. when poisonous compounds from frogs or plants were applied to arrowheads. Over the last 110 years the pharmaceutical industry has often simulated nature by analyzing complex organic substances taken from living organisms and then producing by synthesis absolutely pure compounds, which mostly consisted of only one single active substance. These products had the advantage of acting against precisely one target and thus produced fewer possible side effects than the complex plant extracts. However, the more serious side effect was that disease agents could develop resistances to pure medicinal products much more easily. Thus after 70 years of excellent prospects for chemotherapy, some dark clouds appeared and quickly gathered, so that several therapeutic remedies now no longer work. Therefore in many countries - especially in those where the pure chemotherapeutics are too expensive for the poor population - the cry "back to nature" is becoming louder and louder. This has led to an enormous increase of studies that again use natural extracts as remedies in the fight against diseases. The present book summarizes examples of promising aspects in a broad spectrum of applications and shows how extracts derived from bacteria, marine organisms, plants or even animals may help to treat infectious diseases, how such organisms may keep away parasites and pests from the bodies of plants or animals, including humans, and how they can be used directly to aid in diagnosis, promote wound healing and even to help catch criminals. These 15 chapters offer not only basic research on these different fields, but also show how useful and effective products can be developed from research.

Alcamo's Fundamentals of Microbiology

Body systems edition

Jones & Bartlett Publishers Ideal for allied health and pre-nursing students, Alcamo's Fundamentals of Microbiology: Body Systems, Second Edition, retains the engaging, student-friendly style and active learning approach for which award-winning author and educator Jeffrey Pommerville is known. Thoroughly revised and updated, the Second Edition presents diseases, complete with new content on recent discoveries, in a manner that is directly applicable to students and organized by body system. A captivating art program includes more than 150 newly added and revised figures and tables, while new feature boxes, Textbook Cases, serve to better illuminate key concepts. Pommerville's acclaimed learning design format enlightens and engages students right from the start, and new chapter conclusions round out each chapter, leaving readers with a clear understanding of key concepts.

Field Trials of Health Interventions

A Toolbox

Oxford University Press, USA Before new interventions can be used in disease control programmes, it is essential that they are carefully evaluated in "field trials", which may be complex and expensive undertakings. Descriptions of the detailed procedures and methods used in trials that have been conducted in the past have generally not been published. As a consequence, those planning such trials have few guidelines available and little access to previously accumulated knowledge. In this book the practical issues of trial design and conduct are discussed fully and in sufficient detail for the text to be used as a "toolbox" by field investigators. The toolbox has now been extensively tested through use of the first two editions and this third edition is a comprehensive revision, incorporating the many developments that have taken place with respect to trials since 1996 and involving more than 30 contributors. Most of the chapters have been extensively revised and 7 new chapters have been added.

Bernard Mandeville: A Treatise of the Hypochondriack and Hysterick Diseases (1730)

Springer This work reflects on hypochondria as well as on the global functioning of the human mind and on the place of the patient/physician relationship in the wider organisation of society. First published in 1711, revised and enlarged in 1730, and now edited and published with a critical apparatus for the first time, this is a major work in the history of medical literature as well as a complex literary creation. Composed of three dialogues between a physician and two of his patients, Mandeville's Treatise mirrors the digressive structure of a talking cure. Thanks to the soothing and enlightening effects of this casual conversation, the physician Mandeville demonstrates the healing power of words for a class of patients that he presents as men of learning who need above all to be addressed in their own language. Mandeville's aim was to delineate his own cure for hypochondria and hysteria, which consisted of a talking cure followed by diet and exercise, but also to discuss the practice of medicine in England and continental Europe at a time when physicians were beginning to lose ground to apothecaries. Opposing a purely theoretical approach to medicine, Mandeville takes up the principles presented by Francis Bacon, Thomas Sydenham, and Giorgio Baglivi, and advocates a medical practice based on experience and backed up by time-tested theories.

Nutrition in the Prevention and Treatment of Abdominal

Obesity

Elsevier Nutrition in the Prevention and Treatment of Abdominal Obesity focuses on the important roles that exercise, dietary changes, and foods play in promoting as well as reducing visceral fat. Nutritionists, dieticians, and healthcare providers seeking to address the abdominal obesity epidemic will use this comprehensive resource as a tool in their long-term goal of preventing chronic diseases, especially heart, vascular, and diabetic diseases. Experts from a broad range of disciplines are involved in dealing with the consequences of excessive abdominal fat: cardiology, diabetes research, studies of lipids, endocrinology and metabolism, nutrition, obesity, and exercise physiology. They have contributed chapters that define a range of dietary approaches to reducing risk and associated chronic diseases. They begin by defining visceral obesity and its major outcomes; they also discuss the importance and the challenges of dietary approaches to reduce abdominal obesity, as compared to clinical approaches, with major costs and risks. Offers detailed, well-documented reviews outlining the various dietary approaches to visceral obesity with their benefits and failures Includes chapters on types of foods, exercise, and supplements in reducing obesity and its chronic clinical companions, especially diabetes and cardiovascular disease Helps nutritionists, dieticians, and healthcare providers approach patients in making decision about nutritional therapies and clinical treatments for abdominal obesity, from an evidence-based perspective

Pharmaceutical Patents in Europe

Martinus Nijhoff Publishers The pharmaceutical industry and patent legislation are inextricably linked. Pharmaceutical companies could not exist without some guarantee that they can recoup the cost of developing a new product. European patent law offers this opportunity, as it allows companies to exclude competition for a specific product for a fixed time scale. In "Pharmaceutical Patents in Europe" the current legal patent situation is examined by a detailed analysis of case law from the European Patent Office (EPO), the international body created with the signing of the European Patent Convention (EPC). Aspects of European patent law not primarily regulated in the EPC, for example Supplementary Protection Certificates and infringement matters, are examined in the setting provided by EC law and domestic laws of European states. This book is written for the reader who understands the main characteristics of patent law and is looking for a practitioner's text on the European pharmaceutical patent law scene. Moreover, the author's remarks can help all readers to look at the field with fresh eyes.
