MAINTENANCE, TROUBLESHOOTING AND REPAIR

Adlard Coles Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

DELTA: AN EXPERT SYSTEM FOR DIESEL ELECTRIC LOCOMOTIVE REPAIR

In recent years, expert systems have become the most visible and the fastest growing branch of Artificial Intelligence. General Electric Company's Corporate Research and Development has applied expert system technology to the problem of troubleshooting and the repair of diesel electric locomotives in railroad running repair shops. The expert system uses production rules and an inference engine that can diagnose multiple problems with the locomotive and can suggest repair procedures to maintenance personnel. A prototype system has been implemented in FORTH, running on a Digital Equipment PDP 11/23 under RSX-11M. This system contains approximately 530 rules (roughly 330 rules for the Troubleshooting System, and 200 rules for the Help System), partially representing the knowledge of a Senior Field Service Engineer. The inference engine uses a mixed-mode configuration, capable of running in either the forward or backward mode. The Help System can provide the operator with assistance by displaying textual information, CAD diagrams or repair sequences from a video disk. The rules are written in a representation language consisting of nine predicate functions, eight verbs, and five utility functions. The first field prototype expert system, designated was delivered in July 1983 and is currently under field evaluation.

ADLARD COLES BOOK OF DIESEL ENGINES

Bloomsbury Publishing The Adlard Coles Book of Diesel Engines is aimed at boatowners rather than experienced mechanics. In clear, jargon-free English it explains how a diesel engine works, how to look after it, and takes into account developments in engine technology. The book explains how the engine uses simple processes to convert fuel to power, and then looks at the various sub-systems that allow those processes to take place. She also advises on tools, winterizing and provides hints, tips and helpful fault-finding tables. Systems covered include: fuel, air, cooling, oil, electrical, propeller and transmission and control. This fifth edition has been thoroughly updated and illustrated with new full-colour photos and diagrams. In particular the Common Rail Injection System is covered, which governs how the fuel system is constructed, combined with the use of electronics (as opposed to mechanics) to control it thereby meeting the need for cleaner, greener engines to meet emissions regulations. 'Strongly recommended for anyone who has anything to do with the diesel engine' Nautical Magazine 'A winner' Classic Boat 'The next best thing to taking the course itself' Motor Boats Monthly
