MANUAL OF I. V. THERAPEUTICS - TEACHER'S EDITION

F A Davis Company

AN INTRODUCTION TO COMMUNITY DEVELOPMENT

Routledge *Beginning with the foundations of community development, An Introduction to Community Development offers a comprehensive and practical approach to planning for communities. Road-tested in the authors' own teaching, and through the training they provide for practicing planners, it enables students to begin making connections between academic study and practical know-how from both private and public sector contexts. An Introduction to Community Development shows how planners can utilize local economic interests and integrate finance and marketing considerations into their strategy. Most importantly, the book is strongly focused on outcomes, encouraging students to ask: what is best practice when it comes to planning for communities, and how do we accurately measure the results of planning practice? This newly revised and updated edition includes: increased coverage of sustainability issues, discussion of localism and its relation to community development, quality of life, community well-being and public health considerations, and content on local food systems. Each chapter provides a range of reading materials for the student, supplemented with text boxes, a chapter outline, keywords, and reference lists, and new skills based exercises at the end of each chapter to help students turn their learning into action, making this the most user-friendly text for community development now available.*

DRAMA WITH CHILDREN

Oxford University Press *This book introduces drama activities to children, including role play, mime, chants, puppets and short plays.*

MRI FROM PICTURE TO PROTON

Cambridge University Press *MRI from Picture to Proton presents the basics of MR practice and theory in a unique way: backwards! The subject is approached just as a new MR practitioner would encounter MRI: starting from the images, equipment and scanning protocols, rather than pages of physics theory. The reader is brought face-to-face with issues pertinent to practice immediately, filling in the theoretical background as their experience of scanning grows. Key ideas are introduced in an intuitive manner which is faithful to the underlying physics but avoids the need for difficult or distracting mathematics. Additional explanations for the more technically inquisitive are given in optional secondary text boxes. The new edition is fully up-dated to reflect the most recent advances, and includes a new chapter on parallel imaging. Informal in style and informed in content, written by recognized effective communicators of MR, this is an essential text for the student of MR.*

START-UP NATION

THE STORY OF ISRAEL'S ECONOMIC MIRACLE

Hachette UK What the world can learn from Israel's meteoric economic success. Start-Up Nation addresses the trillion dollar question: How is it that Israel -- a country of 7.1 million, only 60 years old, surrounded by enemies, in a constant state of war since its founding, with no natural resources-- produces more start-up companies than large, peaceful, and stable nations like Japan, China, India, Korea, Canada and the UK? With the savvy of foreign policy insiders, Senor and Singer examine the lessons of the country's adversity-driven culture, which flattens hierarchy and elevates informality-- all backed

up by government policies focused on innovation. In a world where economies as diverse as Ireland, Singapore and Dubai have tried to re-create the "Israel effect", there are entrepreneurial lessons well worth noting. As America reboots its own economy and can-do spirit, there's never been a better time to look at this remarkable and resilient nation for some impressive, surprising clues.

ARTIFICIAL HELLS

PARTICIPATORY ART AND THE POLITICS OF SPECTATORSHIP

Verso Books Since the 1990s, critics and curators have broadly accepted the notion that participatory art is the ultimate political art: that by encouraging an audience to take part an artist can promote new emancipatory social relations. Around the world, the champions of this form of expression are numerous, ranging from art historians such as Grant Kester, curators such as Nicolas Bourriaud and Nato Thompson, to performance theorists such as Shannon Jackson. *Artificial Hells* is the first historical and theoretical overview of socially engaged participatory art, known in the US as "social practice." Claire Bishop follows the trajectory of twentieth-century art and examines key moments in the development of a participatory aesthetic. This itinerary takes in Futurism and Dada; the Situationist International; Happenings in Eastern Europe, Argentina and Paris; the 1970s Community Arts Movement; and the Artists Placement Group. It concludes with a discussion of long-term educational projects by contemporary artists such as Thomas Hirschhorn, Tania Bruguera, Paweł Althamer and Paul Chan. Since her controversial essay in *Artforum* in 2006, Claire Bishop has been one of the few to challenge the political and aesthetic ambitions of participatory art. In *Artificial Hells*, she not only scrutinizes the emancipatory claims made for these projects, but also provides an alternative to the ethical (rather than artistic) criteria invited by such artworks. *Artificial Hells* calls for a less prescriptive approach to art and politics, and for more compelling, troubling and bolder forms of participatory art and criticism.

THE CIVIL CONTRACT OF PHOTOGRAPHY

Princeton University Press In this groundbreaking work, Ariella Azoulay thoroughly revises our understanding of the ethical status of photography. It must, she insists, be understood in its inseparability from the many catastrophes of recent history. She argues that photography is a particular set of relations between individuals and the powers that govern them and, at the same time, a form of relations among equals that constrains that power. Anyone, even a stateless person, who addresses others through photographs or occupies the position of a photograph's addressee, is or can become a member of the citizenry of photography. The crucial arguments of the book concern two groups that have been rendered invisible by their state of exception: the Palestinian noncitizens of Israel and women in Western societies. Azoulay's leading question is: Under what legal, political, or cultural conditions does it become possible to see and show disaster that befalls those with flawed citizenship in a state of exception? *The Civil Contract of Photography* is an essential work for anyone seeking to understand the disasters of recent history and the consequences of how they and their victims are represented.

VISUALIZATION IN MATHEMATICS, READING AND SCIENCE EDUCATION

Springer Science & Business Media Science education at school level worldwide faces three perennial problems that have become more pressing of late. These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students. The first problem is the increasing intellectual isolation of science from the other subjects in the school curriculum. Science is too often still taught didactically as a collection of pre-determined truths about which there can be no dispute. As a consequence, many students do not feel any "ownership" of these ideas. Most other school subjects do somewhat better in these regards. For example, in language classes, students suggest different interpretations of a text and then debate the relative merits of the cases being put forward. Moreover, ideas that are of use in science are presented to students elsewhere and then re-taught, often using different terminology, in science. For example, algebra is taught in terms of "x, y, z" in mathematics classes, but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics, where "p, v, t" are used. The result is that students are confused and too often alienated, leading to their failure to achieve that "extraction of an education from a scheme of instruction" which Jerome Bruner thought so highly desirable.

THE CAMBRIDGE HANDBOOK OF SOCIOLINGUISTICS

Cambridge University Press The most comprehensive overview available, this Handbook is an essential guide to sociolinguistics today. Reflecting the breadth of research in the field, it surveys a range of topics and approaches in the study of language variation and use in society. As well as linguistic perspectives, the handbook includes insights from anthropology, social psychology, the study of discourse and power, conversation analysis, theories of style and styling, language contact and applied sociolinguistics. Language practices seem to have reached new levels since the communications revolution of the late twentieth century. At the same time face-to-face communication is still the main force of language identity, even if social and peer networks of the traditional face-to-face nature are facing stiff competition of the Facebook-to-Facebook sort. The most authoritative guide to the state of the field, this handbook shows that sociolinguistics provides us with the best tools for understanding our unfolding evolution as social beings.

DESIGN ACTIVISM

BEAUTIFUL STRANGENESS FOR A SUSTAINABLE WORLD

Routledge Design academics and practitioners are facing a multiplicity of challenges in a dynamic, complex, world moving faster than the current design paradigm which is largely tied to the values and imperatives of commercial enterprise. Current education and practice need to evolve to ensure that the discipline of design meets sustainability drivers and equips students, teachers and professionals for the near-future. New approaches, methods and tools are urgently required as sustainability expands the context for design and what it means to be a 'designer'. Design activists, who comprise a diverse range of designers, teachers and other actors, are setting new ambitions for design. They seek to fundamentally challenge how, where and when design can catalyse positive impacts to address sustainability. They are also challenging who can utilise the power of the design process. To date, examination of contemporary and emergent design activism is poorly represented in the literature. This book will provide a rigorous exploration of design activism that will re-vitalise the design debate and provide a solid platform for students, teachers, design professionals and other disciplines interested in transformative (design) activism. Design Activism provides a comprehensive study of contemporary and emergent design activism. This activism has a dual aim - to make positive impacts towards more sustainable ways of living and working; and to challenge and reinvigorate design praxis. It will collate, synthesise and analyse design activist approaches, processes, methods, tools and inspirational examples/outcomes from disparate sources and, in doing so, will create a specific canon of work to illuminate contemporary design discourse. Design Activism reveals the power of design for positive social and environmental change, design with a central activist role in the sustainability challenge. Inspired by past design activists and set against the context of global-local tensions, expressions of design activism are mapped. The nature of contemporary design activism is explored, from individual/collective action to the infrastructure that supports it generating powerful participatory design approaches, a diverse toolbox and inspirational outcomes. This is design as a political and social act, design to enable adaptive societal capacity for co-futuring.

LETTERS TO YOUNG CHURCHES

A TRANSLATION OF THE NEW TESTAMENT EPISTLES

THE SOCIAL CONSTRUCTION OF TECHNOLOGICAL SYSTEMS, ANNIVERSARY EDITION

NEW DIRECTIONS IN THE SOCIOLOGY AND HISTORY OF TECHNOLOGY

MIT Press An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science, technology, and society. This pioneering book, first published in 1987, launched the new field of social studies of technology. It introduced a method of inquiry—social construction of technology, or SCOT—that became a key part of the wider discipline of science and technology studies. The book helped the MIT Press shape its STS list and inspired the Inside Technology series. The thirteen essays in the book tell stories about such varied technologies as thirteenth-century galleys, eighteenth-century cooking stoves, and twentieth-century missile systems. Taken together, they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical, social, economic, and political questions, and they demonstrate the illuminating effects of the integration of empirics and theory. The approaches in this volume—collectively called SCOT (after the volume's title) have since broadened their scope, and twenty-five years after the publication of this book, it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way.

PRINCIPLES ON CLIMATE OBLIGATIONS OF ENTERPRISES

Climate change is the most important challenge humankind has ever faced. It is commonly accepted that GHG emissions must be reduced at great pace and to a significant extent to keep global warming below 2 (or, preferably, 1.5) degrees Celsius. This can only be reached if the obligations of major players—States, enterprises and investors—are sufficiently clear. The Oslo Principles aim to discern the legal obligations of States. The current Principles focus on the obligations of enterprises and investors. They identify the reduction obligations of enterprises, and articulate a series of related obligations. Investors can—and many already do—play an important role. These Principles aim to provide a legal basis for active investment management and engagement geared at stimulating enterprises to comply with their legal obligations. An extensive commentary further explains the Principles and their legal underpinning. The members of the expert group are Thomas Pogge, Brian Preston, Tianbao Qin, James Silk, Jaap Spier (reporter), Elisabeth Steiner, Philip Sutherland, and Daniël Witte. LEARNING HOW TO ASK

A SOCIOLINGUISTIC APPRAISAL OF THE ROLE OF THE INTERVIEW IN SOCIAL SCIENCE RESEARCH

Cambridge University Press Interviews are ubiquitous in modern society, and they play a crucial role in social scientific research. But, as Charles Briggs convincingly argues in this book, received interviewing techniques rest on fundamental misapprehensions about the nature both of the interview as a communicative event, and of the nature of the data that it produces. Furthermore, interviewers rarely examine the compatibility of interviews as a means of acquiring information to one another. These oversights often blind interviewers to ensuing errors of interpretation, as well as to the limitations of the interview as a means of acquiring data. To conflict these problems, Professor Briggs presents an analysis of the 'communicative blunders' that he himself committed in conducting research interviews among Spanish-speakers in northern New Mexico. By focusing on these errors and exploring how they may be avoided, he is able to propose new techniques for designing, implementing, and analyzing interview-based research. These rest on identifying the subjects' resources for conveying information, and the relative compatibility of the shared rules and understandings that underlie their strategies with those associated with interviews. Critical of existing paradigms of interviewing, which he sees as deriving from Western 'folk' theories of reality and communication, Briggs shows that the development of more sophisticated interviewing methodologies requires further research into interviewing itself. Briggs's conclusions provide a basis for the reexamination of current uses of interviews in a wide range of contexts - from social science research to job applications, welfare and health care delivery, criminal and legal investigations, journalism and broadcasting, and other areas of everyday life. His book will appeal to linguists, sociologists, anthropologists, historians, psychologists, as well as other readers whose research or professional activities depend on the use of interviews.

TELEVISION, NATION, AND CULTURE IN INDONESIA

Ohio University Press *The culture of television in Indonesia began with its establishment in 1962 as a public broadcasting service. From that time, through the deregulation of television broadcasting in 1990 and the establishment of commercial channels, television can be understood, Philip Kitley argues, as a part of the New Order's national culture project, designed to legitimate an idealized Indonesian national cultural identity. But Professor Kitley suggests that it also has become a site for the contestation of elements of the New Order's cultural policies. Based on his studies, he further speculates on the increasingly significant role that television is destined to play as a site of cultural and political struggle.*

ACTIONABLE AGILE METRICS FOR PREDICTABILITY

AN INTRODUCTION

"When will it be done?" That is probably the first question your customers ask you once you start working on something for them. Think about how many times you have been asked that question. How many times have you ever actually been right? We can debate all we want whether this is a fair question to ask given the tremendous amount of uncertainty in knowledge work, but the truth of the matter is that our customers are going to inquire about completion time whether we like it or not. Which means we need to come up with an accurate way to answer them. The problem is that the forecasting tools that we currently utilize have made us ill-equipped to provide accurate answers to reasonable customer questions. Until now. Topics Include Why managing for flow is the best strategy for predictability-including an introduction to Little's Law and its implications for flow. A definition of the basic metrics of flow and how to properly visualize those metrics in analytics like Cumulative Flow Diagrams and Scatterplots. Why your process policies are the potentially the biggest reason that you are unpredictable.
